## **I would like to thank .....**

This dissertation would never have been written if it had not been for the encouragement, support, and assistance I received from a large number of people.

It was under the supervision of the late 'Ineke' A.A. Abbink, that I started exploring the field of organic residue analysis. Ineke, I am sad that you will never see the finished product of your encouragement, but I respectfully acknowledge how you managed to identify the missing link in the functional analysis of ceramics, and had the insight to encourage me to apply this new approach to the ceramics from Uitgeest-Groot Dorregeest. Although in practice we worked together very rarely, you were always the source.

My most important scientific mentor was my promotor Jaap Boon. Jaap, thank you for everything: your creative genius, your enthusiasm for actual hands-on research, your capacity to see what is 'hot', your open mind and your personal generosity. You have always inspired me to learn, both as a researcher and as a person. Jaap, you were not an easy mentor to please, but once I stopped trying and learned to share insights instead, it was a joy to work with you.

My other promotor and scientific example was Corrie Bakels. Her dissertation was the first I ever read and for many years I wanted my dissertation to be just as thorough as hers. Corrie, thank you for your many years of support, your combination of blunt honesty and polite reserve have always been familiar to me. After all is said and done, I have to admit that my dissertation is probably not half as thorough as yours. But it was a good thing to strive for.

For many years I worked within the context of the AMOLF, and I have come to realise that it is a place of great scientific luxury. Not only is the AMOLF equipped with the best scientific instruments, it also provides the help of a capable and enthusiastic support staff, and gives beginning researchers a once-in-a-lifetime start in science.

I would like to thank specifically Anneke Tom, Bea Brandt-de Boer, Jos Pureveen, Annebeth Kerkhof and Jerre van der Horst for their technical assistance and Gert Eijkel and Alexander Noguerola for their assistance with statistical data handling. Many more people within and outside my research group were part of my daily life at the AMOLF Institute. I would like to acknowledge the late Tina Weeding, Jim Lomax, Ivana Pastorova, Edwin van der Heiden, Martin Scheijen, Peter Arisz, Marco Bobeldijk, Marcel Mulder, Eric van der Hagen, Ruud Steenvoorden, Jan Commandeur, Gisela van der Doelen, Marc Duursma, Jaap van der Weerd, Georgiana Languri, Beatrice Marino, Jorrit van den Berg, Annelies van der Loon, Olga Katsibiri, Nicole de Waal, Oscar van den Brink, Esther Ferreira, Katrien Keune, Frank Hoogland, Bart Husken, Ivan Nicolaev and Jord Prangma. We shared rooms, discussions, and minor victories. Thank you for a great time!

### *Acknowledgements*

Acknowledgements should also go to T.J. ten Anscher, L.P. Louwe Kooijmans and L.L. Therkorn for supplying samples and contextual information about various archaeological excavations. And to J. Hulst from the Dutch National Service for Archaeological Heritage (ROB) and E.A. Safontseva and S.V. Tsygankova for drawings and graphics advice. Thanks should also go to R.P. Evershed and co-workers in Liverpool for the extensive technical support and the access to laboratory facilities provided for lipid analysis.

Last but not least, I want to thank my family, friends, and dear ones. Thank you all for your love and support, for your patient interest in my obscure reports about vessel function and analytical chemistry and what these two things have to do with one another. Thank you for your conversations over dinners and your wonderful company, the encouragement and the care when things looked too difficult to do. Thanks for your understanding.

And Denya, my love, I thank you for your unshakable belief in me. You always encouraged me to do the work I loved to do, because you could always see how happy it made me. Denya, I know finishing this thesis meant I was often away from home, distracted, absent minded, stressed out, grumpy and difficult – I thank you for giving me the time and space to do what I had to do. Your belief and generosity are most profoundly acknowledged here, in black and white, with love and respect.
