Title: The metallophilic interaction between cyclometalated complexes: photobiological

applications

Issue Date: 2021-04-08

PROPOSITIONS (STELLINGEN)

accompanying the thesis

The Metallophilic Interaction between Cyclometalated Complexes: Photobiological Applications

- 1. The majority of literature claims that red light activation is better for photodynamic therapy than blue light activation. However, blue light activation can be very good for *in vivo* PDT, too. (*P. Gholam, et.al., J. Dtsch. Dermatol. Ges.,* 2018, 16, 711-717).
- 2. A photosensitizer capable of performing PDT type I is more susceptible to kill hypoxic cancer cells, than photosensitizers triggering PDT type II. (S. A. McFarland, et al., Curr. Opin. Chem. Biol. 2020, 56, 23-27)
- 3. The potential of the metal...metal interaction in d^8 and d^{10} metal complexes for phototherapeutic applications is still under-utilized. (*V. W. W. Yam, et al., Chem. Rev.* **2015**, 115, 7589-7728)
- 4. The current development stage of nanotechnology is not high enough to deliver drugs efficiently to tumors *in vivo*. (*S. Wilhelm, et al., Nat. Rev. Mater.* **2016**, *1*, *1-12*)
- 5. Cyclometalation is not only a feasible method to create palladium- or platinum-based photosensitizers activatable with visible light, but also a strategy to achieve metal...metal interaction. (*This thesis, Chapters 2, 3 & 5*)
- 6. Changing the metal center in a d^8 metal complex by another d^8 metal center can dramatically change its photophysical and photobiological properties. (*This thesis, Chapters 3 & 4*)
- 7. The aggregation state of a metallodrug in cell medium or in blood strongly influences its biological effects. (*This thesis, Chapters 3, 4, 5 & 6*)

- 8. Noble metal complexes can easily be tracked by ICP-MS in cells or organs, as they are not endogenous to these systems. (*This thesis, Chapters 3, 4, 5 & 6*)
- 9. The primary aim and final outcome of a fundamental research project sometimes look like two different branches in a tree.
- 10. If chemists cannot find their dream job in chemistry, they may also become a cook.
- 11. The presentation and writing skills of a PhD student provide information on whether they enjoy doing research and if they are suitable for academia.
- 12. Finding the appropriate cooperation either within the host institute, through conferences, or by reading published papers, can greatly save time and improve research quality.
