Computational Modeling of Cellular Dynamics in Tumor Cell Migration

Gerhard A. Burger

Cover: Simulation of HCC38 triple-negative breast cancer cells using a pseudopod-driven cellular Potts model. See Chapter 5 for details.

Computational Modeling of Cellular Dynamics in Tumor Cell Migration

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 30 november 2022
klokke 10.00 uur

door

Gerhard A. Burger

Promotores:

Dr. J.B. Beltman

Prof.dr. B. van de Water

Promotiecommissie:

Prof.dr. H. Irth

Prof.dr. J.A. Bouwstra

Prof.dr. E.H. Danen

Prof.dr. R.M.H. Merks

Prof.dr. K.H.W.J ten Tusscher (Universiteit Utrecht)

Prof.dr. C. Storm (Technische Universiteit Eindhoven)

Het onderzoek beschreven in dit proefschrift is uitgevoerd binnen de divisie Drug Discovery and Safety van het Leiden Academic Centre for Drug Research (LACDR), Universiteit Leiden, en is (mede) gefinancierd door de Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO).

[...]In the face of all this, the question is whether you have been frightened off working on pathological EMTs, or even if you are not interested anymore and would prefer waiting till the field reaches a steady state of robust knowledge. Do not be afraid and be interested now. It only involves being more plastic, like the EMT itself.

Angela Nieto (2021)

Contents

1	Introduction, aim and scope of the thesis	1
1.1	Introduction	2
1.2	Thesis outline	7
2	Deciphering Epithelial-Mesenchymal Plasticity through Computational Approaches	9
2.1	Introduction	10
2.2	Unraveling the EMT regulatory network	11
2.3	EMT in relation to other tumor characteristics	21
2.4	Perspective	27
3	Bidirectional crosstalk between epithelial-mesenchymal plasticity and IFNγ-induced PD-L1 expression promotes tumor progression	29
3.1	Introduction	30
3.2	Results	32
3.3	Discussion	38
3.4	Materials and Methods	43
	Supplementary Material	47
4	A gene regulatory network of SNAIL1 and PRRX1 controls EMP in MDCK (NBL-2) cells	55
4.1	Introduction	56
4.2	Results	58
4.3	Discussion	63
4.4	Materials and Methods	66
	Supplementary Material	69
5	Cell density and pseudopod dynamics alter the migratory characteristics of the HCC38 triple-negative breast cancer cell line	73
5.1	Introduction	74
5.2	Results	76
5.3	Discussion	87
5.4	Materials and Methods	89

Supplementary Material	99
6 Discussion	111
6.1 Summarizing discussion	112
6.2 Perspectives	116
6.3 Conclusion	121
A Appendix	123
References	124
Abbreviations	140
Summary	141
Nederlandse samenvatting	144
