# Content

<b>Chapter 1</b>	<b>General introduction</b>	9
	1.1 Depression in women	10
	1.2 The female hormonal status and its implications for onset and course of mood disorders	11
	1.3 The menstrual cycle	12
	1.4 Oral contraceptives	13
	1.5 Stress response system: HPA axis and clinical consequences of chronic stress	15
	1.6 The female reproductive system and the stress response system interact	17
	1.7 The corticosteroid receptors	18
	1.8 The human MR (NR3C2) gene and the MR haplotype	21
	1.9 This PhD project	24
<b>Chapter 2</b>	<b>Oral contraceptives may alter the detection of emotions in facial expressions</b>	31
<b>Chapter 3</b>	<b>Mineralocorticoid receptor haplotype, oral contraceptives and emotional information processing</b>	41
<b>Chapter 4</b>	<b>Mineralocorticoid receptor haplotype moderates the influence of oral contraceptives and menstrual cycle on emotional information processing</b>	61
<b>Chapter 5</b>	<b>Mineralocorticoid receptor haplotype, estradiol, progesterone and emotional information processing</b>	75
<b>Chapter 6</b>	<b>Oral contraceptives positively affect mood in healthy PMS-free women: a longitudinal study.</b>	97
<b>Chapter 7</b>	<b>Influence of mineralocorticoid receptor haplotype and female hormonal status on resting-state electroencephalography</b>	117

<b>Chapter 8</b>	<b>General discussion</b>	137
	8.1 Aim of this thesis	138
	8.2 Main effects of the female hormonal status	138
	8.3 Main effects of MR gene variation	145
	8.4 Main outcomes of the interaction between MR gene variation and the female hormonal status	151
	8.5 Methodological considerations and suggestions	156
	8.6 Final conclusions	163
<b>Chapter 9</b>	<b>References</b>	168
	<b>English summary</b>	193
	<b>Dutch summary</b>	204
	<b>About the author &amp; Publications</b>	216
	<b>Dankwoord</b>	218

the 1990s, the number of people with a diagnosis of schizophrenia has increased in many countries (1).

There is a growing awareness of the need to improve the quality of life of people with schizophrenia. The World Health Organization (WHO) has developed a number of instruments to measure the quality of life of people with schizophrenia (2). The WHO Quality of Life Scale (WHOQOL) is one of the most widely used instruments (3).

The WHOQOL is a self-rated questionnaire that assesses the quality of life of people with schizophrenia (4).

The WHOQOL is a self-rated questionnaire that assesses the quality of life of people with schizophrenia (5).

The WHOQOL is a self-rated questionnaire that assesses the quality of life of people with schizophrenia (6).

The WHOQOL is a self-rated questionnaire that assesses the quality of life of people with schizophrenia (7).
