Table of contents

Introduction

Chapter 1

General introduction

Page 8

Part I: The type of health-related quality of life (HRQoL) in glioma patients

Chapter 2

Research objectives, statistical analyses and interpretation of health-related quality of life data in glioma research: a systematic review

Page 18

Chapter 3

Measuring change in health-related quality of life: the impact of different analytical methods on the interpretation of treatment effects in glioma patients

Page 63

Part II: Health-related quality of life (HRQoL) information in glioma patients: answering clinical relevant questions

Chapter 4

The added value of health-related quality of life (HRQoL) as a prognostic indicator of overall survival and progression-free survival in glioma patients: a meta-analysis based on individual patient data from randomized controlled trials

Page 77

Chapter 5

Symptom clusters in newly diagnosed glioma patients: which symptom clusters are independently associated with functioning and global health status?

Page 101

Chapter 6

Factors associated with health-related quality of life (HRQoL) deterioration in glioma patients during the progression-free survival period

Page 123

Chapter 7

Calculating the net clinical benefit in neuro-oncology clinical trials by combining survival and health-related quality of life data using two methods: quality adjusted survival effect sizes (QASES) and Joint modelling (JM)

Page 147

Part III: General discussion and future directions

Chapter 8

Summary, general discussion and future directions

Page 167

Appendix

Samenvatting, list of publications, dankwoord, curriculum vitae
