List of Publications

1. Comprehensive overview of autoantibody isotype and subclass distribution. Accepted for publication. *J Allergy Clin Immun.* Volkov M., [Coppola M](#), et al.
2. The *In Vivo* Transcriptomic Blueprint of *Mycobacterium tuberculosis* in the Lung. 2020 Feb. *Front Immunol.* [Coppola M](#) and Ottenhoff THM.
3. *In vivo* expressed *Mycobacterium tuberculosis* antigens recognised in three mouse strains after infection and BCG vaccination. 2021 Jun. *NPJ Vaccines.* [Coppola M](#), et al.
4. Cell-Mediated Immune Responses to *in vivo*-Expressed and Stage-Specific *Mycobacterium tuberculosis* Antigens in Latent and Active Tuberculosis Across Different Age Groups. 2020 Feb. *Front Immunol.* [Coppola M](#), et al.
5. Genome wide approaches discover novel *Mycobacterium tuberculosis* antigens as correlates of infection, disease, immunity and targets for vaccination. 2018 Oct. *Semin Immun.* [Coppola M](#) and Ottenhoff THM.
6. Vaccines for Leprosy and Tuberculosis: Opportunities for Shared Research, Development and Application. 2018 26. *Front Immunol.* [Coppola M](#), et al.
7. Differences in IgG responses against infection phase related *Mycobacterium tuberculosis* (*Mtb*) specific antigens in individuals exposed or not to *Mtb* correlate with control of TB infection and progression. 2017 Sep. *Tuberculosis (Edinb).* [Coppola M](#), et al.
8. New Genome-Wide Algorithm Identifies Novel *In Vivo* Expressed *Mycobacterium Tuberculosis* Antigens Inducing Human T-Cell Responses with Classical and Unconventional Cytokine Profiles. *Sci Rep.* 2016 Nov. [Coppola M](#), et al.
9. Synthetic Long Peptide Derived from *Mycobacterium tuberculosis* Latency Antigen Rv1733c Protects against Tuberculosis. *Clin Vaccine Immunol.* 2015 Sep. [Coppola M](#), et al.
10. Clonal analysis of the T-cell response to *in vivo* expressed *Mycobacterium tuberculosis* protein Rv2034, using a CD154 expression based T-cell cloning method. *PLoS One.* 2014 Jun 6. Commandeur S, [Coppola M](#), et al.
11. Multi-functional flow cytometry analysis of CD4+ T cells as an immune biomarker for latent tuberculosis status in patients treated with tumour necrosis factor (TNF) antagonists. *Clin Exp Immunol.* 2014 Jun. Sauzullo I, Scrivo R, Mengoni F, Ermocida A, [Coppola M](#), Valesini G, Vullo V, Mastroianni CM.
12. Use of a contact center telephone helpline in rheumatology outpatient management: a five-year experience analysis and patients' perception. *Mod Rheumatol.* 2014 Jul Scrivo R, Priori R, [Coppola M](#), Minniti A, Brandt J, Picarelli G, Cruciani V, Luzi P, Valesini G.

13. Mycobacterial Interferon- γ Release Variations During Longterm Treatment with Tumor Necrosis Factor Blockers: Lack of Correlation with Clinical Outcome. *J Rheumatol* 2012 Dec 1. Scivo R, Sauzullo I, Mengoni F, Priori R, Coppola M, Iaiani G, Di Franco M, Vullo V, Mastroianni CM, Valesini G.

About the Author

Mariateresa Coppola was born in 1988. After receiving her high school diploma in 2006, she was admitted to the Medical Faculty of Rome, La Sapienza. On top of the mandatory classes, she signed up for several elective clinical internships in different specialties, including internal medicine, oncology, and immunology. In her exchange year in Barcelona, she worked in different labs in the fields of cognitive neuroscience, liver surgery, and infectious disease. She wrote a thesis on latent tuberculosis infection in rheumatoid arthritis patients treated with immunosuppressive drugs. After receiving her medical degree cum laude, she started her doctoral research with Prof. Tom Ottenhoff and Prof. Annemieke Geluk (Department of Infectious Disease, Leiden). Her scientific world expanded: new lab skills, research questions, challenges, interactions with inspiring scientists, and three scholarships to present her work in Santa Fe (LUF grant), Boston (Vaccine Renaissance Scholarship for Women), and São Paulo (Advanced School on Vaccines). This thesis describes the results of her PhD experience.

In 2019, she joined the group of Prof. Reina Mebius (MCBI, Amsterdam), where she has been focusing her research on characterizing B and follicular T helper cell responses across auto-immune disorders, inborn errors of immunity, and cancer. Besides her research project, she helped setting-up a national symposium (within the TargetToB consortium), high dimensional analysis meetings (MCBI), and a scientific retreat (CCA, Amsterdam), among others. Since she believed that climate change is among the most urgent problems humanity faces, she joined the Core Team of the MCBI green team to promote green actions in labs. Recently, well-fitting her scientific passions, she started a collaboration with Prof. Maria Yazdanbakhsh, aiming to unravel the basis underlying vaccine immune hypo-responsiveness and find ways to reverse it.

