# Not so smooth after all: resolving dust and gas structures in protoplanetary disks

Proefschrift

ter verkrijging van  
de graad van Doctor aan de Universiteit Leiden,  
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker,  
volgens besluit van het College voor Promoties  
te verdedigen op woensdag 12 december 2019  
klokke 11:15 uur  
door

Paolo Cazzoletti

geboren te Monza, Italië  
in 1990

Promotiecommissie

Promotores: Prof. dr. E. F. van Dishoeck  
Prof. dr. L. Testi ESO/INAF

Co-promotor: Dr. S. Facchini ESO

Overige leden: Prof. dr. H. J. A. Röttgering  
Prof. dr. C. U. Keller  
Prof. dr. C. Dominik University of Amsterdam  
Dr. S. M. Andrews Harvard-Smithsonian CfA  
Dr. P. Pinilla Max Planck Institute for Astronomy

ISBN: xxx-xx-xxx-xxxx-x

**Front cover:**

Cover: De sterrennacht, Vincent van Gogh. Design by Guido Cosma.

# Contents

## Summary

## Contents

<b>1 Introduction</b>	<b>1</b>
1.1 Star and Planet formation	3
1.1.1 From clouds to stars	3
1.1.2 From dust to planets	5
1.2 Disk observations	6
1.2.1 ALMA	7
1.2.2 Dust observations	8
1.2.3 Gas observations	10
1.3 Disk sub-structures	12
1.3.1 Structures in the dust	12
1.3.2 Structures in the gas	14
1.4 SPH hydrodynamical models	16
1.5 This thesis and future outlook	17
<b>2 Testing dust trapping in the circumbinary disk around GG Tau</b>	
<b>A</b>	<b>21</b>
2.1 Introduction	23
2.2 Methods	28
2.2.1 Gas simulations	28
2.2.2 Dust simulations	29
2.2.3 Initial conditions	31
2.3 Results	32
2.3.1 Time evolution of the gas density profile	32
2.3.2 Different viscosities	33
2.3.3 Dust evolution	34

2.4 Discussion	36
<b>Appendices</b>	<b>39</b>
2.A Dependence of the final gas density profile on the temperature profile	39
<b>3 Vortices and Spirals in the HD135344B Transition Disk</b>	<b>43</b>
3.1 Introduction	45
3.2 Observations	46
3.3 Morphology	47
3.3.1 The spiral model	48
3.3.2 The ring plus asymmetry model	50
3.4 Discussion and conclusions	51
<b>4 Evidence for a massive dust-trapping vortex connected to spirals. Multi-wavelength analysis of the HD 135344B protoplanetary disk</b>	<b>55</b>
4.1 Introduction	57
4.2 Observations and data reduction	60
4.3 Results	62
4.3.1 ALMA images	62
4.3.2 Model fit in the uv-plane	64
4.4 Analysis	67
4.4.1 Dust mass	67
4.4.2 Spectral index distribution	69
4.4.3 Peak shift	71
4.4.4 Azimuthal dust trapping	72
4.5 Discussion	72
4.5.1 Spirals launched by a planet	73
4.5.2 Spirals launched by the vortex	74
4.6 Summary and conclusions	76
<b>Appendices</b>	<b>77</b>
4.A Fit results	78
<b>5 CN rings in full protoplanetary disks around young stars as probes of disk structure</b>	<b>83</b>
5.1 Introduction	85
5.2 Model	87
5.2.1 Adopted physical model	87

5.2.2	Grid of models	89
5.2.3	Chemical network	89
5.3	Results	91
5.3.1	CN abundance	91
5.3.2	Emission	94
5.3.3	Dependence on mass and flaring	97
5.3.4	Excess UV from accretion	99
5.3.5	Varying the disk size	100
5.3.6	Varying the carbon abundance	101
5.4	Discussion	103
5.5	Conclusions	104
<b>Appendices</b>		<b>106</b>
5.A	Constant $G_0/n_{\text{gas}}$	106
5.B	Density profiles for different values of $R_c$	106
5.C	Level excitation and ring location	106
<b>6</b>	<b>ALMA survey of Class II protoplanetary disks in Corona Australis: a young region with low disk masses</b>	<b>111</b>
6.1	Introduction	113
6.2	Sample selection	116
6.3	Observations	118
6.3.1	ALMA observations	118
6.3.2	VLT/X-Shooter observations	121
6.4	Results and analysis	121
6.4.1	Stellar properties	121
6.4.2	mm continuum emission	124
6.4.3	Dust masses	125
6.4.4	Comparison with other regions	126
6.4.5	$M_{\text{disk}} - M_{\star}$ relation	128
6.5	Discussion	129
6.5.1	Is CrA old?	129
6.5.2	Is CrA young?	131
6.6	Conclusion	134
<b>Appendices</b>		<b>135</b>
6.A	Additional stellar properties	135
6.B	VLT/X-Shooter Spectra	137
<b>Bibliography</b>		<b>147</b>
