Exploring the edge

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 26 januari 2022
klokke 12:30 uur

door

Omar Contigiani
geboren te Montevarchi, Italië in 1992

Promotor: Prof.dr. Henk Hoekstra
Co-Promotor: Dr. Alessandra Silvestri

Promotiecommissie: Prof.dr. Huub Röttgering (Leiden University)
Prof.dr. Pieter Timotheus de Zeeuw (Leiden University)
Prof.dr. Koenraad Kuijken (Leiden University)
Dr. Matthieu Schaller (Leiden University)
Prof.dr. Buvhnesh Jain (University of Pennsylvania)
Dr. Chihway Chang (University of Chicago)

Contents

1	Introduction	1
1.1	The modern Universe	1
1.1.1	General relativity	2
1.1.2	Dark energy	4
1.1.3	Dark matter	7
1.2	The large-scale structure of the Universe	8
1.2.1	Linear perturbations	8
1.2.2	Spherical collapse and the edge of halos	10
1.3	Observations	11
1.3.1	Galaxies and baryons	11
1.3.2	Gravitational lensing	12
1.4	This thesis	13
2	Weak-lensing constraints on splashback around massive clusters	19
2.1	Introduction	20
2.2	Cluster lensing	24
2.2.1	Sample characterization	24
2.2.2	Tangential shear	25
2.2.3	Residual systematics	29
2.3	Splashback	30
2.3.1	Fitting procedure	30
2.3.2	Interpretation	32
2.4	Conclusions	34
2A	Noise covariance matrix	36
3	Splashback in symmetron gravity	45
3.1	Introduction	46
3.2	Density profile	47
3.3	Symmetron gravity	49
3.4	Spherical collapse with the symmetron	52

3.4.1	Field profile	53
3.4.2	Splashback	56
3.5	Discussion and conclusion	59
4	The mass-size relation of galaxy clusters	67
4.1	Introduction	68
4.2	Hydrangea	69
4.3	Splashback	72
4.3.1	Definition	72
4.3.2	Accretion	75
4.3.3	Anisotropy	78
4.4	The mass-size relation	81
4.5	Redshift evolution	82
4.6	Discussion and conclusions	84
4.6.1	The role of simulations	87
4.6.2	Next steps	89
5	Dynamical cluster masses from photometric surveys	99
5.1	Introduction	100
5.2	Data	102
5.2.1	KiDS	102
5.2.2	LRGs	103
5.3	Profiles	106
5.3.1	Galaxy profile	106
5.3.2	Weak lensing profile	107
5.4	Four ways to measure cluster masses	109
5.4.1	Splashback mass	109
5.4.2	Lensing mass	111
5.4.3	Supplementary mass measurements	112
5.5	Discussion	115
5.5.1	Gravitational constants	116
5.5.2	Future prospects	118
5.6	Conclusions	119
6	Learning how to surf: studies in gravitational-wave cosmology	133
6.1	Introduction	134
6.2	Lensing boost	136
6.2.1	Formalism	136
6.2.2	Observational consequences	141
6.2.3	Comparison to observations	143
6.3	The astrophysical background	144
6.3.1	Formalism	144

6.3.2	Forecast	147
6.4	Resolved events	151
6.4.1	Formalism	151
6.4.2	Forecast	157
6.4.3	Comparison with previous works	163
6.5	Conclusions	164
6A	Shot-noise for the background cross-correlation signal	165
6B	Cosmic variance of the background cross-correlation signal	166
Samenvatting		177
6.8	Moderne kosmologie	177
6.9	De rand en donkere energie	178
6.10	Dit proefschrift	179
Summary		181
6.11	Modern cosmology	181
6.12	The edge and dark energy	182
6.13	This thesis	183
List of publications		185
Curriculum vitae		187
