# **A macro level assessment of material circularity**

Proefschrift

ter verkrijging van  
de graad van doctor aan de Universiteit Leiden,  
op gezag van rector magnificus Prof.dr.ir. H. Bijl,  
volgens besluit van het College voor Promoties  
te verdedigen op donderdag 6 mei 2021  
klokke 11.15 uur

door

Glenn Alonso Aguilar Hernández

geboren te San José, Costa Rica

in 1988

Promotor: Prof. dr. A. Tukker  
Copromotor: Dr. J.F.D. Rodrigues

Promotiecommissie: Prof. dr. ir. P.M. van Bodegom (voorzitter)  
Prof. dr. ing. J.W. Erisman (secretaris)

Overige commissieleden: Dr. P.A. Behrens  
Dr. L.A. Scherer  
Dr. R. Wang  
Prof. Dr. K. Hubacek  
Prof. Dr. H. Vollebergh

*“Only those who attempt the absurd  
will achieve the impossible.”*

M.C. Escher (1898-  
1972)

## Table of Contents

<b>Chapter 1</b> General introduction .....	1
1.1. Natural resources, and the challenges of sustainable resource management .....	1
1.2. Circular economy and circularity interventions .....	2
1.3. A global picture of material circularity .....	3
1.4. Assessing material circularity .....	4
1.5. Problem statement, objectives and research questions .....	5
1.6. Reading guidelines .....	7
1.7. References .....	8
<b>Chapter 2</b> Assessing circularity interventions: A review of EEIOA-based studies .....	15
Abstract .....	15
2.1. Introduction .....	16
2.2. Method and data .....	17
2.3. Results and discussion .....	21
2.3.1. Residual waste management .....	21
2.3.2. Closing supply chains .....	22
2.3.3. Product lifetime extension .....	24
2.3.4. Resource efficiency .....	26
2.4. Synthesis of EEIOA frameworks on the assessment of circularity interventions .....	26
2.4.1. Modelling residual waste management .....	29
2.4.2. Modelling closing supply chains .....	30
2.4.3. Modelling product lifetime extension .....	30
2.4.4. Modelling resource efficiency .....	31
2.5. Discussion .....	32
2.6. Conclusion .....	33
2.7. References .....	34
<b>Chapter 3</b> The circularity gap of nations: A multiregional analysis of waste generation, recovery, and stock depletion in 2011 .....	43
Abstract .....	43
3.1. Introduction .....	44
3.2. Data and methods .....	46
3.2.1. System definition .....	46
3.2.2. Circularity gap calculation .....	47
3.2.3. Global, multiregional hybrid input-output table from EXIOBASE v3.3. ....	48
3.2.4. Cross-country, regression analysis .....	50
3.3. Results .....	50
3.4. Discussion .....	55
3.4.1. Opportunities of CG reduction through circularity interventions .....	55

3.4.2. Further steps.....	57
3.5. Conclusions.....	58
3.6. References.....	58
<b>Chapter 4</b> Global distribution of material inflows to in-use stocks in 2011 and its implications for a circularity transition.....	65
Abstract.....	65
4.1. Introduction.....	66
4.2. Method.....	67
4.2.1. Material inflows to in-use stocks in the MR-HIOT EXIOBASE .....	67
4.2.2. Estimating the global distribution of material inflows to in-use stocks.....	69
4.2.3. Regression analysis.....	70
4.3. Results.....	70
4.3.1. Global distribution of material inflows to in-use stocks .....	70
4.3.2. Material composition of stock additions.....	72
4.3.3. Sectoral distribution of inflows to in-use stocks.....	73
4.3.4. Relation between material inflows to in-use stocks and affluence .....	75
4.4. Discussion conclusions .....	76
4.4.1. Implications for a global circularity transition.....	77
4.4.2. Further research .....	78
4.4.2.1. The need for MR-HIOT time series.....	78
4.4.2.2. The need for allocating stock additions to capital stock in use by specific economic sectors.....	78
4.4.2.3. The need for more detailed insights in stock additions composition .....	79
4.4.2.4. Data uncertainty .....	79
4.4.3. Concluding reflections .....	79
4.5. References.....	80
<b>Chapter 5</b> Macroeconomic, social, and environmental impacts of a circular economy up to 2050: A meta-analysis of prospective studies.....	85
Abstract.....	85
5.1. Introduction.....	86
5.2. Method and data.....	88
5.2.1. Literature search and eligibility criteria.....	88
5.2.2. Meta-analysis .....	91
5.3. Results.....	93
5.3.1. Trajectory of changes in GDP, job creation, and CO <sub>2</sub> emissions for 2020-2050 .....	93
5.3.2. The macroeconomic, social, and environmental impacts of circularity up to 2030 .....	94
5.3.3. Does the circular economy lead to a ‘win-win-win’ situation? .....	97

5.4. Discussion.....	97
5.4.1. Key modelling features .....	97
5.4.2. Limitations and further research .....	99
5.5. Conclusion .....	100
5.6. References.....	101
<b>Chapter 6</b> General discussion .....	107
6.1. Introduction.....	107
6.2. Answers to research questions .....	107
6.2.1. RQ1. <i>What is the state of the art of environmentally extended input-output analysis (EEIOA) on the assessment of circularity interventions?</i> .....	107
6.2.2. RQ2. <i>How much unrecovered waste is available to be reintroduced into the global economy as secondary materials in a specific period?</i> .....	108
6.2.3. RQ3. <i>Where are the materials accumulated in the global economy that could enable a circularity transition?</i> .....	109
6.2.4. RQ4. <i>What are the expected macroeconomic, social, and environmental impacts of circularity interventions at national and global level?</i> .....	109
6.3. Limitations and further research .....	111
6.3.1. Data resolution .....	111
6.3.5. Improving waste accounts.....	112
6.3.2. Time series .....	112
6.3.3. Integrating stock accounts and stock-flow modelling.....	112
6.3.4. Dynamic modelling.....	113
6.3.6. Data uncertainty .....	114
6.4. Final remarks .....	114
6.4.1. Research implications .....	114
6.4.2. Policy implications .....	115
6.5. References.....	115
Summary .....	118
Samenvatting.....	121
Acknowledgements.....	125
Curriculum Vitae .....	126
Publications.....	127