Acknowledgments

Tom and Annemieke, thanks for letting me start this PhD project, which became an extraordinary life-changing experience. You were both crucial in different stages of my scientific development: Annemieke at the beginning, Tom at the end. You guided my growth as a scientist giving me space not only in the lab but also in setting up numerous collaborations and actively participating in international consortia, which allowed me to expand my network, knowledge, and confidence. For all this, and for enriching my prospect with your different viewpoints, I am grateful.

Krista, your teaching and help went far beyond the lab bench. You showed me the beauty of analysing data and seeking unexplored alternatives. You encouraged me to strengthen my voice and own my project. You were always available to discuss science and life, whether it was late in our empty office, a Spanish metro, or the Swiss Alps. You taught me positive thinking and coherence with mind and heart, lessons that I try to keep in mind daily. Thanks for this and for supporting me once again during my defence.

Susan, thanks for being so attentive towards me. I could always count on you, your integrity, and friendship. I admire your dedication to work and people and your attention to detail. Thanks to your neat *in vivo* experiments, we could test many antigens for this project. I enjoyed being your desk neighbour, exchanging recipes and smiles.

Emile, thanks for lifting the spirits whenever needed, welcoming my last-minute dinner ideas, sharing the ups and downs of life, and letting me discover your deeper self. Thanks for your loyalty and friendship, which I highly value and enjoy.

Kim, thanks for all the fun we had.

Anouk, Cass, and Maria, I was privileged to witness the start and end of your PhD tracts. Thanks for sharing parts of your scientific and life paths.

Louis, Suus, Calinda, Edwin, Kees F., Leonar, Kees K, Corine, Mardie, Ilse, Roel, Anna, Jonathan, Natasha, Josimar, Corina, Arthur, Mikolaj, Laura, Paula, Eleonora, Gül, Bep, Alwin, Annelies, Els, Adriette, Michella, Miriam, Liesbeth, and Ingrid. Thanks for contributing in different ways to make my PhD journey richer and unique. I will carefully store all memories I have with you.

Simone, Marielle, Peter, Leo, Sandra, and all junior and senior scientists I met through Vactrain, TBVAC, and FAPESP, a big thanks! I learned a lot from your critical thinking.

Thanks to José, Ole, and their colleagues for hosting me in their labs. Marta, thanks for collaborating with me. It was a great experience. Raquel, thanks for sharing hours of experimenting, taking pictures, visiting musea, and connecting.

Thanks to Teresa, Anne and my Greek friend Maria for crossing my life and bringing a sense of peace. You are clever, loving and kind persons, who give to others without reserve. The world has a lot to learn from you, me first.

Ana, Eli, Aju, Flora, and Paulina. Thanks for being such marvellous beings. Spending time with you, either organizing a film festival, a journey, enjoying art, music, philosophizing over essential themes, or the irregular shape of ginger, made those years light, deep and special.

For being always there for me, a deep thank to Mary F., Tommy, Matteo, Antonello, and to all my friends scattered around the world, my 'Bruggestraat neighbours', my old housemates, alla mia grande famiglia Trivignese and my Dutch family.

Reina, thanks for your support. Your bright scientific mind, passion and compassion kept motivating and inspiring me to reach the end of this path and start new ones. Ola, Tanja, Estefany, Eline, Mike, Andrew, Janna, Eelco, Daphne, Lotte and Catarina, thanks to the time we spend together science keeps being fun!

Frank, you have been among the main characters of this adventure. Thanks for sharing thoughts, frustrations, successes, laughs, vera amicizia and, with some delay, even your precious cachaça! I have a deep affection for you that extends to Maria and Sam, your wonderful family. Thanks for being my paranymph and for keeping being part of my life.

Grazie Ale per la tua presenza ormai fraterna. Mamma, Papà e Fra, grazie per il vostro amore incondizionato. Il vostro sostegno è la mia risorsa più grande.

"Galeotto fu 'l SPPL3 e chi lo descrisse". Matthias, of all the turns this PhD path has taken, you have been the most unexpected. Thanks for our animated discussions, challenging every side of life and science and making them so interesting. Thanks for fuelling my curiosity, bringing order in my chaos, messing up my certainties, believing in my intuitions and for caring. Your support and trust in me were essential. You are an unpublished chapter of this PhD tract, one that I love writing every day.

Infine, un grande grazie va a te Iris, che ogni giorno mi ricordi la bellezza e la vera essenza della vita.
