## 5. List of Necropolis journals from Deir el-Medina

### 5.1 The creation of the list: criteria

Genre classification amongst the mass of administrative texts produced in the Deir el-Medina community during the Ramesside period constitutes a tough matter. The diversity of texts, including accounts, lists and a variety of dated notes, makes it complicated to distinguish clearly and outline what a journal would or should have looked like. Some texts can be clearly defined, like letters, oracles, oaths, hymns, while others, belonging to the large group of administrative documents, are less clearly identifiable<sup>161</sup>. Primary among those are journals. Such a difficulty was certainly also encountered in compiling the impressive Deir el-Medina Database, where documents very similar in contents and format (deliveries of firewood or lamps, for example), are sometimes called *journal* and in other instances *account list*, confirming the huge complexity of a genre classification amongst these documents.

In the introduction of the present study, we outlined how previous works approached and discussed the problem concerning the definition of the genre. Now, the criteria used in this work to define what a Necropolis journal is must be set out. How can we distinguish such documents from others? After looking at the collection of material in the previous chapter, especially the day-to-day records of the Old, Middle and New Kingdom, and after observing the shared features with Necropolis journals, we want to formulate the guidelines which will allow us to create a list of criteria to select the material for this study and thus identify a document as journal.

The following documents are those called at the end of the previous chapter '**event journals**' and therefore share most of the similarities with our Deir el-Medina journal.

The oldest administrative papyri so far discovered, those of Wadi el-Jarf, provide a very interesting set of documents. We see meticulous accounts organized in monthly tables and a detailed ships' log for every working day recording the daily activities and events of a team commissioned to build the funerary monument of king Cheops. The use of the infinitive verbal form immediately after the date, the concise style and the chronologically organized notes, are features shared with the Deir el-Medina texts, even if here the information is organized in columns and not in lines.

Texts recording the activities of a crew of workmen involved in a construction project of a temple, a tomb, etc., obviously provide the closest features comparable with Deir el-Medina journals dealing with the activities concerning the construction of the royal

---

<sup>161</sup> See here introduction to chapter 2 and Donker van Heel-Haring 2003, 85-123, for a classification according to Egyptian text denominatives.

tombs. These texts present dated records keeping track of the number of workdays, and others recording deliveries of food to the team with the totals and the remainders. The notes produced are organized chronologically and written in short columns (or grid for the oldest documents). Papyri JE 52002, JE 52003, JE 52004 and MMA 3569 + Vienna 3934/3937 + 9352, in particular, concerning the notes of a private tomb construction project at Saqqara, show close similarities to the subject of this thesis. The papyri were in fact drawn up by a scribe responsible for the construction of the funeral monument for a high functionary. The text contains the daily notes (covering about eight months) of the construction project, recording everything from the scribe's arrival on the site and his delivery of the necessary documents and permits, to his assembly of a crew of workers, and then the ongoing work.

The border journal (Semna Dispatches) and the ship's logs (Wadi el-Jarf Papyri, P. Leiden I 350 verso and P. Turin 2008+2016) are also closely similar in many respects to our Necropolis records, especially to those written on papyri<sup>162</sup>. The Semna Dispatches consist of a daybook roll recording events that took place over a period of three weeks, mainly concerned with tracking the movement of people; the ship's log record the daily notes about the events aboard a ship, the transport of different kinds of goods, and crew rations. Papyrus Turin 2008+2016 contains a list of the cargo and a day-by-day log, noting the progress of the boat since its departure. The Leiden papyrus records the collection and distribution of daily rations of food to the crew of the ship.

Before providing criteria for selection in order to compile a list of Deir el-Medina journals, we want to illustrate which kind of texts the large group of administrative documents discovered in Deir el-Medina include. As we said, **Necropolis journal should present a series of day-to-day entries recording events**, which is 'event journal' (see Introduction: *the* Necropolis Journal -with the article *the*- is a label put on certain documents by Egyptologists since 1928 and this is undeniably a form of event journal). Nonetheless there are other texts which are also journals, i.e. recording day-to-day notes. Even though there seem to be no distinctive terms, there are at least clearly two types: 'account journals' and 'event journals'. In the first, the focus is on deliveries and accounts, in the second the focus is on events, movements, work (both are found already among the Wadi el-Jarf papyri, see above); of course slight overlaps can be expected.

