Title: Measures and matching for number systems

Issue Date: 2021-03-04

Acknowledgements

This thesis collects the scientific results of the last four years. It is the conclusion of an amazing journey that shaped me into the scientist and the person I am today. Many people have contributed to this, and I would love to thank all of them for their immense support.

Firstly, many sincere thanks go to my supervisor Charlene for always being inspiring and supportive, and for sharing her passion and her enthusiasm for Maths with me. Doing research with her has been exciting and illuminating: I could have not asked for a better guidance. I am also grateful to my promoter Frank for always having the right words and a kind approach in every situation. My gratitude extends to NWO for funding this project.

Secondly, I want to thank all the people from the MI. Their presence makes Leiden University a warm and welcoming place, where doors are always open to everyone. Particularly, to all my co-authors, to all the people that worked in office 203b, to the members of the reading club, to the ones of the iPOD seminars, to the organizers of the NETWORKS goes to school events, to the ones of the PRE-university college, to the companions of coffee breaks and lunch walks: I am very grateful to have shared the PhD journey with you.

Thirdly, huge thanks go to all the people I can call Friends. Thank you for all the laughs, the climbing sessions, the traveling around the world, the complaints about the rain, the countless meals we cooked together, for surviving together through the 2020 quarantine and through 2020 itself. Amongst them, enormous thanks go to my incredible paranympths.

Fourthly, I am deeply thankful to Pablo for all the life moments we have shared: You are home for me.

Last but not least, I am extremely lucky to have an awesome family, who has been and will always be with me, and for me: Thanks to mum, dad, and my brother.

Curriculum Vitae

Marta Maggioni was born in Italy in 1992. She graduated *cum laude* in 2011 with a scientific degree from the high school M.G. Agnesi. Afterwards she studied Mathematics at the University of Milano Bicocca, where she obtained a Bachelor of Science *cum laude* in Mathematics in 2014. She was part of the Algant Erasmus Mundus fellowship, studying at the University of Leiden, The Netherlands, and the University of Regensburg, Germany. She obtained *cum laude* a double degree as a Master of Science in Mathematics in 2016 in Bordeaux, with a thesis on *Nearly holomorphic modular forms*, supervised by Prof. Dr. G. Kings. In September 2016 she moved back to Leiden to start her PhD research project under the supervision of Dr. C. Kalle. She served as a teaching assistant in several courses, mainly in the area of Algebra, Probability and Statistics. In 2019 she supervised students of the Leiden PRE-University programme, who won the Jan Kijne Onderzoeksprijs. She presented her research at multiple scientific conferences and was invited to local seminars around Europe. She organised the first event *Networks goes to school* in 2018 with Dr. N. Starreveld, by an initiative of B. Groeneveld. The masterclass is now an annual meeting for secondary students and teachers across The Netherlands. She is a member of SAMI - Supporting African Maths Initiative, and she volunteered in various Maths camps in Kenya and Tanzania over the years.

Symbols			
β -transformation		20	
c -Lüroth expansion		37	
A			
absolutely continuous measure		13	
AFN-map		115	
alternating ordering		115	
approximation coefficients		32	
B			
Birkhoff's Ergodic Theorem		13	
C			
continued fraction map		24	
α -CF map	26, 110, 119		
flipped α -CF map		111	
convergents		31, 114	
F			
fundamental matrix		77	
G			
Gauss map		24, 111	
H			
Hamming weight		136	
I			
invariant measure		12	
K			
Krengel entropy		127	
L			
Lüroth map		23	
loop		38	
Lyapunov exponent		44	
M			
Markov map		59	
matching	15, 110, 117, 138		
matching intervals		110, 119	
measure for random map		16	
N			
natural extension	14, 122, 123, 126		
P			
Perron-Frobenius operator		13	
pseudo-skew product or random map		16	
Q			
quadratic interval		119	
R			
random c -Lüroth expansion		103	
random affine map		71	
(α, β) -transformation		102	
W -shaped map		98	
β -transformation		99	
c -Lüroth map	36, 103		
signed β -transformation		143	
symmetric doubling map		153	
tent map		96	
random continued fraction map		147	
random matching		140	
returning point		38	
S			
semi-regular expansion		114	
strong matching		138	
strong random matching	140, 157		
W			
wandering rate		130
