Painting with starlight : optical techniques for the high-contrast imaging of exoplanets

Wilby, M.J.

Author: Wilby, M.J.
Title: Painting with starlight : optical techniques for the high-contrast imaging of exoplanets
Issue Date: 2018-11-27

Painting with Starlight

Optical techniques for the high-contrast imaging of exoplanets

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 27 november 2018
klokke 12.30 uur

door

Michael James Wilby

geboren te
Hemel Hempstead, Verenigd Koninkrijk
in 1992

Promotor:	Prof. dr. Christoph Keller	
Co-promotor:	Dr. Matthew Kenworthy	
Promotiecommissie:	Prof. dr. Huub Röttgering	Universiteit Leiden (Sterrewacht)
	Prof. dr. Ignas Snellen	Universiteit Leiden (Sterrewacht)
	Prof. dr. Wolfgang Osten	Universität Stuttgart, Deutschland
	Dr. Silvania Pereira	Technische Universiteit Delft
	Prof. dr. Martin van Exter	Universiteit Leiden (LION)

ISBN: 978-94-028-1261-9

Contents

1 Introduction **1**
1.1 Detecting and characterising exoplanets 2
1.1.1 Overview of exoplanet detection techniques 2
1.1.2 From detection to characterisation 4
1.2 Planet formation 7
1.2.1 The planet-disk connection 7
1.2.2 Observational challenges to current planet formation theory . . 9
1.2.3 Observing proto-planetary disks 10
1.3 Direct imaging of exoplanets 11
1.3.1 Challenges and rewards 11
1.3.2 Current state of the field 13
1.3.3 Outlook for next-generation instrumentation 13
1.4 The high-contrast imager's toolbox 16
1.4.1 Coronagraphy 16
1.4.2 Adaptive optics 18
1.4.3 Image post-processing algorithms 20
1.4.4 Polarimetry 22
1.4.5 Spectroscopy 24
1.5 This thesis: Focal-plane wavefront sensing techniques 25
1.5.1 Holographic wavefront sensing 26
1.5.2 Phase diversity wavefront sensing 30
1.6 Thesis outline 31

2 The coronagraphic Modal Wavefront Sensor: A hybrid focal-plane sensor for the high-contrast imaging of circumstellar environments **33**
2.1 Introduction 34
2.1.1 Scientific motivation 34
2.1.2 Holographic optics for focal-plane wavefront sensing 35
2.1.3 Content of paper 36
2.2 Theory 36
2.2.1 The Holographic Modal Wavefront Sensor 36
2.2.2 Combination with an Apodizing Phase Plate coronagraph 41
2.2.3 Impact of multiplexing on mutual performance 41
2.2.4 Impact of structured telescope apertures 43
2.3 Idealised performance simulations 44
2.4 On-sky demonstration 47
2.4.1 Instrument design 47
2.4.2 Characterising HMWS on-sky response 49
2.4.3 Broadband wavefront sensing 52
2.4.4 Real-time atmospheric wavefront measurements 52
2.5 Discussion & conclusions 56

3 A ‘Fast & Furious’ solution to the low-wind effect for SPHERE at the VLT 59

3.1 Introduction . . . 60
3.1.1 The low-wind effect . . . 60
3.1.2 Proposal: Focal-plane wavefront sensing using the SPHERE DTTS 62
3.2 The Fast & Furious algorithm . . . 63
3.3 Simulating F&F performance in SPHERE . . . 66
3.3.1 Simulation parameters . . . 66
3.3.2 Simulation results . . . 68
3.4 Discussion . . . 71
3.5 Conclusions . . . 72

4 Laboratory verification of ‘Fast & Furious’ phase diversity: Towards controlling the low-wind effect in the SPHERE instrument 75

4.1 Introduction . . . 76
4.2 Methodology . . . 80
4.2.1 The Fast & Furious algorithm . . . 80
4.2.2 Implementing F&F in SPHERE-like simulations . . . 82
4.2.3 Laboratory verification of F&F on the MITHIC bench . . . 84
4.3 Results . . . 86
4.3.1 Comparison of MITHIC bench and simulation results . . . 86
4.3.2 Simulated low-S/N performance of F&F . . . 92
4.4 Discussion . . . 94
4.5 Conclusions . . . 98

5 These are not the voids you’re looking for: Using Ceres to calibrate SPHERE-IRDIS coronagraphic DPI observations of TW Hydrae 101

5.1 Introduction . . . 102
5.2 Ceres observations and data reduction . . . 103
5.2.1 Observations . . . 103
5.2.2 Data reduction . . . 104
5.2.3 Analysis . . . 106
5.3 Modelling the SPHERE ALC Coronagraph System . . . 108
5.3.1 Description of the coronagraphic system model . . . 108
5.3.2 Diffraction-limited model . . . 109
5.3.3 Effects of residual atmospheric turbulence . . . 111
5.3.4 Additional considerations . . . 114
5.4 Calibrating Protoplanetary Disk Observations . . . 118
5.4.1 Polarimetric image formation and instrumental polarisation . . 118
5.4.2 Convolutional depolarisation: an additional consideration for DPI-mode observations . . . 119
5.4.3 A recipe for disk calibration . . . 121
5.5 TW Hydrae: calibration of a real disk observation . . . 122
5.5.1 Background and observations . . . 122
5.5.2 A simple forward model of the TW Hydrae disk . . . 123
5.5.3 Assessing the accuracy of ALC extinction calibration by normalisation . . . 127
5.6 Conclusions . . . 129

Bibliography **132**

List of Abbreviations **141**

6 Nederlandse Samenvatting **145**
6.1 Hoe vinden we exoplaneten? 145
6.1.1 Indirecte detectie methodes 145
6.1.2 Directe detectie 146
6.2 Hoe characteriseren we exoplaneten? 146
6.3 Protoplanetaire schijven en planeet formatie 147
6.4 Dit proefschrift 148
6.5 Algemene conclusies 150

7 English Summary **151**
7.1 How do we find exoplanets? 151
7.1.1 Indirect detection methods 151
7.1.2 Direct imaging 151
7.2 How do we characterise exoplanets? 152
7.3 Protoplanetary disks and planet formation 153
7.4 This thesis 154
7.5 Overall conclusions 155
