Exploring deep learning for intelligent image retrieval
Chen, W.
Acknowledgements

This thesis is a reward for my academic journey, which is challenging, encouraging, and memorable. Indeed, my PhD journey would not have been possible without the support and guidance from my supervisors, and encouragement from family, colleagues, and friends.

First of all, I would like to express my gratitude to my supervisors, Professor Michael Lew and Professor Aske Plaat, who gave me the opportunity to study at the MediaLab. It is my great honor to work with you throughout my doctoral studies. What I have learned is not only the specialized knowledge in the field of computer vision and multimedia but also the spirit of being an independent academic researcher. Thank you for your supervision and insightful suggestions during my doctoral studies.

I would like to deliver my appreciation to Dr. Erwin Bakker. Erwin gave me a lot of inspiration for each of my presentations. Also, he gave me many constructive suggestions and comments for each of my paper submissions.

I would also like to thank Hyowon Kim for numerous helpful suggestions for phrasing and editing my papers.

I would like to express my appreciation to my doctorate committee members: Professor Tat-Seng Chua, Professor Boudewijn P.F. Lelieveldt, Professor Thomas Bäck, Dr. Erwin Bakker, and Dr. Katy Wolstencroft. They reviewed my thesis carefully and gave me insightful comments and suggestions.

My special appreciation goes to my Chinese supervisor Professor Weiping Wang. I am very grateful for his continuous support for my Master study. I would like to express my gratitude to Professor Li Liu, for your encouragement and support, helping me to overcome the difficulties in my research.

I would like to express my gratitude to my colleagues at the MediaLab: Yanming Guo, Yu Liu, Theodoros Georgiou, Nan Pu, and Mingrui Lao. Yanming Guo helped me a lot when I first arrived at Leiden University. I was also inspired by the discussions with Yu Liu, Nan Pu, and Mingrui Lao. Thank you for sharing your knowledge. I also enjoyed and benefited from the discussions and suggestions with Theodoros Georgiou, Nan Pu, and Mingrui Lao.

I would like to express my overwhelming gratitude to Zhihan Zhao (Shui Bao). During 1440 days-and so much more, we accompany, encourage, cheer each other. To be a better you is to be a better me. We feel happy, angry, moved, frustrated. At this moment, every second is memorable. You fill my world with light and with joy. Most importantly, I believe in destiny: from the Hubrecht Institute to Leiden University Medical Center, from Utrecht to Leiden. I cherish and am grateful!
I would like to express my deepest appreciation to my parents for their unconditional love and support. When I became depressed during my doctoral research, I was always encouraged. When I tried something new, I was always supported. I learned perseverance and persistence from them. I hope they are happy and healthy. Moreover, I share my appreciation to my older brother, sister-in-law, and younger sister.

Last but not least, I feel lucky to have made so many Chinese friends in Leiden and in the Netherlands. The days with them made my doctoral studies more enjoyable and less stressful.

Curriculum Vitae

Wei Chen was born in Guizhou, China on July 16, 1991. In 2010, he started his bachelor’s study at Wuhan University in Wuhan, Hubei, China, and received his bachelor’s degree in 2014. After that, he started his master’s study at National University of Defense Technology in Changsha, Hunan, China, and obtained his master’s degree in 2016 under the supervision of Prof. Dr. Weiping Wang.

In September 2017, he started his PhD research supported by the China Scholarship Council (CSC No. 201703170183) and worked at the MediaLab in the Leiden Institute of Advanced Computer Science (LIACS), Leiden University, the Netherlands, under the supervision of Prof. Dr. Michael Lew and Prof. Dr. Aske Plaat. Wei Chen’s research interests include computer vision, multimedia retrieval and deep learning. He is focusing on image retrieval in the context of incremental learning. He has published papers in international journals and conferences, including IEEE Transactions on Multimedia, Pattern Recognition, Neurocomputing, CVPR, ACM MM, ICME, BMVC, etc. He also serves as a reviewer for some conferences and journals, such as IEEE Transactions on Multimedia, Pattern Recognition, Neurocomputing, ICME, and BMVC.
