Title: Patterns on spatially structured domains

Issue Date: 2021-03-02

Patterns on Spatially Structured Domains

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof. dr. ir. H. Bijl,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 2 maart 2021
klokke 11.15 uur

door

Willem Migchel Schouten-Straatman

geboren te Baarn
in 1992

Promotor:

Prof. dr. Arjen Doelman

Copromotor:

Dr. Hermen Jan Hupkes

Promotiecommissie:

Prof. dr. Peter Bates

Dr. Grégory Faye

Prof. dr. Erik Van Vleck

Prof. dr. Frank van der Duijn Schouten

Prof. dr. Roeland Merks

Michigan State University

Université Toulouse III – Paul Sabatier

University of Kansas

Contents

1	Introduction	1
1.1	Scalar LDEs and MFDEs	2
1.1.1	The FPUT lattice	3
1.1.2	The Nagumo equation	4
1.2	The FitzHugh-Nagumo system	9
1.3	Techniques	13
1.3.1	Linear Fredholm theory	13
1.3.2	The spectral convergence method	16
1.3.3	Exponential dichotomies	24
2	Nonlinear stability of pulse solutions for the discrete FitzHugh-Nagumo equation with infinite-range interactions	29
2.1	Introduction	30
2.2	Main results	38
2.3	The singular perturbation	42
2.3.1	Strategy	45
2.3.2	Preliminaries	47
2.3.3	Proof of Proposition 2.3.4	48
2.4	Existence of pulse solutions	58
2.5	The point and essential spectrum	65
2.6	The resolvent set	78
2.7	Green's functions	85
2.7.1	Construction of the Green's function	87
2.7.2	Meromorphic expansion of G_λ	96
2.7.3	Decomposition into stable and center modes	105
2.8	Nonlinear stability	111
3	Travelling waves for spatially discrete systems of FitzHugh-Nagumo type with periodic coefficients	133
3.1	Introduction	134
3.2	Main results	140
3.3	The limiting system	145
3.3.1	Properties of $\bar{L}_o$	147
3.4	Transfer of Fredholm properties	149

3.4.1	Strategy	153
3.4.2	Proof of Proposition 3.4.7	156
3.5	Existence of travelling waves	164
3.6	Stability of travelling waves	171
3.6.1	The operator $\bar{\mathcal{L}}_\varepsilon$	173
3.6.2	Spectral stability	175
4	Travelling wave solutions for fully discrete FitzHugh-Nagumo type equations with infinite-range interactions	179
4.1	Introduction	180
4.2	Main result	186
4.2.1	The spatially discrete system	187
4.2.2	Spatially discrete travelling waves	188
4.2.3	The fully discrete system	190
4.2.4	Nonuniqueness and numerical examples	193
4.3	Setup	195
4.4	The limiting system	199
4.5	Linear theory for $\Delta t \rightarrow 0$	205
4.5.1	Strategy	205
4.5.2	Spectral convergence	208
4.5.3	Exponential decay	213
4.6	Proof of main result	218
4.6.1	Existence of solutions	219
4.6.2	Local uniqueness of solutions	227
4.A	Auxiliary results	234
5	Exponential dichotomies for nonlocal differential operators with infinite-range interactions	239
5.1	Introduction	240
5.2	Main results	247
5.2.1	State spaces	250
5.2.2	Exponential dichotomies on $\mathbb{R}$	252
5.2.3	Exponential dichotomies on half-lines	255
5.3	The existence of exponential dichotomies	256
5.3.1	Preliminaries	258
5.3.2	Exponential decay	259
5.3.3	The restriction operators π^+ and π^-	265
5.3.4	Fundamental properties of the Hale inner product	267
5.3.5	Exponential splitting of the state space X	271
5.4	Fredholm properties of the projections $\Pi_{\hat{P}}$ and $\Pi_{\hat{Q}}$	274
5.5	Exponential dichotomies on half-lines	277
5.5.1	Strategy	278
5.5.2	Construction of $\mathcal{Y}(\tau)$	280
5.5.3	Exponential decay	282
5.5.4	Projection operators	286
5.6	Degeneracies and their avoidance	289

5.6.1	Structural conditions	290
5.6.2	Examples	295
5.6.3	(Co)-dimension counting	300
5.6.4	Cyclic coefficients	302
5.6.5	Nondegeneracy of the Hale inner product	304
5.6.6	The nontriviality condition (HKer)	309
6	Parameter-dependent exponential dichotomies for nonlocal differ-	
	tial operators	311
6.1	Introduction and main result	311
6.2	One-sided exponential weights	313
6.3	Construction of exponential splittings	318
	Bibliography	329
	Samenvatting	343
	Dankwoord	349
	Curriculum Vitae	351
