Title: Protostellar jets and planet-forming disks: Witnessing the formation of Solar System analogues with interferometry
Issue date: 2021-03-09

Protostellar jets and planet-forming disks: Witnessing the formation of Solar System analogues with interferometry

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus prof.dr.ir. H. Bijl,
volgens besluit van het College voor Promoties
te verdedigen op dinsdag 9 maart 2021
klokke 16:15 uur
door

Łukasz Tychoniec

geboren te Nowogard, Polen
in 1992

Promotiecommissie

Promotores:	Prof. dr. E. F. van Dishoeck	Universiteit Leiden
	Prof. dr. M. R. Hogerheijde	Universiteit Leiden, Universiteit van Amsterdam
Co-Promotor	Dr. J. J. Tobin	National Radio Astronomy Observatory
Overige leden:	Prof. dr. H. J. A. Röttgering	Universiteit Leiden
	Prof. dr. S. Viti	Universiteit Leiden
	Prof. dr. J. K. Jørgensen	University of Copenhagen
	Dr. M. Tafalla	Observatorio Astronómico Nacional, Madrid
	Dr. M. Ansdell	NASA Headquarters, Washington DC

ISBN: 978-94-6419-137-0

Front cover and chapter title illustrations by Marta Paula Tychoniec

And whether or not it is clear to you,
no doubt the universe is unfolding as it should.

Max Ehrmann
Desiderata, 1924

For Marta,
thank you for convincing me that it was worth it

Contents

1 Introduction **1**
- 1.1 Origin of solar-like stars . . . 2
  - 1.1.1 Collapse of a molecular cloud . . . 2
  - 1.1.2 Protostellar classification . . . 3
  - 1.1.3 Observations of protostars . . . 4
- 1.2 Molecules as tracers of protostellar systems . . . 5
- 1.3 Protostellar jets and outflows . . . 8
  - 1.3.1 Jet launching and observations . . . 8
  - 1.3.2 Entrained outflow . . . 9
  - 1.3.3 Radio jets . . . 9
- 1.4 From embedded to planet-hosting disks . . . 10
  - 1.4.1 Formation of an embedded disk . . . 10
  - 1.4.2 Determination of embedded disk masses . . . 11
- 1.5 Formation of planets . . . 12
- 1.6 This thesis . . . 13

2 The VLA nascent disk and multiplicity survey of Perseus protostars (VANDAM). IV. Free-free emission from protostars: links to infrared properties, outflow tracers, and protostellar disk masses **17**
- 2.1 Introduction . . . 19
  - 2.1.1 The sample . . . 20
- 2.2 Observations and analysis . . . 20
- 2.3 Results . . . 22
  - 2.3.1 Detections . . . 22
  - 2.3.2 Flux densities from protostars . . . 23
  - 2.3.3 Spectral indices . . . 24
  - 2.3.4 Multiple systems . . . 26
  - 2.3.5 Non-detections . . . 29
  - 2.3.6 Updating radio and bolometric luminosity correlations . . . 29
- 2.4 Correlations with molecular outflow tracers . . . 30
  - 2.4.1 Far-infrared line emission . . . 30
  - 2.4.2 Molecular outflow force . . . 32
- 2.5 Mass of the protostellar disks . . . 34
  - 2.5.1 Calculating the mass . . . 34
  - 2.5.2 Evolutionary trend in dust mass . . . 38
- 2.6 Conclusions . . . 39

Appendix . . . 43
- 2.A Tables . . . 43

2.B Additional correlations . . . 73
2.C Interesting sources . . . 74
2.D Free-free and dust slopes . . . 75
2.E Protostars of the VANDAM survey in Ka-band and C-band . . . 87

3 Dust masses of young disks: constraining the initial solid reservoir for planet formation 107
3.1 Introduction . . . 109
3.2 Observations and analysis . . . 110
3.2.1 Observations . . . 110
3.2.2 Gaussian fitting . . . 111
3.3 Dust disk masses . . . 112
3.3.1 Comparison of the integrated fluxes between 1 and 9 mm . . . 112
3.3.2 Disk mass measurements . . . 114
3.3.3 ALMA Class 0/I disk masses for different star-forming regions . . . 116
3.4 Exoplanetary systems and young disks - a comparison of their solid content . 117
3.4.1 Exoplanet sample selection . . . 118
3.4.2 Comparison of young disk dust masses with the solids in exoplanetary systems . . . 118
3.4.3 The context of planet formation models . . . 121
3.5 Conclusions . . . 122
Appendix . . . 127
3.A Additional plots . . . 127

4 Chemical and kinematic structure of extremely high-velocity molecular jets in the Serpens Main star-forming region 133
4.1 Introduction . . . 135
4.2 Observations . . . 137
4.3 Results . . . 138
4.3.1 Images of outflows . . . 138
4.3.2 Velocity regimes . . . 140
4.3.3 Chemical abundances in velocity components . . . 142
4.3.4 Outflow force . . . 146
4.4 Discussion . . . 149
4.4.1 Jet and wind kinematics. The driving force of outflows. . . . 149
4.4.2 Relations with temperature and velocity components from HIFI . . . 151
4.4.3 The case of Ser-emb 8 (N): a pristine outflow-jet system . . . 152
4.4.4 Chemistry of the velocity components . . . 154
4.5 Summary . . . 157
Appendix . . . 159
4.A Relations with temperature and velocity components from HIFI . . . 159
4.B Additional figures . . . 162
4.C Tables . . . 165

5 Which molecule traces what: chemical diagnostics of protostellar sources 171
5.1 Introduction . . . 173
5.2 Physical components of a protostellar system . . . 175
5.3 Observations . . . 177
5.3.1 Datasets . . . 177

5.3.2 Spectral setup of the observations . . . 178
5.4 Protostellar envelope . . . 179
5.4.1 Continuum emission from protostars . . . 179
5.4.2 Molecular lines . . . 181
5.5 Outflows and jets . . . 183
5.5.1 Extremely high-velocity jet . . . 184
5.5.2 Low-velocity outflow . . . 186
5.5.3 Shock sputtering products . . . 188
5.6 Outflow cavity walls . . . 190
5.6.1 Maps . . . 190
5.6.2 Spectral profiles - cavity walls or entrained outflow . . . 192
5.7 Inner envelope . . . 193
5.7.1 Compact emission . . . 193
5.7.2 Embedded disks . . . 196
5.8 Discussion . . . 197
5.8.1 COMs in outflow versus hot core . . . 198
5.8.2 Carbon-chains and other hydrocarbons vs COMs . . . 200
5.8.3 Class 0 vs Class I in different components . . . 201
5.9 Conclusions . . . 202
Appendix . . . 204
5.A Continuum images . . . 204
5.B Envelope tracers . . . 205
5.C Outflow . . . 207
5.D Cavity walls . . . 210
5.E Additional plots . . . 211
5.F Tables . . . 211
