Christophe Rousset

Independent musician

Dit proefschrift is geschreven als een gedeeltelijke vervulling van de vereisten voor het doctoraatsprogramma docARTES. De overblijvende vereiste bestaat uit een demonstratie van de onderzoeksresultaten in de vorm van een artistieke presentatie.

Het docARTES programma is georganiseerd door het Orpheus Instituut te Gent.

In samenwerking met de Universiteit Leiden, de Hogeschool der Kunsten Den Haag, het Conservatorium van Amsterdam, de Katholieke Universiteit Leuven en het Lemmensinstituut.

Acknowledgements

Work such as this would have been impossible without the help of numerous individuals, in different capacities. First, I must thank my supervisory team for their tireless work throughout the process of conceiving, writing, and revising this dissertation. My promoter, Marcel Cobussen, has been instrumental in confronting some of the thornier philosophical issues. He helped considerably in navigating the divide between theory and practice that often characterizes artistic research. Frans de Ruiter has been an important influence since the very beginning of my doctoral trajectory. He has helped me feel welcomed and supported throughout the whole process, and his comments and suggestions have been invaluable. Thomas Christensen's advice has been essential for connecting my artistic research with wider discourses in musicology and music theory, and I have benefitted enormously from his erudition, his continual encouragement, and his willingness to read me (and others) closely.

I am also pleased to acknowledge the generous financial support I received from the Social Sciences and Humanities Research Council of Canada (SSHRC), who funded this research with a four-year doctoral fellowship.

There have been far too many important influences in my life as a musician to detail here, but one figure stands out among the rest, namely the organist, harpsichordist, and improviser William Porter. Bill was my first harpsichord and improvisation teacher. He taught me to relish the patient work of practicing, to ground my interpretation in the key-action and sonority of the instrument at hand, and above all, to believe that I had something interesting to say as a musician. He also first got me thinking about the centrality of improvisation within historical musical practices, and moreover, he got me thinking like an improviser myself. Indeed, Bill even eventually led me to one of this

dissertation's central concepts, *mouvance*, through his sage reading suggestions. A great deal of this work is indebted to him.

Apart from my supervisory team, there have been a number of other musicians and scholars involved in this project at various points. My work with Rudolf Lutz near the beginning of my research proved to be a formative influence. Several conversations early on with Ton Koopman proved also to be very instructive, and they helped motivate me to connect my own peculiar interests to the wider practice of HIP. I also wish to extend my warm appreciation to Inge van de Ven for the Dutch translation of my Summary. More informally, I have also enjoyed friendly conversation on topics related to this research project with a number of individuals, including Tiziano Manca, Catalina Vicens, Lisa Goode Crawford, Kenneth Gilbert, Thérèse de Goede, Douglas Maple, and Julie Andrijeski.

I also wish to thank my colleagues in Historical Performance at Oberlin Conservatory for their encouragement and support. This research has benefitted immeasurably from the input of my students at Oberlin as well. They've been (mostly) willing guinea pigs for my efforts in developing pedagogical techniques for historical improvisation, and their feedback has continued to be vital in gauging the effectiveness of these techniques.

A number of professional opportunities have also helped move this research forward. Debra Nagy provided me with several occasions for experimenting with historical improvisation with audiences. Susie Napper offered me an entire concert of historical improvisations for the Montreal Baroque Festival in which to test some of this research. I also wish to thank my Montreal-based ensemble, Poiesis, for trying out some unconventional concert ideas, including one concert consisting entirely of compositions and improvisations based on partimento. Thank you, as well, to my musical partners for that concert, Elinor Frey and Joanna Marsden, who helped me get acquainted with a more compositional side of my artistic persona.

My family have long been a pillar of support. It was only at their encouragement, after all, that I decided to become a professional musician in the first place! From the very start they did everything in their power to encourage my musical development. Even now, they travel long distances by train, plane, or automobile just to see me play, and seeing them in the audience always brings me joy and comfort.

More than anyone else, I wish to thank my husband, Jason D'Aoust: for hours upon hours of lively conversation and dialogue, for his many readings of the manuscript, and for his timely assistance in editing and proofreading, particularly his close attention to the translations from French. Above all, I wish to thank him for his perpetual enthusiasm, support, and encouragement. From one side of the Atlantic to the next, he has been there with me at every step. Through it all, Jason always saw a path forward for this dissertation, even when I could not.
