Table of Contents

List of Tables	xiii
List of Figures	xv
Acknowledgements	xvii
Chapter 1 Introduction	1
1.1 Overview.....	2
1.2 Social and phonetic framework.....	3
1.2.1 Urbanization, migration, and language change	3
1.2.2 The <i>r</i> -sounds	4
1.3 Research questions	6
1.3.1 The interplay of language varieties, language users, and language attitudes.....	7
1.3.2 The social stratification of rhotacization.....	8
1.3.3 Linguistic and social constraints on rhotacization	9
1.4 Chapter-by-chapter overview	10
Chapter 2 General background	13
2.1 Rhotacization in general.....	14
2.2 Rhotacization in a syllable	16
2.2.1 Syllable structure.....	17
2.2.2 Rhotacization and segmental changes	18
2.3 Beijing Mandarin, Standard Chinese, and rhotacization	19
2.3.1 Chinese languages in general	19
2.3.2 Standard Chinese and language standardization in China....	20
2.3.3 Beijing Mandarin and rhotacization.....	22
2.4 Speech communities of Beijing.....	22
2.4.1 General introduction	22
2.4.2 Urbanization and migration.....	24
Chapter 3 Methodology	27
3.1 Participants	28
3.1.1 Age.....	28
3.1.2 Gender.....	29

3.1.3	Dialect background	29
3.1.4	Ethnicity	30
3.1.5	Summary	30
3.2	Participant recruitment	31
3.3	Data collection	32
3.4	Research design	33
3.4.1	Pair talking	33
3.4.2	Sociolinguistic survey	34
3.4.3	Respondents	34
3.5	Related issues	34
Chapter 4	Sociolinguistic Survey	37
4.1	Introduction	38
4.2	Method	39
4.3	Results	41
4.3.1	Beijing native respondents	41
4.3.2	Migrant respondents	51
4.4	Summary	59
Chapter 5	Frequency of Rhotacization Tokens	63
5.1	Introduction	64
5.2	Method	65
5.3	Results	66
5.4	Discussion and conclusion	73
Chapter 6	Frequency of Rhotacization Types	75
6.1	Introduction	76
6.2	Method	77
6.3	Results	78
6.4	Discussion and conclusion	86
Chapter 7	The Acoustics of Rhotacization in Mandarin	89
7.1	Introduction	90
7.2	Experiment 1: The occurrence of rhotacized rimes	91
7.2.1	Results	91
7.2.2	Summary	96
7.3	Experiment 2: Acoustics of the rhotacized rime <i>ianr</i>	97
7.3.1	Method	97

7.3.2	Results	101
7.3.3	Summary.....	109
7.4	Experiment 3: Duration of the rhotacized rime <i>ianr</i>	110
7.4.1	Results	111
7.4.2	Summary.....	116
7.5	Discussion and conclusion.....	117
Chapter 8	Conclusions	119

