Appendix 2 254
Appendix 3 256

Acknowledgements

The completion of this study has been a long journey. It could not be achieved without the support from the people to whom I would like to express my gratitude in the following:

I would like to express my deepest gratitude to my supervisor, Prof. Stefan Landsberger, for offering me the opportunity to carry out this PhD project and for providing valuable guidance and constant support to conduct it. He spends much time discussing the dissertation with me and rigorously points out the drawbacks of my thesis writing, which I learn a lot. I also would like to heartily thank my co-supervisor, Dr. Florian Schneider, for his incredible input during my PhD study. He makes enormous efforts to inspire me to think deeply and critically regarding academic topics, and he is always ready to help me by giving me the quickest feedback on every issue I raise, which contributes to putting this study on the right track.

I am grateful to my colleagues and friends at Leiden University for the delightful moments we shared together. My sincere thanks go to Chen Meiwen, Ma Xinrong, Nie Yuxi, Wang Wenxin, Wu Jinhua, and Zhang Xiaofei for their support and encouragement in my life and study. I cherish the beautiful memories with them. I thank Vincent Overdevest for the translation of the abstract. Besides, my thanks also go to my friends in Eindhoven where I have lived for ten years: Chen Delei, Huang Lu, Lin Ruyin, Lü Kangbo, Miao Wang, Wang Shuli, Wang Suwei, and Zhang Yang. We give each other mutual support and trust in our daily lives. I am proud to have friends like them. I especially thank Wu Yanjin for her design of the cover of this dissertation.

Most importantly, I want to dedicate this dissertation to my family, who have loved, supported, and encouraged me throughout the years. I thank my dearest parents, Zhang Jiliang and Nie Shiqun, who give me unconditional love and always support my small family and my study. I would like to extend my gratitude to my beloved husband, Cao Zizheng, who often shares his academic experience with me and helped me with the statistical analysis tool for this dissertation. In the end, I thank my two little sweethearts, Alicia and Albert, who train me to be a strong mother and bring me a lot of joy and excitement during my PhD life.

Notes on Conventions

1. Concerning Chinese names, I follow the Chinese custom to place family names before given names.

2. I keep the spellings and expressions of online Chinese data sources the same as the original
