Acknowledgements

I would like to thank Prof. Michael Richards, Prof. Jean-Jacques Hublin, and the Max Planck Society for giving me the opportunity to pursue a long-held dream. For a variety of reasons, completing this dissertation was much harder than it could or should have been, and it is only because of the patience, understanding, and support of Dr. Shannon McPherron and Prof. Jean-Jacques Hublin that I was able to bring this thesis to fruition. This work would also have been impossible without the support of my wife, Cecilia Pop, and my parents, Nicolae and Veronka Pop, who always stood by me. Thank you!

My sincerest thanks also to Silke Streiber, Cornelia Schicke, Lysann Klausnitzer and other staff at the Department of Human Evolution at MPI-EVA for all their help. To Will Archer, Marcel Weiß, Tamara Dogandžić, Geraldine Fahy, Colin Moore, Nadia Scott, and other PhD students from the department, thank you for all the insightful conversations and amazing experiences. You made the three and a half years I lived in Leipzig a special time of my life. Though my PhD hat may not decorate the shelves of the second floor, it is there with yours, I hope, in spirit. A special thank you to Domingo Salazar-Garcia, Marcello Mannino, and Klervia Jaouen who also helped make the early years of my PhD a treat that I will never forget. To Helen Fewlass and Alexandra Schuh, thank you for making the six weeks I spent in Leipzig in 2017 an absolute delight. Finally, a thank you also to Veronica Silva, for bringing me Chocman all the way from Chile, for the amazing ceviche, and for being a friend.

I would like to express my enormous gratitude to Prof. Lucy Wilson for her willingness to share her data with me, for the always prompt responses to any questions I had, and for being overall instrumental in enabling me to finish this dissertation. I am also very grateful to everyone who I collaborated with to various extent over the years, including but not limited to Kat Fitzsimmons, Sam Lin, and Darya Presnyakova. I learned a lot from you.

I would also like to acknowledge the role Harold Dibble and Dennis Sandgathe played in inspiring me to pursue graduate studies in archaeology. I doubt I would have started down the path that led to this thesis if Dennis hadn't invited me to participate in the excavations at Roc de Marsal, or if Harold hadn't sat me down one evening in Carsac to have a chat about my academic future. I regret that I did not have a chance to learn more from Harold before his untimely passing. I would also like to acknowledge the role Carol MacLeod had in my early academic development. She asked the question that sparked my interest in Neanderthals (did they have a symbolic capacity?) and allowed a young, first year, overenthusiastic undergraduate student to hand in his five-page essay, containing some 40 references, over a month late. Finally, I would like to acknowledge the role played by David Pokotylo, who made statistics accessible and, dare I say, fun. Not a small feat for a student who, despite his passion for computing, never liked math.

It has been an amazing journey.

Curriculum Vitae

Cornel Pop was born in Baia Mare, Romania, on the 7th of February 1981. He finished high school in 1999 at the Liceo Católico Atacama in Copiapó, Chile, and began his bachelor's degree at the University of British Columbia (UBC) in 2000. Between 2001 and 2010 Cornel also worked full time as a UNIX systems analyst at UBC, in what was then the Department of Earth and Ocean Sciences. His roles there included supervising a computing cluster and co-supervising the department's core servers, as well as developing or implementing an array of new technologies. After graduating from UBC with a BA in Anthropology in 2010, Cornel began a Master of Arts (MA) program, also at UBC, under the supervision of Prof. Michael Richards. His master's research focused on the Middle Palaeolithic period of present-day Romania, and he earned a Faculty of Arts Graduate Award and a SSHRC CGS Master's Scholarship grant. Cornel graduated from his MA program in 2013. In 2012 he started his doctoral research in the Department of Human Evolution at the Max Planck Institute for Evolutionary Anthropology in Leipzig, Germany, initially under the supervision of Prof. Michael Richards and then under the supervision of Dr. Shannon McPherron. Since 2016, Cornel has also been teaching anthropology at Columbia College in Vancouver, BC. After completing his doctoral research, partially published in international peer-reviewed journals and presented at international conferences, he submitted his dissertation to the University of Leiden in 2021.