---

<sup>162</sup> Not included in the overview of the previous chapter because still awaiting publication, but worth to be mentioned, is Papyrus Turin 2098+2100/306 verso, a Late Ramesside ship's log containing a series of day-book notes recording a journey to Middle Egypt by the Necropolis scribe Dhutmose (Demarée conference in Liège, October 2014, forthcoming).

Now first we will discuss three types of journals that are not event journals, and are therefore not included in the list 5.2:

- **Account journals** (see point e below): records containing mainly dated lists of goods or detailed ration distributions, but without any further information on activities/events. Most probably, some of these were used to fill some data in the event journals, like probably O. Cairo CG 25799, O. Cairo CG 25719 + O. KV 47/182, O. DM 257, O. Gardiner AG 95 (very small) and O. BM EA 66412 (= O.Zouche H 6)<sup>163</sup>. They all record deliveries and therefore will not be included here, but they deserve to be mentioned since they all seem to have lines of texts that also appear in P. Greg (from year 5 and 6 of Sethi II) and therefore look like possible preliminary account notes used sometimes later for inclusion in a journal.
- **Day notes.** When only one date is preserved on a document, the choice is extremely subjective. As an example, O. Cairo 25581 of year 2 of Merenptah II *3h.t* day 30, is, in our opinion, part of an event journal. It records the work done in the royal tomb and lists the craftsmen to be brought to the village in order to prepare the great place of Pharaoh and it might be one note from a longer list. A similar case is O. Cairo 25645 dated to Ramesses II. Alternatively, O. DM 1-18 and related ostraca from the reign of Seti I (O DM 22-24, O. DM 28, O. Demarée H 5-7, O. Ashmolean Museum 43, O. Or. Inst. 18878), also mostly registering one date only, will not be included since they merely briefly list deliveries of pottery, firewood or dung and therefore belong to the type 'account journal'. (see further point e below).

-The corpus of texts presenting **workmen's marks**, thoroughly studied by Soliman (Soliman, D. M., unpublished PhD Thesis 2016). These contain partly dated lists of people and partly accounts.

Based on the discussions in the previous paragraphs there now follows a list of criteria applied to include/exclude documents in/from the list in 5.2.

---

<sup>163</sup> The Basel expedition working in the Valley of Kings found more fragments of similar texts; all together they form a kind of small dossier of such account or delivery texts from years 5 and 6, almost certainly used as notes to be included in a journal: i.a., O.Cairo 25641 is completed by a fragment 166 with dates from year 6 II *3h.t* day 4 and Cairo 25719 is completed by a fragment 182 with dates from year 6 I *pr.t* day 12. The study is unfortunately still unpublished and the documents are therefore not available (the contribution of Cilli 2014 is only an overview of her PhD thesis, without a detailed study of the specific documents).

**CRITERIA FOR THE INCLUSION/EXCLUSION OF A TEXT:**Layout and style

- a. The most important criterion, without which, in our opinion, one cannot refer to a(n event) journal, is that the collection of entries has to be **ordered following calendrical notations, usually in their chronological order**, showing that the intention was to produce a daybook. A **general day-by-day** organization of the notes is expected, but not necessarily strictly consecutive.
- b. The style has to be **concise**, with brief sentences, headings and titles for the sections, and **recurrent formulas** and terms (see p. 112 for a list of the most common terms). Immediately after the date (year, month and day) follows a **verbal construction**, usually a narrative infinitive. The date is related to an event, **an action**, which is directly noted at the beginning of the sentence.

