This work is part of the research program 'Quantum interference effects in single molecules' with project number 141, which is financed by the Netherlands Organization for Scientific Research (NWO). The research reported in this thesis was performed at Leiden University.

The cover image shows an impression of a **2-Ru-N** self-assembled monolayer being probed by an atomic force microscope, the tip of which is surrounded by a water meniscus. On the foreground, a detailed 3D ball-and-stick model of the **2-Ru-N** molecule surrounded by water molecules is displayed.

# Contents

<b>1 Introduction</b> .....	1
1.1 History.....	2
1.2 Single-molecule techniques.....	2
1.3 Self-assembly techniques.....	4
1.4 Challenges: will molecular electronics replace current CMOS devices?.....	5
1.4.1 Electric fields during charge transport.....	5
1.4.2 High resistance.....	5
1.4.3 Why molecules should be used: intrinsic molecular properties.....	5
1.5 Molecules studied in this thesis.....	5
1.6 Outline of this thesis.....	7
<b>2 Theory</b> .....	8
2.1 Diffusive conductors.....	9
2.2 Ballistic conductors.....	9
2.3 Single-level model.....	10
2.4 Two-site model.....	13
2.5 Outlook.....	15
<b>3 Sample preparation and experimental methods</b> .....	16
3.1 Introduction.....	17
3.2 Sample preparation: molecular self-assembly.....	17
3.2 Sample characterization.....	18
3.2.1 Cyclic voltammetry.....	18
3.3 Tip preparation.....	20
3.4 Conductive Atomic Force Microscopy (C-AFM).....	20
3.4.1 Force calibration.....	21
3.5 Experimental setup.....	22
3.5.1 Humidity-dependent measurements.....	23
3.5.2 Temperature-dependent measurements.....	23
3.6 I-V measurements and data analysis.....	23
3.7 Computational details.....	24
<b>4. Switchable diode behavior in 2-Ru-N molecular layers</b> .....	25
4.1 Introduction.....	26
4.2 Experiment.....	26
4.3 Results.....	27

4.4 Discussion .....	31
4.4.1 DFT calculations on 1-Ru-N in presence and absence of water .....	32
4.4.2 DFT calculations on 2-Ru-N in presence and absence of water .....	34
4.4.3 Incorporating tip radius and force dependent data .....	40
4.5 Conclusion .....	42
<b>5. Switchable diode behavior in 2-Ru-N molecular layers with a Au top electrode .....</b>	<b>43</b>
5.1 Introduction .....	44
5.2 Experiment .....	44
5.3 Results and discussion .....	45
5.4 Conclusion .....	54
<b>6. Humidity-sensitive properties of ruthenium complex molecular junctions .....</b>	<b>55</b>
6.1 Introduction .....	56
6.2 Experiment .....	56
6.3 Results .....	57
6.4 Discussion .....	59
6.5 Outlook .....	61
6.6 Conclusion .....	64
<b>7. Correlation between ligand structure and charge-transport properties of dinuclear ruthenium complex molecular junctions .....</b>	<b>65</b>
7.1 Introduction .....	66
7.2 Experiment .....	66
7.3 Results .....	67
7.4 Discussion .....	70
7.4.1 Ru-complex 2-Ru-N .....	70
7.4.2 Ru-complex 2-Ru-N-dec .....	71
7.4.3 Ru-complex 2-Ru-C .....	72
7.4.4 Hysteresis observed in 2-Ru-C .....	74
7.5 Conclusion .....	74
<b>8. Double layers of Ru-complexes and outlook .....</b>	<b>76</b>
8.1 Introduction .....	77
8.2 Experimental .....	77
8.3 Results and discussion .....	78
8.4 Conclusion .....	80
8.5 Outlook .....	80
<b>Appendix .....</b>	<b>82</b>

A.1 XPS characterization .....	82
A.2 AFM molecular height characterization .....	82
A.3 AFM surface topography characterization .....	83
A.4 Tip-radius-dependent measurements for 2-Ru-N at high humidity .....	85
A.5 Transport measurements on bare ITO .....	86
A.6 Temperature-dependent measurements for 2-Ru-N in humid conditions .....	86
A.7 Details on the Fermi-distribution-broadening calculations.....	87
<b>Bibliography</b> .....	89
<b>Samenvatting</b> .....	95
<b>Curriculum vitae</b> .....	97
<b>List of publications</b> .....	98
<b>Acknowledgements</b> .....	99
