Title: Molecular and cellular determinants of cardiac tachyarrhythmias: from trigger to therapy

Issue Date: 2016-10-05

Molecular and cellular determinants of Cardiac tachyarrhythmias:

From trigger to therapy

B.O. Bingen

Colophon

The studies described in this thesis were performed at the department of Cardiology of the Leiden University Medical Center, Leiden, the Netherlands. Thesis, Leiden University, the Netherlands

Molecular and cellular determinants of Cardiac tachyarrhythmias:

From trigger to therapy

PROEFSCHRIFT

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. mr. C.J.J.M. Stolker
volgens besluit van het College voor Promoties
te verdedigen op woensdag 5 oktober 2016
klokke 15.00 uur

door

Brian Oscar Bingen

Geboren te Den Helder

In 1987

Promotor:

Prof. dr. M.J. Schalij

Co-Promotores:

Dr. D.A. Pijnappels

Dr. A.A.F. de Vries

Leden promotiecommissie:

Prof. dr. D.E. Atsma

Prof. dr. K. Zeppenfeld

Prof. dr. M.J. Goumans

Prof. dr. A.V. Panfilov (Universiteit van Gent)

Prof. dr. U. Schotten (Universiteit van Maastricht)

The research described in this thesis was supported by a grant of the Dutch Heart Foundation (DHF-2012T023)

TABLE OF CONTENTS

Chapter I	General introduction and outline of thesis	7
Chapter II	Similar arrhythmicity in hypertrophic and fibrotic cardiac cultures caused by distinct substrate-specific mechanisms. – <i>Cardiovasc Res.</i> 2013;97:171-81.	29
Chapter III	Prolongation of minimal action potential duration in sustained fibrillation decreases complexity by transient destabilization. – <i>Cardiovasc Res.</i> 2013;97:161-70	59
Appendix I & II	Letter to the editor by Wolkowicz et al.; Prolongation of minimal action potential duration in sustained fibrillation decreases complexity by transient destabilization. – <i>Cardiovasc Res.</i> 2013;98:155-6 Reply from authors – <i>Cardiovasc Res.</i> 2013;98:156-7	89
Chapter IV	Atrium-specific Kir3.x determines inducibility, dynamics, and termination of fibrillation by regulating restitution-driven alternans. – <i>Circulation.</i> 2013;128:2732-44.	101
Chapter V	Constitutively active acetylcholine-dependent potassium current increases atrial defibrillation threshold by favoring post-shock re-initiation. – <i>Submitted for publication</i>	139
Chapter VI	Light-induced termination of spiral wave arrhythmias by optogenetic engineering of atrial cardiomyocytes. – <i>Cardiovasc Res.</i> 2014;104:194-205	177
Appendix III	CardioPulse: first evidence for shockless atrial Fibrillation treatment: cardiac optogenetics achieve defibrillation without the pain of electric shocks. – <i>Eur Heart J.</i> 2014;35:2702	207
Chapter VII	Summary, Conclusions, Discussion and Future perspectives	211
