**Social Dimensions of Crane and Wetland Conservation in African Rural Landscapes**

**Mabhachi**

A crowned crane is shown standing in a field of tall, green grass. The bird has a distinctive black cap with a white patch around its eye, a large red throat, and a prominent, spiky crest of golden-brown feathers. Its body is primarily grey with a white patch on its wing and a yellowish-buff tail. The background is a dense thicket of green grass and some dried, brown stalks.