Content

- c. The document has to record events, **a series of daily activities** connected with or concerning the workmen or artisan community of Deir el-Medina and their construction work for the tomb of Pharaoh.
- d. Guard duty rosters or turnus lists (*wrs*) are features characteristic of many event journals texts (not of all), and consist in the indication, mostly immediately after the date, of the name of the workman who was responsible for the receipt of certain supplies on that particular day<sup>164</sup>.
- e. Lists with dates but recording mostly only deliveries.

Dated documents containing detailed information on rations distributions or only mere account lists of goods (lamps, firewood, plaster, fish, beer, natron, dung, etc.), but without any further information about the activities of the day, will not be considered journals (see below for examples). When a brief account list is part of a more extensive text, containing notes on daily activities, the text is then considered an event journal. The same applies to those texts mentioning simply the actual grain rations deliveries ("salary" payments) within a wider context.

---

<sup>164</sup> Janssen 1997, 91-94 and Collier 2004.

f. A special word must be devoted to the absence lists with dates. They certainly constitute a particular case, since they include events, even though only in the form of reasons for the absence (O. BM EA 5634 dated to Ramesses II is a list of absences, but it is a summary, organized according to names and not to calendar dates, and is therefore not considered a journal here<sup>165</sup>).

The selection of documents included in the following list is, however, open for discussion. One has to bear in mind that the distinction between a journal and what could be a journal is sometimes based only on a single fragment of text and is therefore inevitably debatable and subjective. A genre is not a mutually exclusive class, not “all (of whose) characteristic traits need be shared by every other embodiment of the type” (Fowler 1982, 38). It is important to stress that even if we try to establish criteria – which is fundamental in order to proceed with the creation of a corpus of documents, and therefore a study of this kind – it is extremely difficult to identify or classify a document as belonging exclusively to the genre of journal or not. Name-lists, accounts, registers, memoranda, are all dated administrative notes written by the same scribes of the village. Unfortunately, specific terms used by the Egyptians denoting textual genres are very limited and “their occurrences give only little information on the use and format of the texts referred to”<sup>166</sup> (see also chapter 4.1).

Understandably the dividing line is fluid. As already briefly remarked above in the paragraph on Day notes, texts containing basically just only accounts like lists of lamps, plaster, natron, firewood, grain deliveries, fish, etc., that is all kinds of accounts simply listing goods, but without any further information about the “action”, the events, the activities of the day, will be excluded from the list. As we have seen, they are journals, but ‘account journals’.

It may be useful to give two examples to illustrate point e. of criteria above: lamp accounts and plaster deliveries (more could be given with i.a. firewood, fish or pottery deliveries).

Lamps (*hbs* ) accounts (see Černý 1973b, chapter V and Donker van Heel-Haring 2003, 56-64)<sup>167</sup> are deliveries, most of the time issued daily; are they then

<sup>165</sup> This document must be based on day-to-day records; it seems indeed highly unlikely that the scribe would have been able to provide a workmen's register for 280 days of the year without consulting previous documentation.

<sup>166</sup> Donker van Heel-Haring 2003, 122.

<sup>167</sup> Lamps were extremely important for the work in the royal tombs where lighting was scarce. These documents record the number of lamps (*hbs*, which were not “whole” lamps but rather

to be considered journals? According to the criteria listed above, no. They are account journals, therefore excluded from the list in 5.2. They look more like “drafts”, brief notes possibly to be used later into a journal (see note 169).

Nonetheless, in the classification of journals according to the type of information and contents (see further below Chapter 7.3.a) Type A, labelled as “Deliveries/provisions” includes daily consummation of lamps/torches issued. A clarification is needed. It was decided to include these documents in the corpus of journals because they are not “pure” lamp accounts, but journals in which a part is dedicated to lamp accounts, that is, lamp accounts are written here on the same document together with notes on other Necropolis matters and activities<sup>168</sup>. When, instead, a document only contains lists of lamps, it was decided not to include it in the corpus of journals (see above point e.)<sup>169</sup>.

The same can be said about the plaster (*kd*) deliveries (see Černý 1973b, chapter IV), even if those were much more irregular and not issued daily (in O. DM 330 we can indeed see that the entries were made for every ten days).

