Novel insights into old anticancer drugs

Sabina Yasmin van der Zanden

ISBN: 978-94-6416-386-5

Coverdesign: M.L.M. Jongsma

Layout: M.L.M. Jongsma and S.Y. van der Zanden

Financial support for printing of this thesis was provided by The Netherlands Cancer Institute and Leiden University Medical Center.

Print: Ridderprint | www.ridderprint.nl

The research described in this thesis was performed at the Department of Cell Biology at the Netherlands Cancer Institute in Amsterdam, The Netherlands, as well as at the Department of Chemical Immunology and the Department of Cell and Chemical Biology at Leiden University Medical Center in Leiden, The Netherlands. The work was financially supported by the Institute for Chemical Immunology and Oncode Institute.

TABLE OF CONTENTS

Chapter 1	New insights into the activities and toxicities of the old anti-cancer drugs doxorubicin <i>FEBS Journal (2020)</i>	9
Chapter 2	Genome-wide identification and characterization of novel factors conferring resistance to topoisomerase II poisons in cancer <i>Cancer Research (2015)</i>	35
Chapter 3	Uncoupling DNA damage from chromatin damage to detoxify doxorubicin <i>PNAS (2020)</i>	63
Chapter 4	Doxorubicin and aclarubicin: shuffling anthracycline glycons for improved anticancer agents <i>Journal of Medicinal Chemistry (2020)</i>	103
Chapter 5	Synthetic (<i>N,N</i> -dimethyl)doxorubicin glycosyl diastereomers to dissect modes of action of anthracycline anticancer drugs	141
Chapter 6	Exploring the chemical space around the 3' amine of doxorubicin for improved cytotoxic drugs with different genomic specificity	163
Chapter 7	Nuclear DNA sensors re-localize upon chromatin damage; do they play a role in anthracycline induced cell death?	185
Chapter 8	Opportunities for small molecules in cancer immunotherapy <i>Trends in Immunology (2020)</i>	205
Chapter 9	Summary and future prospects	235
Appendices	Nederlandse samenvatting	245
	List of publications	256
	Curriculum vitae	258
	Acknowledgements	259
