Curriculum Vitae

Yu Dong was born on January 15, 1988, in Shehong county, Sichuan province, China. After finishing secondary education in 2007, he began his bachelor study majoring in Machine Design Manufacture and Automation at the Ocean University of China, in Qingdao, China. He received a Bachelor of Engineering degree in Mechanical engineering in June 2011. In that same year, he started working as an assistant mechanical engineer in Haiyang CIMC offshore Co. Ltd, Yan Tai city. In 2014, he began his master study as a researcher at the State Key Laboratory of Cognitive Neuroscience and Learning at the Beijing Normal University, for which the neural mechanism of temporal prediction was investigated in a primate rhesus model. He graduated with a Master of Science with his thesis titled “*The study of temporal prediction, neural mechanisms and the relationship with microsaccade in macaque monkeys*” in 2017. In September 2017, he began as a PhD student at the Department of Otorhinolaryngology at the Leiden University Medical Center, Leiden, the Netherlands (supervisors Prof. Dr. Ir. J.H.M. Frijns, Dr. Ir. J.J. Briare and Dr. H.C. Stronks) with a focus on cochlear implants (2017-2021). The results of this study are described in the present thesis.

Acknowledgments

I would like to express my sincere appreciation to ones for their help, support and encouragement in my PhD study and writing the present thesis.

First and foremost, I would like to thank my promoter Johan Frijns, and supervisors Jeroen Briaire and Christiaan Stronks for your timely and patient support and guidance not only in implementing my scientific research but also in improving my language, tackling with difficulties encountered in life within these four years. Without you, I could not have achieved this much.

I also would like to express my thanks to all colleagues in the ENT department. All of you are always so helpful and warm-hearted which makes me feel at home. Many thanks to my sweet roomies, colleagues and friends Michael, Timo, Margriet, Klaas, Kimberly, Tirza, Dick, Constanza, Edward, Randy, Wouter, Juliette, Victor and so on. I am so happy being part of you and working with you. I have learned a lot from you in terms of critical thinking on many different things in research and daily life. I greatly enjoyed sharing different life experiences, drinking, having dinner, sailing, playing board games, having parties and best weekends together with you. In addition, great thanks to the German dolphin, Michael, for saving me out of the Dead Sea in Israel and teaching me how to swim.

I would like to sincerely thank my dear Chinese friends Fangfang, Wanbin, Wei Chen, Minkang, Guiying Wang, Chu Wenjing, Zhao Yang, Ding Ding, Hehui Li, Junjie Wu, Min Li and all my friends. Many thanks for your valuable friendship, mutual help and encouragement when I am in a foreign land. I enjoyed conversating, drinking, having dinner and playing games together with all of you. Thank you for your warm friendship that always helped me to get back to work full of energy!

Last but not least, I would like to thank my family for your support as always. My dear dad and mom, you have been continuously contributing so much to me that I can achieve the goals in each stage of my study. My dear brother, thanks for your support and encouragement and always

being with me! My dear girlfriend Sarah Wang, it is extremely fortunate to meet you and fall in love with you in the Netherland as we both graduated from Beijing Normal University without previously knowing each other. Many thanks for not only accompanying me over the last two years especially during the tough Covid-19 time but also taking care of me. Your love, tenderness and support help me go through huge difficulties in my PhD study and life. Here, I also would like to greatly thank Qingyu Meng for building the connection between me and Sarah.
