Photothermal Circular Dichroism Studies of Single Nanoparticles

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof. dr. ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 3 maart 2022
klokke 10:00 uur

door

Patrick Späth

geboren te Aalen, Germany
in 1990

Promotores:

Prof. dr. M. A. G. J. Orrit

Prof. dr. M. W. Beijersbergen

Promotiecommissie:

Prof. dr. S. Bals

(Universiteit Antwerpen)

Prof. dr. L. Kuipers

(Technical University Delft)

Prof. dr. J. Aarts

Prof. dr. J. M. van Ruitenbeek

Dr. W. Löffler

Some schematics of optical setups use components adapted from *ComponentLibrary* by Alexander Franzen, which is licensed under a CC BY-NC 3.0 Licence.

The present work is financially supported by the Netherlands Organization for Scientific Research and the Open Technology Program (TTW-OTP, Project No. 16008).

Für Nancy

"The strongest arguments prove nothing so long as the conclusions are not verified by experience. Experimental science is the queen of sciences and the goal of all speculation."
— ROGER BACON

Contents

1	Introduction	1
1.1	Optical properties of gold nanoparticles.	2
1.2	Chirality	2
1.2.1	Optical manifestation of chirality	3
1.2.2	Linear dichroism and circular dichroism	4
1.2.3	Magnetic circular dichroism	4
1.3	Photothermal effect.	5
1.4	Outline of this thesis	6
1.5	Contribution	7
	References	7
2	Circular dichroism measurement of single metal nanoparticles using photothermal imaging	11
2.1	Introduction	12
2.2	Method.	13
2.3	Results and discussion	16
2.4	Conclusion	21
2.5	Supplementary information.	22
2.5.1	Details of the experimental setup	22
2.5.2	Sample design and preparation	22
2.5.3	Numerical simulations	24
2.5.4	Measurement of linear dichroism on gammadions.	25
2.5.5	Characterization of nanospheres shape and size	26
2.5.6	Does linear dichroism influence photothermal circular dichroism?.	27
2.5.7	More measurements of circular dichroism of gold nanospheres	29
2.5.8	Line profiles of PT and PT CD signal of gold nanospheres	30
2.5.9	Temperature increase due to absorption of the heating and probe beams	31
	References	31
3	Photothermal circular dichroism of single nanoparticles rejecting linear dichroism by dual modulation	35
3.1	Introduction	36
3.2	Results and discussion	39
3.2.1	Simulations	39
3.2.2	Experimental results	40

3.3	Conclusion	46
3.4	Methods and experimental	46
3.4.1	Experimental setup	46
3.4.2	Data analysis	47
3.5	Supplementary information	47
3.5.1	Stokes representation of polarization	47
3.5.2	Experimental alignment procedure	47
3.5.3	Simulations	53
3.5.4	CD of gold nanoparticle dimers.	58
3.5.5	CD of a single gold nanoparticle in carvone with LD reference	58
3.5.6	Heat-induced reshaping.	59
3.5.7	Nanofabrication of single aluminium nanorods	60
	References	60
4	Correlated optical and TEM measurements of quasi achiral and "superchiral" gold nanoparticles	65
4.1	Introduction	66
4.2	Results and discussion	67
4.2.1	Chiral nanorods	67
4.2.2	Nominally achiral nanoparticles	70
4.3	Conclusion	73
4.4	Experimental	73
4.4.1	Sample preparation	73
4.4.2	g-factor analysis of optical measurements	74
4.4.3	Transmission electron microscopy and tomography	74
4.4.4	Quantification of asphericity	74
4.4.5	Hausdorff chirality quantification	74
4.4.6	Boundary element method simulations	75
4.4.7	Quantification of helicity	75
4.5	Supplementary information	77
4.5.1	Ensemble CD spectra of the S-enantiomer of chiral nanorods	77
4.5.2	Effect of defocusing on the CD g-factor	77
	References	78
5	Magnetic circular dichroism of superparamagnetic nanoparticles	81
5.1	Introduction	82
5.2	Results and discussion	84
5.3	Conclusion and outlook	87
5.4	Supplementary information	88
5.4.1	Correlated SEM images of nominally 200 nm particles.	88
5.4.2	PT of 20 nm magnetite particles	88
5.4.3	Calibration of magnetic field vs distance	90
5.4.4	Magnetic-field-dependent PT-CD curves	92
	References	93

6 Conclusion and outlook	97
Samenvatting	101
Curriculum Vitæ	103
List of Publications	105
Acknowledgements	107
