Young suns and infant planets

Probing the origins of solar systems

PhD Thesis
Alexander Julian Bohn

Young suns and infant planets

Probing the origins of solar systems

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 22 september 2021
klokke 16:15 uur

door

Alexander Julian Bohn

geboren te Würzburg, Duitsland
in 1993

Promotor:	Prof.dr. C.U. Keller	
Co-promotors:	Dr. M.A. Kenworthy	
	Dr.ir. F. Snik	
Promotiecommissie:	Prof.dr. H.J.A. Röttgering	Universiteit Leiden
	Prof.dr. I.A.G. Snellen	Universiteit Leiden
	Prof.dr. B.A. Biller	The University of Edinburgh
	Prof.dr. P.M. Hinz	University of California Santa Cruz
	Dr. Q.M. Konopacky	University of California San Diego
	Dr. A.-M. Lagrange	Université Grenoble Alpes

ISBN: 978-94-6419-262-9

A digital copy of this thesis can be found at <http://openaccess.leidenuniv.nl>

Cover: The front side of the thesis cover shows the multi-planet system that was detected around YSES 1. On the backside a circumstellar disk around Wray 15-788 is visualized. Based on observations collected at the European Organisation for Astronomical Research in the Southern Hemisphere under ESO programs 0101.C-0153(A) and 0104.C-0265(A).

Contents

Contents	iii
List of Figures	vii
List of Tables	xi
1 Introduction	1
1.1 The search for life in the Universe	1
1.2 The exoplanet revolution	5
1.2.1 Indirect detections of exoplanets	8
1.2.2 Direct detections of exoplanets	14
1.3 Formation of gas giant planets	27
1.3.1 Direct imaging surveys	28
1.3.2 Atmospheric characterization of directly imaged planets	30
1.4 The Young Suns Exoplanet Survey	31
1.5 Thesis outline	33
2 A multiplicity study of transiting exoplanet host stars	37
2.1 Introduction	39
2.2 Observations	40
2.3 Data reduction	41
2.4 Results and analysis	44
2.4.1 Determining consistent ages for the exoplanet host stars	44
2.4.2 Characterisation of CCs	44
2.4.3 Multiplicity rate	62
2.4.4 Detection limits	62
2.5 Discussion	66
2.5.1 Multiplicity rate	66
2.5.2 Hot Jupiter host stars	66
2.5.3 Correlation between stellar multiplicity and exoplanet eccentricities	68
2.6 Conclusions	68
2.A Observational setup	69
2.B Individual detection limits	69

3 Discovery of a directly imaged disk around the Sco-Cen member Wray 15-788	79
3.1 Introduction	81
3.2 Observations	81
3.2.1 Classical imaging	83
3.2.2 Dual-polarization imaging	83
3.3 Data reduction	84
3.3.1 Classical imaging	84
3.3.2 Dual-polarization imaging	85
3.4 Observational results	85
3.4.1 CI data	86
3.4.2 DPI data	86
3.5 Analysis	87
3.5.1 Association of Wray 15-788 with HD 98363	87
3.5.2 SED modeling	89
3.5.3 Imaging data	90
3.6 Discussion	98
3.6.1 SED analysis	98
3.6.2 Disk morphology	100
3.6.3 Comparison with HD 98363	101
3.7 Conclusions	101
3.A Reference star library	102
3.B Other reduction strategies	104
3.B.1 CI data	104
3.B.2 DPI data	105
4 Detection of a directly-imaged planetary mass companion around YSES 1	107
4.1 Introduction	108
4.2 Observations	108
4.2.1 X-SHOOTER	110
4.2.2 SPHERE	110
4.2.3 NACO	112
4.3 Data reduction	112
4.3.1 X-SHOOTER data	112
4.3.2 SPHERE data	113
4.3.3 NACO data	113
4.4 Results and analysis	114
4.4.1 Stellar properties	114
4.4.2 Companion properties	116
4.4.3 Detection limits	122
4.5 Discussion	125
4.5.1 Companion properties	125
4.5.2 Comparison to other directly imaged sub-stellar companions .	126
4.5.3 Formation scenarios	127
4.6 Conclusion	128
4.A Proper motion analysis of other point sources	129
5 Two directly imaged planets around the young, solar analog YSES 1	131
5.1 Introduction	132

5.2	Observations and data reduction	132
5.3	Results and analysis	133
