6. The study of the journals

NOTE: In the following documents measures like khar, deben, oipe, etc…will be mentioned. Here the correspondence with ours:

Khar= (a measure of the volume of grain, either emmer or barley. The term khar can be translated as "sack") corresponds to 76.88 litres and consists of 4 oipe or 16 hekat.

Oipe= corresponds to 19.22 litres

Hekat= corresponds to 4.8 litres

Deben= (a measure of weight that was used for gold, silver and, most commonly, copper) corresponds to 91 gm and consists of 10 kite or 12 shat.

Qite= corresponds to 9.1 gm

Shat= corresponds to 7.6 gm (written sniw in XX Dynasty) (the senyu was exclusively a unit for calculating value, and was not considered as a real unit of weight itself).

[1] On the almost total absence of hieratic documents dated to the 18th Dynasyt, see Haring 2006, 107-112 where he states: “perhaps the absence of Eighteenth Dynasty records explicitly related to the royal necropolis and its employees is to be explained by the absence of local scribes”.
See also papyrus Louvre E. 3226 (Megally 1971b).