I am fully aware of the fact that the dividing line between an events journal and a “simple” accounts journal is fluid. We can try to describe what a journal should look like, but this does not mean that the identification of this kind of document is always clear and objective. Furthermore, if we consider that there are most likely more documents to be

“wicks”) and amounts of lamp oil delivered. They were issued to the right and left side of the gang, sometimes even divided into morning and evening deliveries.

<sup>168</sup> In the corpus there are many journals which, among other matters, list lamp accounts. Those are i.a.: O. Cairo 25502, O. Cairo 25516, O. Cairo CG 25266, O. Cairo 25536, O. Turin 57031, O. Turin 57033, O. Turin 57034, O. Turin 57044, O. Turin 57047, O. Turin 57055, O. Turin 57032 (in the list of the documents not dated with certainty), O. Cairo 25249 (in the list of the documents not dated with certainty), O. Cairo 25511 (in the list of the documents not dated with certainty), O. Cairo 25816 (in the list of the documents not dated with certainty), O. Valley of Queens 6 (in the list of the documents not dated with certainty), O. Strasbourg H. 136 (in the list of the documents not dated with certainty).

<sup>169</sup> What we can consider “pure” lamp accounts are i.a: O. Cairo 25539 (lamp/wick account for c. 1 month), O. Cairo 25540 (lamp/wick account for 8 days), O. Cairo 25541 (lamp/wick account for ca. 3 weeks), O. Cairo 25542 (lamp/wick account for right and left sides during several months), O. Cairo 25543 verso (lamp/wick account), O. Cairo 25544 (lamp/wick account), O. Cairo 25547 (arrival with lamps/wicks from the storehouse), O. Cairo 25550 (lamps/wicks of right and left side), O. Cairo 25570 (issue and use of lamps/wicks), O. Cairo 25814 (list of the amounts of lamps used on days 1-4 of III *šmw*), O. Cairo 25817 (lamps used and left over on a number of days in I and II *pr.t.*), and O. Cairo 25818 (amounts of lamps taken from the storehouse on a series of days). Moreover, we can easily see that all the texts mentioned concerning “pure” lamp accounts are written on ostraca. Does this give us a sign that they were considered a different type of document than a journal?

What is more, if we take as an example O. Cairo 25515 and O. Cairo 25516 (matching lamp account, that is, each time the crew is said not to have come to work, the lamp account appropriately shows no entry because obviously no lamps were used on that day), written probably by the same scribe (see Donker van Heel-Haring 2003, 57), they show a probable combined recording system by the same scribe who was therefore working on two different kind of documents: journal and lamp account.

discovered, the list created must be considered open to new records and not as a definitive one.

Nonetheless, a new list of Necropolis journals from Deir el-Medina has been compiled. Each document (either ostraca or papyrus) will then be examined, if possible directly from the photos of the original or, if not available, using the transcriptions made by earlier scholars like Černý.

The approach taken was to collect all the available documents which, according to the criteria formulated above, could be classified as Necropolis journals and arrange them in a table list<sup>170</sup>. The first result of an initial general bibliographic research regarding lists of Necropolis journals was the list of Valbelle, even though this list is limited to documents dated with certainty<sup>171</sup>. A more complete list then resulted from consultation of the online Deir el-Medina database, where it was possible to find information about more documents, and finally from the Notebooks of Černý, where transcriptions of unpublished documents were found.

The chronological table list of all the documents is arranged according to the following:

- Date (Dynasty and if possible the name of the pharaoh)
- Number and type of document and related bibliography<sup>172</sup>
- Provenance

## 5.2 The list<sup>173</sup>

The list of documents is divided into two sections. The first section is dedicated to the documents dated with certainty. Documents which are not attributed to a specific king with certainty are presented in the second section<sup>174</sup>.

---

<sup>170</sup> Dr. Demarée kindly informed me about more unnumbered journal fragments at the Turin Museum and in the IFAO (clearly written by the scribe *Hr-šri*), unfortunately unpublished and not available for consultation, therefore not included in the list.

