Statistical physics and information theory for systems with local constraints

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 1 december 2021
klokke 10.00 uur

door

Qi Zhang

geboren te Mianyang (Sichuan), China
in 1989

Promotors: Dr. D. Garlaschelli
Prof. dr. E. R. Eliel

Promotiecommissie: Prof. dr. M. R. H. Mandjes (University of Amsterdam)
Dr. R. Mastrandrea (IMT Advanced School Lucca, Lucca, Italy)
Dr. T. Squartini (IMT Advanced School Lucca, Lucca, Italy)
Prof. dr. J. Aarts
Prof. dr. W. Th. F. den Hollander

Casimir PhD series, Delft-Leiden 2021-30
ISBN 978-90-8593-496-7
An electronic version of this thesis can be found at
<https://openaccess.leidenuniv.nl>

This work was conducted at the Lorentz Institute for theoretical physics, Leiden University. The author was supported by a state scholarship program funded by the China Scholarship Council (CSC) and the Dutch Econophysics Foundation (Stichting Econophysics, Leiden, the Netherlands).

The cover shows a growing of constraint's number forming ensemble nonequivalence.

To My Family

Contents

1	Introduction	1
1.1	Statistical ensembles	2
1.2	Ensemble (non)equivalence	4
1.3	Information theory	6
1.4	Outline of this thesis	8
2	Ensemble nonequivalence and Bose-Einstein condensation in weighted networks	11
2.1	Introduction	12
2.1.1	Conjugate ensembles	12
2.1.2	Physical mechanisms for ensemble (non)equivalence	13
2.1.3	Mathematical definitions of ensemble (non)equivalence	14
2.1.4	The contribution of this chapter	15
2.2	Canonical and microcanonical ensembles of weighted networks	16
2.2.1	Weighted network ensembles	17
2.2.2	Canonical weighted network ensemble	18
2.2.3	Microcanonical weighted network ensemble	21
2.3	Equivalence and nonequivalence of weighted network ensembles	25
2.3.1	Relative entropy density	25
2.3.2	Relative fluctuations of the constraints	27
2.4	BEC in weighted networks	29
2.4.1	Bose-Einstein statistics in weighted networks	29
2.4.2	Core-periphery networks	32
2.4.3	Non-condensed phase	40
2.4.4	Condensed phase	46
2.4.5	Critical temperature: $T = T_c$	55
2.5	Conclusions	57
Appendix 2.A	Determinant of the covariance matrix	60
2.A.1	Non-condensed phase	60
2.A.2	Infinite-temperature limit	62
2.A.3	Condensed phase	63
2.A.4	Zero-temperature limit	65
3	Strong ensemble nonequivalence in systems with local constraints	67
3.1	Introduction	68
3.2	General formalism	70
3.2.1	Matrix ensembles	70
3.2.2	Global and local constraints	71
3.2.3	Soft constraints: canonical ensemble	73
3.2.4	Hard constraints: microcanonical ensemble	74

3.2.5	The thermodynamic limit	75
3.2.6	Ensemble (non)equivalence	77
3.3	Weak and strong ensemble nonequivalence	80
3.3.1	Relative entropy ratio	81
3.3.2	Global constraints	83
3.3.3	One-sided local constraints	88
3.3.4	Two-sided local constraints	97
3.4	Discussion and conclusions	107
Appendix 3.A	Global constraints	110
3.A.1	Binary matrices under a global constraint	110
3.A.2	Weighted matrices under a global constraint	112
Appendix 3.B	One-sided local constraints	115
3.B.1	Binary matrices under one-sided local constraints	116
3.B.2	Weighted matrices under one-sided local constraints	119
Appendix 3.C	Two-sided local constraints	121
3.C.1	Binary matrices under two-sided local constraints	122
3.C.2	Weighted matrices under two-sided local constraints	124
3.C.3	Determinant of the covariance matrix for two-sided local constraints	125
4	New information-theoretic bounds for systems with local constraints	131
4.1	Introduction	132
4.2	Ensemble described information sources	134
4.3	Information storage under ensemble nonequivalence	139
4.4	Ensemble nonequivalence and channel capacity	142
4.5	Conclusions	142
Appendix 4.A	ER model described information sources	143
Appendix 4.B	Matrix described information sources	145
4.B.1	Matrix with global constraint	145
4.B.2	Matrix with local constraints	147
5	Information theory with coupled sources under ensemble nonequivalence	149
5.1	Introduction	150
5.2	Ensemble described information sequences	151
5.2.1	Canonical ensemble description	153
5.2.2	Microcanonical ensemble description	154
5.3	Total correlations of information sequences	156
5.4	Classical information theory with ensemble description	158
5.5	Extensive number of constraints and ensemble nonequivalence	161
5.6	Information transmission with coupled sources	164
5.7	Conclusions	166
Appendix 5.A	Row local constraints and multivariate independence source	169
Appendix 5.B	Column local constraints and non-stationary process	171

Appendix 5.C	Coupled local constraints and multi-coupled process	173
Appendix 5.D	Homogeneous dependencies under different constraints	174
5.D.1	Global constraint t^*	174
5.D.2	Row local constraints	176
5.D.3	Column local constraints	177
6	Conclusions	179
