Acknowledgments

This work is the result of several years of practice and research. Not a single line would have been possible without the constant encouragement of many caring and incredible people.

First of all, I would like to express my deepest gratitude to my supervisors: Dr. Pablo Mendes de Leon, Professor of Air and Space Law at Leiden University, and Prof. Dr. Vincent Correia, co-Director of the *Institut Droit, Espaces et Technologies* of the Paris Saclay University, whose clear guidance and encouragement were invaluable to the process of this doctoral dissertation. My sincere gratitude also goes to the staff of the Institute of Air and Space Law, in particular Mrs Natascha Meewisse who skilfully guided me through the PhD related processes. I should also mention the outstanding members of my Doctorate committee and my incredible paranymphs Charlotte and Davinia Dusa.

Next, I would like first to thank to my family and particularly my parents, Danielle Bloem and Ghéorghii Vladimirovitch Grigorieff, for having taught me the importance of academic rigour, and who also initiated me from a young age to law, aviation and languages.

Further, I wish to thank all those who helped me during this extraordinary experience. Although I may not list all of them, I truly appreciated their assistance and friendship. Special thanks go to the Thijssen family for translation of the summary into Dutch.

Finally, I take full responsibility for any errors, omissions or inaccuracies which may be found in this work.