<sup>171</sup> Valbelle 1985, 49-54.

<sup>172</sup> The bibliography of each document is mainly taken from the Deir el-Medina database (<http://dmd.wepwawet.nl/>) with the addition of the most recent publications.

<sup>173</sup> As already stated this list should be considered as an open and preliminary one.

<sup>174</sup> During the collecting of documents, many ostraca and papyri not yet dated with certainty to a specific pharaoh were found. As the aim of this work is far from presenting a dating study, we did not analyse them to determine a specific and precise date, but they are included in a separate section in the table list. In the present work, we will only deal with documents dated with certainty.

5.2.a First section: documents dated with certainty

DATE	NUMBER OF DOCUMENT	TYPOLOGY OF DOCUMENT	PROVENANCE
<b>DYNASTY 18</b>			
day 12, 14	<b>O. Ashmolean Museum 0007</b> Černý 1957 7 and pl. XXII-XXIIa no. 1.	ostracon	No indication
<b>DYNASTY 19</b>			
<b>RAMESSES II</b>			
-Year 20, II 3 <sup>h.t.</sup> , day 11	<b>O. Cairo 25645</b> Černý 1935b, 47-48, 68* and pl. LXIV; Helck 2002, 55; KRI III, 509.	ostracon	Valley of the Kings; Davis/Ayrton excavations 1907-1908; mark: House HO (workmen's houses between KV 17 and KV 21).
-Year 24, II šmw, day 22	<b>O. Cairo 25803</b> Černý 1935b, 93, 115*, pls. CVIII, CX; Helck 2002, 55; KRI III, 510.	ostracon	Valley of the Kings, beside entrance of KV 9; Carnarvon/Carter excavations 1920-1921.
-Year 20+x, IV 3 <sup>h.t.</sup> day 28, 20+x; I pr.t., day 11, 23, 26	<b>O. Cairo 25502</b> Černý 1935b, 1, 1*, pl. I; Helck, Helck 1963b, (701); KRI III, 509-510; Helck 2002, 58.	ostracon	Valley of the Kings, beside entrance of KV 9; Davis/Ayrton excavations 1905-1906.

<sup>178</sup> Dr. Demarée kindly informed me on some fragments of papyrus held in Turin Museum (no number, inside "Cartella F 47") dating to year 30 of Ramesses III. From the few fragments it is nonetheless understandable the general outline of the documents: the columns are narrow, similar to the contemporary ostraca, and the information provided not too much detailed.

<sup>179</sup> According to Soliman D. M., unpublished PhD Thesis 2016, 268, "...after year 2 of Ramesses IV hieratic journal texts on ostraca recording the duty roster and daily deliveries **ceased to be produced** on a regular basis. During the reign of Ramesses V, such documents were predominantly created by the scribe of the ostraca with marks, and [...] no longer by hieratic scribes". In reality, we think that this feature is not that strongly marked. There was not a neat end for the production of such documents, instead, their number simply declined.

<sup>182</sup> Dr. Rob Demarée kindly informed me on some unpublished documents (not included here) in Turin (Egyptian Museum) concerning year 2 and 3 of Ramesses X. The documents/fragments are being investigated and conserved at the moment.

<sup>183</sup> A papyrus preserved in Turin Museum, inside "cartella F 351", without number, belongs to year 1 of Ramesses X, specifically to month IV of 3h.t. Furthermore, an unpublished ostracon found by Davies in the Valley of Kings in 1907/08 (O. MMA 09.184.733, kindly mentioned to me by Dr. Demarée) is probably dated to year 1 of Ramesses X.

<sup>185</sup> Some unpublished fragments of papyri held in the Bibliothèque nationale de France (P. B.N. 237, carton 3, 5, 7, 16, 22 and 27), and which cannot be connected to any specific Pharaoh, seems to date to the mid dynasty 20. These fragments of necropolis journal contain lists of absent workmen and deliveries to the community. The outline of the text, narrow columns with few, basic information, is clear even from the poor preservation of the fragments.
