superconductors**

Josephson and noise scanning tunneling microscopy on conventional, unconventional and disordered superconductors

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties,
te verdedigen op donderdag 25 november 2021
klokke 13:45 uur

door

Damianos Chatzopoulos

geboren te Kreta (Griekenland)
in 1992

Promotores: Dr. M.P. Allan
Prof. dr. J. Aarts

Promotiecommissie: Dr. N. Hauptmann (Radboud University)
Dr. B. Sacépé (CNRS Institut Néel, Grenoble, France)
Prof. dr. E. R. Eliel
Prof. dr. ir. S. J. van der Molen
Prof. dr. J. M. van Ruitenbeek

Casimir PhD series, Delft-Leiden 2021-25.
ISBN 978-90-8593-491-2

An electronic version of this dissertation is available at
<https://openaccess.leidenuniv.nl>

This work originates as part of the research programme of the Foundation for Fundamental Research on Matter (FOM), and falls as of April 1, 2017 under the responsibility of Foundation for Nederlandse Wetenschappelijk Onderzoek Instituten (NWO-I), which is part of the Dutch Research Council (NWO).

The cover shows an artist's impression of Cooper pairs flowing on an edge resembling a superfluid.

Contents

Summary	xi
Samenvatting	xiii
1 Introduction	1
1.1 Superconductivity: it is all about pairing.	2
1.1.1 Imaging the superfluid using Josephson microscopy . . .	3
1.1.2 Charge detection and noise microscopy	5
1.2 Thesis outline	7
References	9
2 Josephson and noise scanning tunneling microscopy	13
2.1 Scanning tunneling microscopy	14
2.2 Josephson scanning tunneling microscopy	16
2.2.1 Energy scales in Josephson STM	18
2.2.2 The RCSJ model	20
2.2.3 The IZ model	20
2.2.4 $P(E)$ theory	22
2.2.5 Experimental procedures	25
2.3 Noise scanning tunneling microscopy.	27
2.3.1 STM noise circuitry	28
2.3.2 Extracting the shot noise	30
References	36
3 Inhomogeneous superfluid density in Fe(Te,Se)	41
3.1 Introduction	42
3.2 Theory of tunneling between superconductors	42
3.3 Josephson tunneling on Fe(Te,Se).	44
3.4 Mapping the superfluid in Fe(Te,Se).	46
3.5 Superfluid density-quasiparticle strength correlation	48
3.6 Conclusions and outlook	49
References	50
4 Impurity states in Fe(Te,Se)	53
4.1 Introduction	54
4.2 Methods	54
4.3 Detection of in-gap state in $\text{FeTe}_{0.55}\text{Se}_{0.45}$	56
4.4 Spatial dispersion of the in-gap state	58
4.5 YSR impurity states	58
4.6 Tuning the energy of the in-gap state using the tip.	60

4.7	Microscopic origin	60
4.8	Gate-tunable single-impurity Anderson model	63
4.9	Conclusions and outlook	64
	References.	66
5	Noise doubling in Pb-I-Pb junctions	73
5.1	Introduction.	74
5.2	Josephson scanning tunneling microscopy	76
5.3	Scanning tunneling noise microscopy	78
5.4	Noise doubling due to Andreev reflections	78
5.5	Spatially resolved noise doubling	80
5.6	Conclusions and outlook	80
	References.	82
6	Noise above T_C in a disordered superconductor	85
6.1	Introduction.	86
6.2	Charge detection using shot noise.	87
6.3	Experimental methods.	88
6.4	Shot noise enhancement above T_C	90
6.5	Conclusions and outlook	93
	References.	94
7	Conclusions and outlook	99
	References.	102
A	Appendix: Inhomogeneous superfluid density in Fe(Te,Se)	103
A.1	Sample preparation and measurement	104
A.2	Critical current as a function of normal-state conductance.	104
A.3	Effect of inhomogeneous R_N	106
A.4	Bogoliubov quasiparticle interference.	108
	References.	110
B	Appendix: Impurity states in Fe(Te,Se)	113
B.1	Anderson impurity in a (zero-bandwidth) BCS superconductor	114
B.2	Azimuthally-averaged radial profiles and spatial mapping of the YSR resonances	117
B.3	Noise spectroscopy	117
B.4	Estimation of the potential drop in the vacuum barrier be- tween tip and sample	118
B.5	Estimation of the charging energy U of the impurity and the potential change on it due to the tip movement.	120
B.6	Statistics.	121
