**Author:** Concha Ramirez, F.A.

**Title:** Simulating the birth environment of circumstellar discs

**Issue Date:** 2021-04-06

Simulating the birth environment  
of circumstellar discs

# Simulating the birth environment of circumstellar discs

Proefschrift

ter verkrijging van  
de graad van doctor aan de Universiteit Leiden,  
op gezag van rector magnificus prof. dr. ir. H. Bijl,  
volgens besluit van het college voor promoties  
te verdedigen op 6 april 2021  
klokke 15.00 uur

door

Francisca Andrea Concha Ramírez

geboren te Temuco, Chile  
in 1988

Promotiecommissie

Promotor: Prof. dr. S.F. Portegies Zwart  
Co-promotor: Dr. M.R. Hogerheijde

Overige leden: Prof.dr. H.J.A. Röttgering University of Leiden  
Prof.dr. J.S. Kaastra University of Leiden  
Prof.dr. C.W.M. Fridlund University of Leiden  
Dr. E. Sellentin University of Leiden  
Prof.dr. C. Dominik University of Amsterdam  
Dr. E. Kokubo University of Tokyo  
Prof.dr. S. Pflanzner Forschungszentrum Jülich

Cover design by Francisca Concha-Ramírez.

The background colour of the cover is *Cosmic Latte* [#FFF8E7, RGB (255, 248, 231)], the average colour of the Universe (Baldry et al. 2002). This colour is obtained by averaging the light emitted by 20,000 galaxies from the 2dF Survey (Colless et al. 2001).

*There is no thing as a single-issue struggle  
because we do not live single-issue lives.*

---

*Audre Lorde*

<b>1. Introduction</b>	<b>1</b>
1.1. Star clusters	3
1.1.1. Formation and evolution	3
1.1.2. Evolutionary time scales and radii	6
1.2. Circumstellar discs	7
1.2.1. Formation and evolution	8
1.2.2. Disc masses and sizes	10
1.3. Effects of the environment on circumstellar disc evolution	11
1.3.1. Dynamical truncations	12
1.3.2. External photoevaporation	13
1.3.3. Ram pressure stripping	16
1.3.4. Supernovae	17
1.4. Numerical simulations	18
1.4.1. N-body codes	18
1.4.2. Smoothed-particle hydrodynamics	19
1.4.3. AMUSE	19
1.5. This thesis	20
<b>2. Viscous evolution of circumstellar discs in young star clusters</b>	<b>25</b>
2.1. Introduction	26
2.2. Methods	27
2.2.1. Evolution of isolated viscous discs	27
2.2.2. Gas in the cluster	29
2.2.3. Dynamical disc truncation	30
2.2.4. Numerical implementation	30
2.3. Results	31
2.3.1. Initial conditions	31
2.3.2. The effect of gas in the cluster	33
2.3.3. Evolution of the circumstellar discs	33
2.3.4. Comparison with observations	34
2.4. Discussion	38
2.5. Summary and conclusions	41
<b>3. External photoevaporation constrains time-scale for planet formation</b>	<b>43</b>
3.1. Introduction	44
3.2. Model	46
3.2.1. Viscous growth of circumstellar discs	46
3.2.2. Dynamical truncations	47
3.2.3. External photoevaporation	47
3.2.4. Initial conditions	51
3.3. Results	54
3.3.1. Disc mass loss in time	54
3.3.2. Disc lifetimes	57
3.4. Discussion	60
3.4.1. Disc survival and consequences for planet formation	60
3.4.2. Influence of initial conditions	61
3.4.3. Model caveats	62
3.5. Conclusions	64
3.A. Resolution of the discs	64

<b>4. Effects of stellar density on photoevaporation of circumstellar discs</b>	<b>67</b>
4.1. Introduction . . . . .	68
4.2. Model . . . . .	69
4.2.1. Stars and circumstellar discs . . . . .	70
4.2.2. External photoevaporation . . . . .	70
4.2.3. Initial conditions . . . . .	71
4.2.4. Model caveats . . . . .	72
4.3. Results . . . . .	73
4.3.1. Disc fractions and lifetimes . . . . .	75
4.3.2. Disc masses . . . . .	77
4.4. Discussion . . . . .	80
4.5. Conclusions . . . . .	80
<b>5. Evolution of circumstellar discs in young star-forming regions</b>	<b>83</b>
5.1. Introduction . . . . .	84
5.2. Model . . . . .	86
5.2.1. Molecular cloud collapse and star formation . . . . .	86
5.2.2. Stellar dynamics and circumstellar discs . . . . .	87
5.2.3. Initial conditions . . . . .	91
5.3. Results . . . . .	91
5.3.1. Star formation and cluster evolution . . . . .	91
5.3.2. Disc masses . . . . .	96
5.4. Discussion . . . . .	100
5.5. Summary and conclusions . . . . .	103
Bibliography . . . . .	106
