Title: Interplay between cancer and thrombosis; identification of key factors

Issue Date: 2019-01-29

**Interplay between cancer and thrombosis;
identification of key factors**

Betül Ünlü

The research described in this thesis was funded by the Netherlands Organization for Scientific Research (grant 17.106.329), Worldwide Cancer Research (WWCR15-1186), Dutch Cancer Society (UL 2015-7594) and by the Den Dulk Moermans Fonds from the Leiden University Medical Center.

The research was performed at the Eindhoven Laboratory for Experimental Vascular Medicine, Department of Internal Medicine, Leiden University Medical Center, Leiden, The Netherlands.

CONTENT

Chapter 1	9
General introduction	
Part I	
Chapter 2	17
Interplay between alternatively spliced Tissue Factor and full-length Tissue Factor in modulating coagulant activity of endothelial cells	
Part II	
Chapter 3	37
Effects of tumor expressed coagulation factors on cancer progression and venous thrombosis: is there a key factor?	
Chapter 4	61
Integrin regulation by Tissue Factor promotes cancer stemness and metastasis in breast cancer	
Part III	
Chapter 5	91
Development of a spontaneous model for cancer associated thrombosis	
Chapter 6	105
Genes associated with venous thromboembolism in colorectal cancer patients	

Chapter 7	125
Cancer-associated thrombosis: the search for the Holy Grail continues	
Chapter 8	143
General discussion and summary	
Chapter 9	159
Nederlandse discussie en samenvatting	
Publications	171
