# High-contrast imaging polarimetry of exoplanets and circumstellar disks

Rob Gerardus van Holstein

#### Cover design:

Bottom right: Total-intensity image of the star DH Tau A and its substellar companion DH Tau B. Top left: Linearly polarized intensity image of the same system, revealing the circumstellar disk of DH Tau A and the polarization signal from DH Tau B that indicates the presence of a disk around this companion. The images are presented in Chapter 5 and were taken with SPHERE-IRDIS at ESO's Very Large Telescope located on Cerro Paranal.

## High-contrast imaging polarimetry of exoplanets and circumstellar disks

Proefschrift

ter verkrijging van de graad van doctor aan de Universiteit Leiden, op gezag van rector magnificus prof. dr. ir. H. Bijl, volgens besluit van het college voor promoties te verdedigen op woensdag 13 oktober 2021 klokke 11.15 uur

door

#### Rob Gerardus van Holstein

geboren te Delft, Nederland in 1990

Promotor:	Prof. dr. C. U. Keller	
Co-promotor:	Dr. ir. F. Snik	
Promotiecommissie:	Prof. dr. H. J. A. Röttgering (voorzitter)	Universiteit Leiden
	Prof. dr. I. A. G. Snellen (secretaris)	Universiteit Leiden
	Prof. dr. H. M. Schmid	ETH Zürich
	Prof. dr. I. E. E. Kamp	Rijksuniversiteit Groningen
	Prof. dr. M. K. Kupinski	University of Arizona
	Dr. J. Milli	Université Grenoble Alpes

4	Con SPF	IDINING ANGULAR DIMERENTIAL IMAGING AND ACCURATE POLARIMETRY WITH	95
	4 1	Introduction	96
	4.2	Measurement technique	98
	43	Observations	99
	44	Data reduction	100
		$4.4.1$ Construction of total-intensity $L_0$ - and $L_0$ -images	102
		4.4.2 Construction of Stokes <i>Q</i> - and <i>U</i> -images	102
	4.5	Results	108
	4.6	Discussion	109
	4.7	Conclusions	111
	Refe	erences	111
5	A sı	rvey of the linear polarization of directly imaged exoplanets and brown	
	dwa	rf companions with SPHERE-IRDIS: First polarimetric detections	
	reve	aling disks around DH Tau B and GSC 6214-210 B	113
	5.1		114
	5.2	Target sample and observations	116
		5.2.1 Target sample	116
		5.2.2 Observations	117
	5.3	Data reduction	120
	5.4	Extraction of polarization of companions: Detection of polarization of DLI Tau P	122
	5 5		122
	5.5	5.5.1 Detection of intrinsic polarization of DU Tay P	129
		5.5.1 Detection of intrinsic polarization of GSC 6214 P	127
		5.5.2 Detection of interstellar polarization from 1DVS 11600 P	134
		5.5.4 Upper limits on polarization of other companiens	120
		5.5.4 Opper minus on porarization of other companions	130

		555	Detection of circumstellar disks of DH Tau GO Lup PDS 70			
		5.5.5	B Pic and HD 106906	140		
	5.6	Model	ing of polarization from circumsubstellar disks	143		
		5.6.1	Setup of the radiative transfer model	143		
		5.6.2	Origin of the spatially integrated polarization	144		
		5.6.3	Dependence on the inner radius and surface density	146		
	5.7	Discus	ssion	148		
		5.7.1	Circumsubstellar disks, rotational periods, and formation of			
			DH Tau B, GSC 6214 B, and GQ Lup B	148		
		5.7.2	Circumsubstellar disks of 1RXS J1609 B, HD 106906 b, and			
			PDS 70 b	150		
		5.7.3	Atmospheric asymmetries of the companions	151		
		5.7.4	Confirmation and further characterization of the disks of DH Tau B			
			and GSC 6214 B	152		
	5.8	Summ	ary and conclusions	153		
	5.A	Cosme	etic correction of spurious structure in Q- and U-images	155		
	5.B	System	natic errors due to bad pixels	155		
	5.C	Retrie	val of total intensity through ADI: Upper limit on polarization of			
		$\beta$ Pic t	)	157		
	5.D	Retrie	val of total intensity through PSF fitting: Upper limit on			
		polariz	zation of HD 19467 B	161		
	5.E	Contra	st curve of $\beta$ Pic data	165		
	Refe	rences		166		
6	Circ	ulor no	Jorimetric imaging at planetary system scales by backing			
U	SPH	SPHERE-IRDIS: Full-Stokes observations of the asymmetric nebula				
	surr	oundin	g VY CMa	171		
	6.1	Introd	uction	172		
	6.2	Obser	ving scheme for measuring circular polarization	174		
		6.2.1	SPHERE-IRDIS' polarimetric mode for linear polarimetry	175		
		6.2.2	Observing scheme for measuring circular polarization	178		
	6.3	Test ol	bservations of VY CMa	179		
	6.4	Instru	nental polarization effects of circular-polarization measurements	180		
		6.4.1	Mueller matrix model and setup of calculations	181		
		6.4.2	Polarimetric efficiency	181		
		6.4.3	Instrumental polarization	184		
		6.4.4	Crosstalk	185		
		6.4.5	Effect of uncertainty of retardance of UT and M4	186		
	6.5	Data r	eduction	187		
	6.6	Calibr	ation of crosstalk from data of VY CMa	192		
		6.6.1	Identification of spurious signals due to uncorrected crosstalk	192		
		6.6.2	Construining actual of LIT and M4 from data			
			Constraining relardance of UT and M4 from data	193		
	6.7	Linear	and circular polarization of VY CMa and its nebula	193 196		
	6.7	Linear 6.7.1	and circular polarization of VY CMa and its nebula	193 196 196
