Smoothly breaking unitarity : studying spontaneous collapse using two entangled, tuneable, coherent amplifiers

Reep, T.H.A. van der

Smoothly breaking unitarity

Studying spontaneous collapse using two entangled, tuneable, coherent amplifiers

PROEFSCHRIFT

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 13 juni 2019
klokke 16.15 uur

door

Thomas Hendrik Abraham van der Reep

geboren te Rotterdam
in 1989

Promotor:	Prof. dr. ir. T.H. Oosterkamp
Promotiecommissie:	Prof. dr. H. Ulbricht (University of Southampton, United Kingdom)
	Prof. dr. G.A. Steele (Technische Universiteit Delft)
	Prof. dr. E.R. Eliel
	Prof. dr. M.A.G.J. Orrit
	Dr. M.J.A. de Dood

Casimir PhD series, Delft-Leiden 2019 – 21
ISBN: 978 – 90 – 8593 – 397 – 7

An electronic version of this thesis can be found at
https://openaccess.leidenuniv.nl

The work described in this thesis was performed at the Huygens-Kamerlingh Onnes Laboratory, Universiteit Leiden, Niels Bohrweg 2, 2333 CA, Leiden and at the Faculty of Applied Sciences, Technische Universiteit Delft, Lorentzweg 1, 2628 CJ, Delft.

Part of this research is supported by the NanoFront consortium, a programme of the Netherlands Organisation for Scientific Research (NWO) that is funded by the Dutch ministry of Education, Culture and Science (OCW).

Cover design by Tijs Hol – *What is large?* The cover visualises the underlying idea of this thesis. It shows an artist's impression of a phase space representation of a quantum state with pointers (measurement apparatuses). The larger the pointer, the more likely it is that a measurement of the state takes place, as indicated by the transparency of the pointers.
