Galactic substructures as tracers of dark matter and stellar evolution

Galactic substructures as tracers of dark matter and stellar evolution

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof. dr. ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op dinsdag 27 september 2022
klokke 13:45 uur

door

Stella Reino

geboren te Tallinn
in 1991

Promotor:	Prof. dr. K. H. Kuijken
Co-promotores:	Dr. E. M. Rossi
	Dr. R. E. Sanderson (University of Pennsylvania)

Promotiecommissie:	Prof. dr. H. J. A. Röttgering
	Prof. dr. H. Hoekstra
	Dr. A. G. A. Brown
	Prof. dr. D. W. Hogg (New York University)
	Prof. dr. K. V. Johnston (Columbia University)
	Prof. dr. D. Zaritsky (University of Arizona)

ISBN 978-94-6469-015-6
Cover design by Janno Jõulu
Printed by ProefschriftMaken

"Behind all seen things lies something vaster;
everything is but a path, a portal or a window
opening on something other than itself."

– Wind, Sand and Stars by Antoine de Saint-Exupéry

Contents

1 Introduction **1**

1.1 The structure of the Galaxy . . . 3

1.1.1 Open clusters . . . 6

1.1.2 Stellar streams and halo substructure . . . 7

1.2 Galactic potential . . . 11

1.2.1 Extracting the Galactic potential with stellar streams 14

1.2.2 The action-clustering method . . . 16

1.3 Thesis outline . . . 19

2 Galactic potential constraints from streams **23**

2.1 Introduction . . . 24

2.2 Method . . . 26

2.2.1 Stäckel potential . . . 27

2.2.2 Actions . . . 30

2.2.3 Determination of the best-fit potential . . . 31

2.2.4 Determination of confidence intervals . . . 34

2.3 Stream catalogue . . . 36

2.3.1 The GD-1 stream . . . 38

2.3.2 Orphan Stream . . . 39

2.3.3 The Palomar 5 stream . . . 40

2.3.4 The Helmi stream . . . 41

2.4 Results for a single-component potential . . . 42

2.4.1 Results for the individual stream data sets . . . 42

2.4.2 Results for the combined data set . . . 44

2.5 Results for a two-component potential . . . 47

2.5.1 Results for individual stream data sets . . . 47

2.5.2 Results for the combined data set . . . 51

2.6 Validation . . . 52

2.6.1 Tests of fitting assumptions . . . 53
2.6.2 Predicted orbits . . . 55
2.6.3 Action space and stream orbital phase . . . 55
2.7 Comparison and discussion . . . 60
2.7.1 Enclosed mass estimates . . . 60
2.7.2 The Galactic rotation curve . . . 62
2.8 Conclusions . . . 65
2.A Data collection . . . 66
2.A.1 GD-1 data . . . 66
2.A.2 Orphan Stream data . . . 68
2.A.3 Palomar 5 stream data . . . 70
2.B KLD1 example . . . 72

3 Systematics in constraints from stellar streams 77
3.1 Introduction . . . 78
3.2 Method . . . 80
3.2.1 Stäckel potential . . . 80
3.2.2 Actions . . . 83
3.2.3 Clustering measurement . . . 83
3.3 Simulation data . . . 86
3.4 Full stream results . . . 91
3.5 Sections of streams . . . 98
3.6 Orbital phase . . . 99
3.7 Bias dependence on other stream properties . . . 102
3.8 Conclusions and Discussion . . . 106
3.A Stream velocities . . . 110
3.B Bias as a function of further stream properties . . . 110

4 Galactic potential constraints from H3 113
4.1 Introduction . . . 114
4.2 Method . . . 116
4.2.1 Measuring action-space clustering . . . 116
4.2.2 Trial potentials . . . 118
4.3 Data . . . 120
4.4 Results . . . 123
4.5 Simulations . . . 126
4.5.1 Interlopers . . . 127
4.5.2 Measurement errors . . . 128
4.5.3 Leave-one-out cross-validation . . . 129
4.6 Leave-one-out cross-validation in the H3 sample . . . 130

4.7 Conclusions and Discussion 135

5 *Gaia* study of the Hyades 141
5.1 Introduction 142
5.2 Data 143
5.2.1 Astrometry 143
5.2.2 Radial velocities 144
5.3 Membership selection 144
5.3.1 Centre of the cluster 144
5.3.2 Velocity of the cluster 145
5.3.3 Probability of membership 146
5.3.4 Final distance and velocity 148
5.3.5 Systematic astrometric errors 148
5.4 Validation and discussion of membership results 149
5.4.1 Comparison with earlier studies 149
5.4.2 Stellar density of the galactic field 151
5.4.3 Colour-absolute magnitude diagram 153
5.4.4 Spatial distribution of members 156
5.4.5 Velocity distribution of members 159
5.5 Kinematic modelling 162
5.5.1 Overview 162
5.5.2 Initial conditions 163
5.5.3 Stopping criterion 164
5.6 Results 165
5.6.1 Velocity distribution 166
5.6.2 Velocity dispersion 167
5.6.3 Parallax comparison 168
5.6.4 Systematic errors and correlations 168
5.6.5 Astrometric radial velocities 171
5.6.6 Colour-absolute magnitude diagram 172
5.7 Discussion and conclusions 176
5.A Radial velocity data 177
5.A.1 Perryman et al. (1998) 177
5.A.2 Griffin (2012) 177
5.A.3 Griffin (2013) 178
5.A.4 Mermilliod et al. (2009) 178
5.A.5 White et al. (2007) 178
5.A.6 Tabernero et al. (2012) 178
5.A.7 Debernardi et al. (2000) 178
5.A.8 HADES 178

5.A.9 XHIP 179
5.A.10 RAVE 179
5.A.11 APOGEE 179
5.A.12 GALAH 179
5.A.13 Epoch radial velocities 179
5.A.14 Creating a final, merged table 180
5.B Johnson photometry 181
5.C Double stars 181
5.D Isochrones 182
5.E Expansion and rotation 183
5.F Extension of Lindegren et al. (2000) 184
