## ACKNOWLEDGEMENTS

As the authors discussed in this dissertation have experienced, publishing a book about fish can be an arduous task. That this book on fish books has now arrived is thanks to many people, who it is my pleasure to thank here.

One of the best parts about writing a PhD on this topic has been meeting the people who told me about fish they had encountered in a sixteenth-century commonplace book in the British Library, an eighteenth-century printed work of Caribbean fish, or other piscine finds. I thank all those who have shown interest in my project, asked questions, and shared sources. It is being surrounded by such a variety of people with boundless enthusiasm for the past and its many (many) manifestations that makes being a historian so rewarding.

My gratitude goes out to Paul J. Smith for always making time whenever I knocked on his office door, and for sharing his virtually encyclopedic knowledge of early modern history. Eric Jorink never made me lose sight of the broader questions and knows perfectly well where the most substantive scholarly conversations take place: on the beach. Nadine Akkerman offered a model of historical acumen and exactitude which I still strive to attain someday. Together, they made an invaluable supervisory team. I am also indebted to my fellow project members, Florike Egmond, Marlise Rijks, Sophia Hendriks and Robbert Striekwold for stimulating exchanges. This research has benefited greatly from my having shared an office with Robbert, for whose ever willingness to have a critical look at my work I am very thankful. Martien van Oijen adeptly answered any ichthyological questions.

It was wonderful timing that my project started in the same year as the Making Visible research project on the visual practices of the early Royal Society at CRASSH. Sachiko Kusukawa, Felicity Henderson, Sietske Fransen and Katie Reinhart have generously shared their insights and I thank them for their warm welcome when visiting Cambridge. The Lisa Jardine Research Award of the Royal Society allowed me to spend one delightful August carrying out archival research in London. I want to thank Virginia Mills for introducing me to the

Royal Society archives. I am grateful to Isabelle Charmantier for receiving me at the Linnean library, and James Maclaine for accommodating my research in the Natural History Museum.

The Dr. Liselotte Kirchner Fellowship of the Frankesche Stiftungen in Halle an der Saale gave me the opportunity to peruse unique archival materials in their well-stocked library. I have much appreciated Holger Zaunstöck and Markus Berger's hospitality and extensive historical knowledge. Meike Knittel kindly invited me to a workshop of her research group at the Museum für Naturkunde and offered valuable comments. Marna Schneider guided me around Berlin's archives. My heartfelt thanks to the staff of all the libraries, archives and museums that I have consulted in the past years, without whom this research could not have been done.

Central have been the two summer schools organized by Dominik Hünninger, Marie Luisa Allemeyer and Christian Vogel of the Zentrale Kustodie in Göttingen. The insightful feedback of my referents, Emma Spary and Joachim Rees, as well as the general discussions among the participants have been instrumental in shaping my research. I have hardly attended a conference since without finding at least one of these brilliant participants there; I look forward to future encounters.

While it is impossible to name everyone with whom I had engaging conversations about my dissertation, I would like to thank Philippa Hellawell, Pete Langman, Simon Rebohm, Karsten Hommel, Stéphane Schmitt, Hans Aili, Anita Guerrini, Emma Mojet, Sjang ten Hagen, Jessie Wei-Hsuan Chen, Wouter de Vries, Ruben Verwaal, Azadeh Achbari, Jorrit Smit, Jan Overwijk, Eulàlia Gassó Miracle, Esther van Gelder, Bert Theunissen and Frans van Lunteren. Mathijs Boom, Marieke Hendriksen, and Wijnand Mijnhardt offered incisive comments on versions of chapters. Many thanks are due to Hilke Hoogenboom for meticulous translation work, and to Pete Langman for excellent editing.

Several communities were constants during this trajectory. The Huizinga Institute always afforded the necessary historical breadth; I look back fondly on debates within the PhD council on the future of cultural history. I much enjoyed being part of the editorial team at *Isis* Journal beside my research and it

has been formative to contemplate good scholarly practices with Floris Cohen, Desiree Capel, Ad Maas, and Huib Zuidervaart, as well as my fellow assistants, especially Lara Bergers. The Leiden University Centre for the Arts in Society (LUCAS) formed a lively center of researchers and staff; I particularly thank Viola Stoop, Lisanne Wepler, Bareez Majid and Lieke Smits for having been great and generous colleagues.

Friends and family made me stay afloat in the past few years. Thank you, Sophie, Lisanne, Sarah, Frédérique, and Nina. For the true kindness, involvement and encouragement of my parents in any of my endeavours I continue to be beyond grateful. And then, Sven. The best observations remain his, and his affection, patience and wit make all the difference.

## CURRICULUM VITAE

Didi van Trijp was born in Roosendaal in 1991. After graduating from Gymnasium Juvenaat in Bergen op Zoom, she ventured to Utrecht in 2009. Here, she studied History. She took part in the university-wide honours course Descartes College and spent the final part of her bachelor's studies at University of California, Berkeley. Upon completing these studies in 2013, she enrolled in the research master History and Philosophy of Science at Utrecht University from which she graduated *cum laude*. As part of her training, she went to the Max-Planck Institute for the History of Science in Berlin.

In 2015, she applied to write a PhD thesis in the history of fishes at Leiden University. This research was part of the project 'A New History of Fishes. A Long-Term Approach to Fishes in Science and Culture, 1550–1880' financed by NWO. Complementary funding to conduct research in various archives, libraries and museums abroad has come from the Lisa Jardine Award of the Royal Society of London and the Dr. Liselotte Kirchner Fellowship of the Francke Foundations in Halle an der Saale. She has published in *Renaissance Studies*, *Notes and Records of the Royal Society*, and *Isis*. Besides this, she developed and taught a course for bachelor students of Leiden University on the topic of natural historical texts and illustrations.

Since June 2021, she works as curator of the Nature and Technology collections at the Museon in The Hague, where she aims to use her background in the history of science to preserve and tell stories about the cultural and social aspects of science and technology. In 2022, she will take up a two-month research fellowship at the Science History Institute in Philadelphia. Her exhibition on early modern fish books in the Boekenkabinet of Teylers Museum, based on her doctoral research, is scheduled to open in spring of that same year.
