Controlled human infection models as a tool for malaria and schistosomiasis vaccine research

PROEFSCHRIFT

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 10 juni 2021
klokke 11.15 uur

door
Maria Catharina Cornelia Langenberg
geboren te Tholen in 1985

Promotores:

Prof. Dr. M. Roestenberg

Prof. Dr. M. Yazdanbakhsh

Leden promotiecommissie:

Prof. Dr. M.C. de Vries

Dr. P van Genderen (Erasmus Medisch Centrum, Rotterdam)

Prof. Dr. A.F. Cohen

Prof. Dr. M. van Vugt (Universiteit van Amsterdam, AMC-UvA, Amsterdam)

Table of Contents

Chapter 1	General introduction	7
Part I:	Potential of the controlled human malaria infection model	
Chapter 2	Infectivity of <i>Plasmodium falciparum</i> sporozoites determines emerging parasitemia in infected volunteers	21
Chapter 3	Controlled human malaria infection with graded numbers of <i>Plasmodium falciparum</i> NF135.C10- or NF166.C8- infected mosquitoes	51
Chapter 4	A double-blind, placebo-controlled phase 1/2a trial of the genetically attenuated malaria vaccine PfSPZ-GA1	61
Part II:	Development of a controlled human schistosomiasis infection model	
Chapter 5	Establishing the production of male <i>Schistosoma mansoni</i> cercariae for a controlled human infection model	87
Chapter 6	Katayama syndrome without <i>Schistosoma mansoni</i> eggs	101
Chapter 7	A controlled human <i>Schistosoma mansoni</i> infection model to advance novel drugs, vaccines and diagnostics	109
Part III:	Improvement of controlled human infection models	
Chapter 8	Are placebo controls necessary in controlled human infection trials for vaccines?	145
Chapter 9	Summarising discussion	161
Addendum:		
	Nederlandse samenvatting	182
	Dankwoord	188
	Curriculum Vitae	190
	List of publications	191
