**Author:** Dijk, B. van

**Title:** The role and analysis of molecular systems in electrocatalysis

**Issue Date:** 2021-03-10

The role and analysis of molecular systems in electrocatalysis

Proefschrift

ter verkrijging van  
de graad van Doctor aan de Universiteit Leiden,  
op gezag van Rector Magnificus Prof.dr.ir. H. Bijl,  
volgens besluit van het College voor Promoties  
te verdedigen op woensdag 10 maart 2021  
klokke 11:15 uur

door

**Bas van Dijk**

geboren te Heemskerk in 1992

**Promotiecommissie:**

**Promotoren**

dr. D. G. H. Hetterscheid

prof. dr. M. T. M. Koper

**Overige commissieleden**

prof. dr. H. S. Overkleeft (voorzitter)

prof. dr. E. Bouwman (secretaris)

dr. M. Costa Figueiredo (Technische Universiteit Eindhoven)

prof. dr. A. Macchioni (Università degli Studi di Perugia)

Financial support was provided by the European Research Council and the Leiden Institute of Chemistry

Print: Ipskamp Drukkers B.V., Enschede

ISBN: 978-94-6421-215-0

# Table of contents

|                             |                                                                                                                                                        |     |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 1</b>            | Introduction to the role and analysis of molecular systems as electrochemical catalysts.                                                               | 7   |
| <b>Chapter 2</b>            | The influence of the ligand in the iridium mediated electrocatalytic water oxidation.                                                                  | 41  |
| <b>Chapter 3</b>            | Pinpointing the active species of the Cu(DAT) catalyzed oxygen reduction reaction                                                                      | 69  |
| <b>Chapter 4</b>            | A selective molecular dinuclear copper oxygen reduction catalyst for the electrochemical synthesis of H <sub>2</sub> O <sub>2</sub> at neutral pH      | 89  |
| <b>Chapter 5</b>            | Mechanistic insight from structure–activity studies in the electrochemical oxygen reduction by substituted tris(2-pyridylmethyl)amine copper complexes | 115 |
| <b>Chapter 6</b>            | Summary and conclusion                                                                                                                                 | 143 |
| <b>Appendices</b>           |                                                                                                                                                        |     |
|                             | A: Supplementary information for Chapter 2                                                                                                             | 153 |
|                             | B: Supplementary information for Chapter 3                                                                                                             | 167 |
|                             | C: Supplementary information for Chapter 4                                                                                                             | 191 |
|                             | D: Supplementary information for Chapter 5                                                                                                             | 205 |
| <b>Samenvatting</b>         |                                                                                                                                                        | 217 |
