Size Effects in Microstructured Superconductors and Quantum Materials

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op woensdag 7 december 2022
klokke 16:15 uur

door

Remko Fermin
Geboren te Rotterdam
in 1993

Promotor:

Prof. dr. J. Aarts

Promotiecommissie:

Prof. dr.ir. J.W.M. Hilgenkamp Universiteit Twente
Dr. A. McCollam Universiteit Nijmegen
Dr. M. P. Allan
Prof. dr. ir. T. H. Oosterkamp
Prof. dr. K.E. Schalm

Casimir PhD series, 2022-27

ISBN 978-90-8593-538-4

An electronic version of this thesis can be found at:

De beloning van de deugd is de deugd zelf

-Baruch Spinoza

CONTENTS

1	Introduction	1
1.1	Outline of this thesis	3
1.1.1	Part one: Josephson physics in thin film planar junctions	3
1.1.2	Part two: Mesoscopic SF-hybrid Josephson junctions	4
1.1.3	Part three: Strongly correlated ruthenium oxide microstructures	5
	References	6
	Part one: Josephson physics in thin film planar junctions	11
2	Superconductivity and Josephson physics	13
2.1	A macroscopic quantum phenomenon	14
2.2	The Meissner effect and its consequences	15
2.3	Pairing symmetry	17
2.4	The proximity effect and Josephson junctions	20
2.5	Shapiro steps	23
2.6	Magnetic interference in a Josephson Junction	25
2.7	Extracting the supercurrent density with Fourier analysis	27
	Appendices	28
	A Experimental set-up and measurement procedure.	28
	References	29
3	Reducing dimensions: the thin film planar Josephson junction	33
3.1	Introduction	34
3.2	Review of the Clem model	34
3.3	Comparing different geometries	37
	3.3.1 Simulation results	38
	3.3.2 Comparison to experiments	42
3.4	Consequences for the Fourier analysis	44
	3.4.1 Technical details of the Fourier analysis	45
3.5	Conclusion	47
	References	48

Part two: Mesoscopic S–F-hybrid Josephson junctions	51
4 Superconducting triplet rim currents in a spin-textured ferromagnetic disk	53
4.1 Introduction	54
4.2 Establishing long-range triplet transport	55
4.3 Triplet currents confined to the rims of the disk.	57
4.4 Altering the magnetic texture by an in-plane field.	58
4.5 Modeling LRT generation at the rims of the disk	60
4.5.1 Mapping spin texture to spin-orbit coupling	61
4.5.2 Mechanism for generating LRT rim currents	62
4.6 Discussion	63
4.7 Conclusion	64
Appendices	65
A Control experiments	65
References	67
5 Mesoscopic superconducting memory elements based on bistable magnetic textures	73
5.1 Introduction	74
5.2 Ellipse-shaped S–F–S junctions	76
5.3 Controllable switching	77
5.4 Stray field driven mechanism	80
5.5 Pairing symmetry of the supercurrents	81
5.6 Conclusion and outlook.	82
Appendices	83
A Micromagnetic simulations	83
B Additional data	84
References	87
Part three: Strongly correlated ruthenium oxide microstructures	91
6 Universal size-dependent nonlinear charge transport in single crystals of the Mott insulator Ca_2RuO_4	93
6.1 Introduction	94
6.2 Characterizing microscopic samples	96
6.3 Comparing samples of different cross section.	96

6.4	The role of temperature	100
6.4.1	Micro-scale thermometry	101
6.4.2	Comsol simulations	102
6.4.3	Consequences of heating	103
6.5	Discussion	104
6.6	Conclusion	106
	Appendices	107
A	Crystal growth and sample fabrication	107
B	Abrupt transition in a relatively thick microscopic sample	108
C	The Figure of Merit as a function of other length scales	109
D	Reconstructing the JE -characteristic on basis of Joule heating only	110
E	Minimal model for current density inhomogeneity over the cross-sectional area	112
	References	114
7	Controlling chiral domain walls in mesoscopic Sr_2RuO_4 using geometry and in-plane magnetic fields	119
7.1	Introduction	120
7.2	Brief experimental history of the pairing symmetry in Sr_2RuO_4	121
7.2.1	An unconventional superconductor	121
7.2.2	post-2019 results: a shift from the p -wave paradigm	122
7.3	Trapping a single superconducting domain wall in mesoscopic Sr_2RuO_4	124
7.4	Detection of Shapiro steps	127
7.5	Considerations on geometry	128
7.6	$I_c(T)$ of a chiral domain wall junction	130
7.7	Field-induced bistable domain configurations	131
7.8	Altering the periodicity of current-phase relation with in-plane magnetic fields	135
7.9	Implications for the pairing symmetry	138
7.10	Conclusion and outlook	139
	Appendices	139
A	Sample dimensions of ring samples	139
B	Stability of chiral domain walls under in-plane fields	140
C	proposed experiment to establish a- and b-axis in situ	142
	References	143
