**The replication machinery
of *Clostridium difficile*:**
a potential target for novel antimicrobials

Proefschrift

ter verkrijging van de graad van
Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 16 mei 2019 klokke 16:15 uur

door

Hendrika Willemina van Eijk
geboren 22 juli 1976 te Aalten

PROMOTOR

Prof. Dr. E.J. Kuijper

CO-PROMOTOR

Dr. W.K. Smits

LEDEN PROMOTIECOMMISSIE

Prof. dr. M. Yazdanbakhsh

Prof. dr. O.P. Kuipers (Rijksuniversiteit Groningen)

Dr. A.P. Roberts (Liverpool School of Tropical Medicine)

Table of contents

Chapter 1	General Introduction and outline thesis	1
Chapter 2	DNA replication proteins as potential targets for antimicrobials in drug-resistant bacterial pathogens	25
Chapter 3	Complete genome sequence of the <i>Clostridium difficile</i> laboratory strain 630 Δ erm reveals differences from strain 630, including translocation of the mobile element CTn5	53
Chapter 4	The replicative helicase CD3657 of <i>Clostridium difficile</i> interacts with the putative loader protein CD3654	81
Chapter 5	Primase (CD1454) stimulates the DNA-unwinding activity of the replicative helicase (CD3657) of <i>Clostridium difficile</i>	115
Chapter 6	The transcriptional effects of sub-inhibitory concentrations of PolC-inhibitors suggest a gene-dosage dependent response to replication inhibition in <i>Clostridium difficile</i>	149
Chapter 7	General Discussion	181
	List of Publications	208
	Samenvatting / Summary in Dutch	209
	Curriculum Vitae	215