List of Tables

Table 2.1 Examples of er as monosyllabic words and their lexical meanings...	15
Table 2.2 Examples of <i>r</i> -suffixed words.....	16
Table 3.1 Actual number of participants.....	31
Table 4.1 Responses to the question, ‘What are the advantages of speaking Beijing Mandarin?’ (12 responses from 10 migrant respondents).....	58
Table 5.1 Number of rhotacization tokens ($N=3,402$) per 1,000 words for various speaker groups ($N=76$).....	66
Table 5.2 Summary of the independent <i>t</i> -test on rhotacization frequency of female and male Beijing native speakers.	69
Table 5.3 Summary of the independent <i>t</i> -test on the number of rhotacizations produced by Young, Middle, and Old Beijing native speakers ($N=31$).	70
Table 5.4 <i>p</i> -values of pairwise comparisons of three age groups of female Beijing native speakers ($N=15$).	71
Table 5.5 <i>p</i> -values of pairwise comparisons of three age groups of male Beijing native speakers ($N=16$).	71
Table 5.6 <i>p</i> -values of pairwise comparisons of Beijing native speakers ($N=31$) and Rhotic speakers ($N=22$) of three generations.	72
Table 6.1 Examples of different rhotacized words.....	77
Table 6.2 Number of rhotacization types ($N=1,452$) per 1,000 words for various speaker groups ($N=76$).....	79
Table 6.3 Summary of the independent <i>t</i> -test on the number of the rhotacization types of female and male Beijing native speakers.....	82
Table 6.4 <i>p</i> -values of pairwise comparisons of two genders of Beijing native speakers.	82
Table 6.5 Summary of the independent <i>t</i> -test on the number of rhotacization types produced by Young, Middle, and Old Beijing native speakers ($N=31$).....	83
Table 6.6 <i>p</i> -values of pairwise comparisons of three age groups of female Beijing native speakers ($N=15$).....	84
Table 6.7 <i>p</i> -values of pairwise comparisons of three age groups of male Beijing native speakers ($N=16$).....	84
Table 6.8 Summary of the Mann-Whitney <i>U</i> tests on the number of the rhotacization types produced by speakers in three dialect groups. ...	86
Table 6.9 <i>p</i> -values of non-pairwise comparisons of Beijing native speakers ($N=31$) and Rhotic speakers ($N=22$) of three generations.....	86
Table 7.1 The five most frequently rhotacized rimes used in natural speech of the three dialect groups.	93
Table 7.2 The total number of <i>ianr</i> and the average number per speaker from different dialect backgrounds ($N = 895$).	94

Table 7.3 The number and percentage of the rhotacized rime <i>ianrs</i> by their syllable types, morphemic meanings, and tone realizations (<i>N</i> =895).	95
Table 7.4 The number of <i>ianrs</i> obtained in the corpus (<i>N</i> =895), the actual number of <i>ianrs</i> in the formant analysis (<i>N</i> =460), and the actual average number of <i>ianrs</i> per speaker per social group.	99
Table 7.5 Phonetic variants of the rhotic rime <i>ianr</i> in three segmental-tonal types produced by Beijing, Rhotic, and Non-rhotic speakers.....	109
Table 7.6 Duration (in ms) of the rhotacized rime <i>ianr</i> of three different types produced by Beijing native speakers (<i>n</i> =613). Number of speakers: 31.	111
Table 7.7 Summary of a linear mixed-effects regression predicting <i>ianr</i> duration in different types in the Beijing subcorpus. The intercept corresponds to an OT <i>ianr</i> for a young female speaker. Number of observations = 613.....	112
Table 7.8 Duration (in ms) of the rhotacized rime <i>ianr</i> in three different types produced by Rhotic speakers (<i>n</i> = 260). Number of speakers: 21....	112
Table 7.9 Summary of a linear mixed-effects regression predicting <i>ianr</i> duration in different types in the Rhotic subcorpus. The intercept corresponds to an OT <i>ianr</i> for a young female speaker. Number of observations = 260.....	113
Table 7.10 Duration (in ms) of the rhotacized rime <i>ianr</i> in three different types produced by speakers with Non-rhotic dialect background (<i>n</i> =22). Number of speakers: 16.	114
Table 7.11 Summary of a linear mixed-effects regression predicting <i>ianr</i> duration in different types in the Non-rhotic subcorpus. The intercept corresponds to an OT <i>ianr</i> for a young female speaker. Number of observations = 260.....	114
Table 7.12 Duration (in ms) of the rhotacized rime <i>ianr</i> in three different types by all speakers from three dialect backgrounds (<i>n</i> = 895). Number of speakers: 68.....	115
Table 7.13 Summary of a linear mixed-effects regression predicting <i>ianr</i> . The intercept corresponds to an OT <i>ianr</i> for a young female Beijing native speaker. Number of observations = 895.....	116

Figure 7.7	F2–F1 formant charts of <i>ianrs</i> produced by Non-rhotic speakers using the Lobanov method (scaled).....	105

Acknowledgements

I have been extremely fortunate to have had the support of my supervisors, colleagues, friends, and family near and far. Without their support, this dissertation would not have been possible.

