If we compare the grid made on the ancient papyrus with the Excel page, a modern spreadsheet for calculation and organisation of data, we can see many similarities. The space is divided into grids by means of columns and lines and usually headings are written at top of the page in order to organise the information.....	114

Fig. 43 Chart representing distribution in time of journals written on ostraca vs journals written on papyri (only documents dated with certainty). Considering what was stated on p. 28, that 40% of the papyri is palimpsest, we can imagine that papyri with records now dated to R. IX, X or XI earlier may have carried records dating to R. VI, VII or VIII. This would change the picture of the chart.	213
