# Curriculum Vitae

I was born in 1989 in Sichuan, a province in Southwest China. I received my early education in this province, including primary, middle and high schools.

In 2009, I left my hometown and went to Chongqing for my undergraduate studies at Southwest University. At that time, I was trained as an automation engineer. I continued my master study in the Department of Computer Science at the same university but with a focus on complex networks under the supervision of Prof Yong Deng in 2014.

In 2016, I went to Leiden, the Netherlands, to start my PhD work under the supervision of Dr Diego Garlaschelli at the Lorentz Institute for Theoretical Physics at Leiden University. I spent five years researching systems with local constraints from the viewpoint of statistical physics and information theory.

# Acknowledgments

My Phd in Leiden is coming to an end, and I can not imagine what my life and research would be like without the support of so many people.

First, I would like to express my sincere gratitude to my supervisor Diego Garlaschelli. To me, what he has done in the past years is much more than mentoring a PhD student on specific projects. His patience and sensitivity showed me how to figure out physically important problems and develop exciting ideas with scientific rigour. Through his guidance, motivation, and training, I was transformed from being an engineer to become a physicist. Psychologically, his help always gave me the power to face the problems in my life and research. He always told me "Qi, don't worry, we will figure it out". The knowledge I have been learned from him taught me how to become a good physicist and a better person. It great honour to have him as my supervisor. I would also like to thank Prof. Eric Eliel for being my PhD promotor and kindly helping me go through all the necessary administrative procedures.

I also want to thank Tiziano for the discussions in Lucca when I tried to extend statistical ensembles with local constraints into information theory. I want to thank Alexandru and Hamed for their suggestions and comments on this thesis. I also want to thank Eric, Joseph and Peter for their help with my Dutch summary.

I would also like to thank other members of Diego's group: Assaf, Valerio, Elena, Andrea, Janusz, Maria, Pierfrancesco and Federica. I felt so lucky to be part of this wonderful team. I enjoyed all the discussions, conferences, dinners and outings we had together. I am indebted to the secretaries at the institute—Fran, Manon, and Marianne. Their assistance has made my work and life much easier. I would like to thank my friends and colleagues in the Physics and Astronomy institutes of Leiden: Ireth, Bahareh, Zhihong, Yujie, Weichun, Donggang, Xuxing, Zujia, Jiangnan, Junxiang, Xuechen, and Yuhan. Thanks for your help both in research and life.

In addition, I would like to thank my Chinese friends in Leiden: Enchen Zhou, Xiaoyu Wei, Tian Qin, Yang Deng, Hui Wang, Wei Yang, Jing Hu, Jing Wei, Ying Wang, Zhengzheng Zhang, Mengjie Shen and many others whose names are not listed here.

I want to thank my parents. Their unconditional support is always the solid backing in my life and work.

At last, I want to thank my dearest Meizhu. Her presence and love in the past ten years are the major source of encouragement for me.
