Freedom of Additional Signals on Genes:  
on the combination of DNA mechanics, genetics  
and translation speed

Freedom of Additional Signals on Genes:  
on the combination of DNA mechanics, genetics  
and translation speed

PROEFSCHRIFT

ter verkrijging van  
de graad van doctor aan de Universiteit Leiden,  
op gezag van rector magnificus prof.dr.ir. H. Bijl,  
volgens besluit van het college voor promoties  
te verdedigen op woensdag 6 april 2022

klokke 15.00 uur

door

**Martijn Zuiddam**

geboren te Leiderdorp

**Promotor:** Prof. dr. Helmut Schiessel  
**Promotiecommissie:** Prof. dr. Annick Lesne (Sorbonne Université, Paris, Frankrijk)  
Prof. dr. Enrico Carlon (Katholieke Universiteit, Leuven, België)  
Prof. dr. John van Noort  
Prof. dr. Luca Giomi  
Prof. dr. Jan Aarts

The work in this thesis was supported by the Delta ITP consortium, a program of the Netherlands Organisation for Scientific Research (NWO).

# Contents

<b>1</b>	<b>Introduction</b>	<b>9</b>
1.1	The genetic layer of information on DNA . . . . .	10
1.2	The mechanical layer of information on DNA . . . . .	10
1.3	Translation speed as a third layer of information . . . . .	14
1.4	Multiplexing genetics and mechanics in real genomes . . . . .	15
1.5	Overview . . . . .	16
<b>2</b>	<b>Physics behind the mechanical nucleosome positioning code</b>	<b>17</b>
2.1	Introduction . . . . .	17
2.2	Model . . . . .	20
2.3	Dinucleotide probabilities . . . . .	22
2.4	Bounds of dinucleotide probabilities . . . . .	24
2.5	The average neighbour energy approximation . . . . .	27
2.6	Results . . . . .	29
2.6.1	The dinucleotide probability . . . . .	29
2.6.2	The bounds on the probability . . . . .	30
2.6.3	Explaining the dinucleotide positioning rules . . . . .	31
<b>3</b>	<b>Shortest paths through synonymous genomes</b>	<b>39</b>
3.1	Introduction . . . . .	39
3.1.1	Overview . . . . .	41
3.2	Model . . . . .	41
3.3	Lowest and highest energy sequences . . . . .	43
3.4	The best positioned nucleosomes . . . . .	43
3.5	Lowest and highest energy on genes . . . . .	46
3.6	Nucleosome positioning on genes . . . . .	47
3.7	Conclusion . . . . .	50
<b>4</b>	<b>Multiplexing mechanical and translational cues on genes</b>	<b>51</b>
4.1	Introduction . . . . .	51
4.1.1	Introduction to nucleosome positioning . . . . .	52
4.1.2	Introduction to translation speed and cotranslational folding .	53
4.1.3	Overview . . . . .	54
4.2	Multiplexing of genetics and mechanics . . . . .	54
4.3	Multiplexing of genetics and translation speed . . . . .	55
4.4	Multiplexing three layers of information: genetics, mechanics and translation speed . . . . .	58
4.5	Genetically modified organisms . . . . .	59

---

4.5.1	Translation speed in host organisms . . . . .	59
4.5.2	Restoring all layers of information . . . . .	62
4.6	Conclusion . . . . .	63
<b>5</b>	<b>How mechanical information is multiplexed on the transcribed regions of protein-coding genes</b>	<b>65</b>
5.1	Introduction . . . . .	65
5.1.1	Introduction to transcription . . . . .	66
5.1.2	The role of nucleosomes in transcription . . . . .	66
5.1.3	Overview . . . . .	67
5.2	Multiplexing: Intraregional signals and interregional signals . . . . .	68
5.2.1	Intraregional signals . . . . .	68
5.2.2	Interregional signals . . . . .	68
5.3	Intraregional and interregional signals in a real genome . . . . .	69
5.3.1	Distinguishing the positioning signals by homogenizing . . . . .	70
5.3.2	Obtaining the strength of the positioning signals . . . . .	76
5.4	Signals on many animals . . . . .	77
5.5	Signals on plants . . . . .	81
5.6	Even the amino acid sequence contains nucleosome signals . . . . .	91
5.7	Exon intraregional signals: a function on DNA or mRNA? . . . . .	92
5.8	Conclusions and Outlook . . . . .	95
<b>A</b>	<b>The physics behind the mechanical nucleosome positioning code</b>	<b>97</b>
A.1	Energy contributions of twist and cross terms . . . . .	97
A.2	Validity of the average neighbour energy approximation . . . . .	98
A.3	Effect of temperature on the probability . . . . .	98
<b>B</b>	<b>Shortest paths through synonymous codons</b>	<b>103</b>
B.1	Definition of the energy . . . . .	103
B.2	Definition of the depth of a minimum . . . . .	104
B.3	The deepest possible minimum . . . . .	105
B.4	Graphs . . . . .	105
B.5	Create local minima on top of genes . . . . .	106
<b>C</b>	<b>Multiplexing mechanical and translational cues on genes</b>	<b>109</b>
C.1	Graph to obtain highest and lowest possible nucleosome energy . . . . .	109
C.2	Obtaining the highest and lowest possible nucleosome energy, incorporating translation speed . . . . .	110
C.3	Recovering the original nucleosome energy and translation speed landscapes in host organisms . . . . .	111
C.4	Genetically modified organisms: many genes . . . . .	112
<b>D</b>	<b>How mechanical information is multiplexed on the transcribed regions of protein-coding genes</b>	<b>119</b>
D.1	Data acquisition using Biomart . . . . .	119
D.2	List of animals used to obtain data . . . . .	122
	<b>Summary</b>	<b>133</b>

<b>Samenvatting</b>	<b>137</b>
<b>Curriculum Vitae</b>	<b>141</b>
<b>List of publications/manuscripts</b>	<b>142</b>
