TW Elffers was supported by a grant of the Board of Directors of the Leiden University Medical Center. Financial support from the Netherlands Association for the Study of Obesity (NASO) is greatly acknowledged. Financial support by the Dutch Heart Foundation for the publication of this thesis is gratefully acknowledged. The research described in this thesis was supported by a grant of the Dutch Heart Foundation (CVON2014-02 ENERGISE).

The work described in this thesis was performed at the Department of Cardiology and the Department of Clinical Epidemiology of the Leiden University Medical Center, the Netherlands.

## TABLE OF CONTENTS

Chapter 1	Introduction	7
Chapter 2	Body fat distribution, in particular visceral fat, is associated with cardiometabolic risk factors in obese women.	21
Chapter 3	Association of metabolic syndrome and electrocardiographic markers of subclinical cardiovascular disease	37
Chapter 4	Relation of Overall and Abdominal Adiposity with Electrocardiogram Parameters of Subclinical Cardiovascular Disease in Individuals Aged 45 to 65 Years (From the Netherlands Epidemiology of Obesity Study)	55
Chapter 5	Borderline Q-waves in individuals without overt cardiovascular disease: relations with adiposity, subclinical atherosclerosis and vascular stiffness	75
Chapter 6	Carotid intima media thickness, pulse wave velocity and the spatial QRS-T angle	93
Chapter 7	Improvement of electrocardiographic detection of left ventricular hypertrophy by body mass index and spatial QRS-T angle	107
Chapter 8	General discussion	125
Appendices	Nederlandse samenvatting (Summary in Dutch)	138
	Dankwoord (Acknowledgements)	143
	Curriculum Vitae	144
	List of Publications	145
