Curriculum Vitae

Curriculum Vitae

Marie-Louise Martin was born May 17th, 1966 in Hayle, Cornwall, England. She grew up in England, Scotland and graduated from Notre Dame Grammar School, Leeds, West Yorkshire, UK in 1985. She obtained her Registered General Nurse (RGN) diploma at the Blackburn Royal Infirmary in 1990 and continued her training in intensive care nursing at the General infirmary of the University of Leeds, England. In 1992 she left the United Kingdom and settled in Amsterdam, The Netherlands. She worked as an intensive care nurse in the Vrije Universiteit Hospital, Amsterdam, the University Medical Centre Utrecht and the Sint Antonius Hospital, Nieuwegein. She obtained her diploma in diabetes nursing in 2002 and worked as a nurse manager and diabetes nurse in general practice till 2005. In 2003 she started her master's degree at the University of Applied Sciences in Utrecht and obtained her degree in Applied Nursing Science in 2005. Hereafter she became critical care nurse practitioner at the Sint Antonius Hospital Nieuwegein. For her research and implementation studies on the intensive care of the Sint Antonius Hospital Nieuwegein, she received the Frontiers in Critical Care Medicine Investigator Award in Amsterdam, The Netherlands 2008 and the Research Utilization Award in Indianapolis, USA 2009.

The research for this thesis was started in 2008 under the supervision of Prof. Dr. Mieke Grypdonck and Dr Roland van Linge. The research team was later joined by Prof. Dr. Leon Aarts and Leo Bras MD.

Since 2008 she is an executive board member of the International Philosophy of Nursing Society (IPONS)

From 2014 till 2018 she was the president of the Rho Chi at Large, the Dutch chapter of the international nursing society, Sigma Theta Tau International (STTI). She was the recipient of the Ethel Palmer Clarke Founders Award in 2017. From 2017-2021 she was the regional coordinator for the European region of the STTI. In December 2021 she was appointed Fellow of the Faculty of Nursing & Midwifery at the Royal College of Surgeons, Dublin, Ireland. Since January 2022 she has been a committee member of the International Council of Nurses Health Policy subgroup.

When deciding to step into the Ph-D line of inquiry, I was able to spend valuable time with Dr Roland van Lingen, sadly now deceased, a senior lecturer in innovation management at the faculty Nursing Science of the UMC in Utrecht. He as co-promotor was the best choice when wanting to shine the light on implementation science.

Professor Emeritus Mieke Grypdonk of the faculty Nursing Science, thank you for approaching the dean of the Utrecht University and securing permission to undertake my Ph-D at Utrecht. Also, for the many hours spent in your office and other places and for you to make time to travel back and forth from Belgium to join us at Leiden University.

I am grateful for Professor Leon Aarts from Leiden University Medical Centre to step in as promotor at a later stage and see the possibilities this line of nursing inquire would add to the profession.

As a critical nurse practitioner since 2005, it has been pioneering work to establish a nursing research /best practice culture and domain on the intensive care units at the St Antonius Hospital Nieuwegein, therefore making the Ph-D inquiry a possibility to undertake there. Thank you to Leo Bras Anesthesiologist-Intensivist/ Chief Medical Data Officer, who saw this potential and sought out a promotor when one was needed. He stood by my side when visiting Leiden University Medical Centre, read through my manuscripts, and acted as a reviewer.

I like to thank Ellen Tromp methodologist/epidemiologist at the St Antonius Hospital, for her guidance in helping me to see at times the data from another perspective and in providing help in analysing the abundance of computer data. I would like to thank Dr Huub Hanen member of the board of directors and chair of the medical ethics committee at St Antonius Hospital, Nieuwegein, who signed off initially on the ethical approval needed to carry out this research within the critical care setting and for the suggestions, he provided. This was the start of a journey and a mentorship I greatly appreciated, culminating in joining the medical ethics committee as a member later.

It is impossible to mention all the nurses and healthcare staff of the Intensive Care Units (ICUs) at St Antonius Hospital, Nieuwegein who over the clinical time span of my research were supportive, willing to go that extra mile to ensure that we were able to collect the data and ensure patient safety of the highest level on the Intensive care setting. Among them, I would like to mention Netty Koster who was integral in working with the patient data system, used to collect patient clinical data. Ben Peek Manager of the Critical Care & Theatre settings who gave the green light for this line of inquiry to be carried out on the Intensive Care Unit. Each in their specific ways gave strength and guidance, helping the process further to be able to report the research findings in publications. My nursing colleagues at St Antonius ICU were seminal in taking up the proposal for change in the way we introduced new nursing care items to the work floor. The execution of these tasks increased the autonomy of the nurses, willingness

to start this process of implementation and the demands of this study show how at St Antonius there is a nursing culture of inquiry and a readiness to engage.

Lastly but not least, I would like to express my warm thanks to my husband Guido Luiking for his unconditional support and sustaining unwavering belief in this research topic.