First and foremost, I owe enormous thanks to my supervisors, Dick Smakman, Rint Sybesma, and Niels Schiller. I thank Dick Smakman for giving me the opportunity to do my PhD in Leiden, for enlightening the entrance of sociolinguistics for me, and for giving invaluable comments and feedback on my project. I would also like to express my sincere gratitude to Rint Sybesma. I cannot thank him enough for always being there when I needed his help, for reviewing my progress constantly, and for all the guidance, support, and trust. I am also grateful to Niels Schiller for his helpful comments, suggestions, and constructive criticism throughout the entire project.

I owe special thanks to all the participants of my fieldwork for participating in my data collection. Interestingly, finding a hundred participants in a city with more than 20 million residents turned out far from easy. I obtained help from too many people. Particularly, I would like to thank Qing Yang, Zhiwei Yuan, Xiao Lai, and Yu Feng. Zhiwei, without whose kind help, I have no idea how long it would have taken to find the speakers. Qing, special thanks to you for helping me edit recruitment posters and for traveling with me through the whole city to collect data. I also appreciate the time you generously took to instruct me in data analysis and statistics in Leiden.

I would also like to extend my appreciation to Yiya Chen, Janet Grijzenhout, Albert Backus, and Linda Baden for serving as members of my reading committee and for providing me with valuable advice and feedback.

This paragraph is for my paranymphs – Aliza Glasbergen-Plas and Zhiwei Zhai. Aliza, thank you for your company over these years. Zhiwei, I thank you and your wife Ningning for all your encouragement and support.

I am also very thankful to my MA supervisors in China, Cao Wen and Jinsong Zhang, and my teachers in the Netherlands, Bert Botma, Jeroen Wiedenhof, Koen Sebregts, Leticia Pablos Robles, Lisa Cheng, Marc van Oostendorp, Stella Gryllia and Willemijn Heeren. I thank them for teaching me phonetics, phonology, syntax, and statistics and for showing me how to be a researcher like them.

I would also like to extend my thanks to the colleagues and friends I met in Leiden. I am very grateful to Min, Qian, and Ting: thank you for helping me settle down when I arrived in Leiden, for discussing my research with me and for offering invaluable advice that benefitted me throughout my PhD trajectory; to Yao and Zhongwu, for the time we spent together sharing happiness and sorrows during our PhD projects; to Jingwei Zhang, for your helpful remarks on data collection before my fieldwork; to Yang Yang, Yifei, Hang, Menghui and Cesko, for always giving me a hand when I needed help and for your insightful discussion with me; to Jiang and Zhuoyi, for sharing various literature and materials with

me and also for teaching me to enjoy life. Some of the other colleagues inside and outside of LUCL I would like to thank are Ami Okabe, Bushra Alkhamees, Chen Ran, Dan Yuan, Evelyn Bosma, Feng Xu, Hanna Fricke, Jin Wang, Jinlei Zhou, Jos Pacilly, Junru Wu, Katja Lubina, Lena Karvovskaya, Man Wang, Qiong Peng, Shaoyu Wang, Shuju Shi, Tingting Zheng, Xiaoli Feng, Xiaoqing Xu, Xingyi Wen, Yanhong Zhu, Yiran Ding, Zexu Guan, Zhaole Wang, Zhen Li, and Zohreh Shiamizadeh. Thanks for the memories that we have shared over the past years and for providing an outlet for my research.

Many thanks to Edit, Hester, Jikkie, and Marlene, for your consistent concerns about my PhD project progress and my personal development, and for always giving me encouragement.

Completing this dissertation would definitely have been impossible without my boyfriend, Merijn. Your love, understanding, and encouragement got me through the rough patch, and then incredible changes just happened one after another. I have never felt so happy, calm, and certain before. I'm also very grateful to Jacqueline, Willem, and Eveline, thank you for taking care of me as family. My life is filled fully with love because of all of you.

Last but not least, no words can express my gratitude to my family: my mum, dad, and older sister. We are 10000+km away from each other, and we couldn't see each other that often, especially due to Covid-19, but you are always my backbone, my motivation and my compass. Thank you for all your unconditional support, love, and endless belief in me.

This dissertation was funded by a PhD scholarship from the Chinese Scholarship Council. I would also like to acknowledge the partial financial support from the Leiden University Centre for Linguistics.
