1 Introduction	1
1.1 Old and new insights	1
1.2 Structure of the dissertation	3
1.3 The Danish language	5
1.4 Transcription conventions	7
I The big picture	13
2 Previous research on Danish stops	15
2.1 Preliminaries	15
2.2 History	16
2.2.1 Historical sources of stops and semivowels . . .	16
2.2.2 Recent changes in stops and semivowels	20
2.2.3 Summary	21
2.3 Phonetics	22
2.3.1 Aspiration and voice onset time	22
2.3.2 Closure voicing	28
2.3.3 Actions of the larynx	29
2.3.4 Burst and affrication	31
2.3.5 Articulatory force	33
2.3.6 Fundamental frequency	35

2.3.7	Summary	36
2.4	Phonology	37
2.4.1	Consonant inventory and positional allophones	37
2.4.2	Combinatorial possibilities	41
2.4.2.1	Surface clusters	41
2.4.2.2	Underlying clusters	44
2.4.3	Underlying representation	48
2.4.3.1	Representation of laryngeal contrast	48
2.4.3.2	Representation of place contrasts . .	56
2.4.4	Gradation patterns	56
2.4.5	Summary	63
2.5	Variation	64
2.5.1	Phonetic reduction	64
2.5.2	Social variation	65
2.5.3	Regional variation	66
2.5.4	Summary	73
3	The synchrony and diachrony of stop gradation	75
3.1	Introduction	75
3.2	The alternations	78
3.3	Problems with the traditional analysis	82
3.3.1	Intractable neutralizations	82
3.3.2	Lack of similarities between allophones	86
3.3.3	Insufficient morphophonological evidence . . .	90
3.4	An alternative analysis	94
3.4.1	No neutralizations	97
3.4.2	Shared phonetic and phonological properties .	97
3.4.3	Alternations stored as suppletive allomorphs .	100
3.4.4	Summary	101
3.5	The diachronic trajectory of stop gradation	101
3.5.1	Evolutionary Phonology and the CCC-model .	102
3.5.2	Stop gradation in five diachronic steps	106
3.5.2.1	Singleton voicing in weak position .	108
3.5.2.2	Loss of closure in weak position . . .	109
3.5.2.3	Loss of voicing in strong position . .	112
3.5.2.4	Increased aperture in weak position .	113
3.5.2.5	Recategorization of weak allophones	114

3.5.3	The history of closure voicing	118
3.6	Conclusion	121

	Curriculum vitae	333

Acknowledgments

This dissertation is the product of the labor and love of many people who helped me along the way. First off, I would like to thank my wonderful supervisors, Janet Grijzenhout and Bert Botma, for their support and guidance throughout the process. I would also like to thank my collaborators on research that went into the dissertation: Camilla Søballe Horslund, Henrik Jørgensen, and Yonatan Goldshtein. Thank you for always being available for questions, discussions, and useful comments, both in connection with papers that we have worked on and in general. I genuinely hope that our collaborations have only just begun. Yonatan has been a fantastic friend since I first discovered linguistics ten years ago, and has been more influential on my way of thinking than I could ever put into words.

Many people read early versions of one or more of the chapters, and gave helpful comments: Camilla, Yonatan, Stig Eliasson, Míša Hejtná, Sam Kirkham, Jan Heegård Petersen, Nicolai Pharo, and Ruben Schachtenhaufen. Dirk Jan Vet contributed an enormously useful Praat script, and Paul Boersma, Laura Smorenburg, and Cesko Voeten all gave helpful tips about aspects of the statistical modeling and acoustic processing; Andreea Geambasu gave helpful advice on the presentation of the online appendices. Thanks to Søren Sandager Sørensen for always being available to discuss *any* aspect of the Danish language.

The contents of this dissertation have been greatly improved by the peer review system. I would like to thank all peer reviewers who read associated papers, including the reviewers for a paper submitted

to *Journal of the International Phonetic Association* which never materialized. I would also like to thank the editors for these publications and submissions: Hartmut Haberland, Nanna Haug Hilton, James Kirby, Remco Knooihuizen, Jeff Mielke, Hans Van de Velde, and Elizabeth Zsiga. Thanks also to everyone who showed up to presentations and posters and gave feedback.

Thanks to the wonderful people I have surrounded myself with while working on this dissertation: Astrid van Alem, András Barany, Meike de Boer, Hang Cheng, Lis Kerr, Menghui Shi, Matthew Sung, Xander Vertegaal, Andrew Wigman, Sarah von Grebmer zu Wolfsturn, Jiang Wu, Cesko, Laura, and the rest of my PhD cohort. Thanks to the Tromsø/Verona phonologists: Birgit Alber, Eirini Apostopoulou, Andrea Brugnoli, Joachim Kokkelmans, Martin Krämer, Anna Katharina Pilsbacher, Tor Håvard Solhaug, Olga Urek, Kate Zhakun. Thanks to the Aarhus dialectologists: Torben Arboe Andersen, Nina Grøftehaug, Inger Schoonderbeek Hansen, Kirsten Lyshøj, Ove Rasmussen, Viggo Sørensen. Thanks to my colleagues at UvA, Silke Hamann and Marijn van 't Veer. My understanding of language and linguistics was shaped at the fantastic Linguistics department in Aarhus. Thanks to teachers (Peter Bakker, Anna Jespersen, Bill McGregor, Jan Rijkhoff, Jakob Steensig, Ethan Weed), co-students (in particular to Yonatan, Søren, Katrine Garly, Kasper Fyhn, Mads Lundegaard, Tina Raakjær Mølgaard, Jonathan Puntervold, Nikolas Tranæs), my fellow DanTiN members, and everyone who hung out in Lingoland between 2012–2018. Thanks to Sidsel Rasmussen for pointing me in the direction of this PhD position. Finally but very importantly, thanks to my students from the past eight years. You have immeasurably improved my understanding of the subject matter.

For obvious reasons, writing a PhD in 2020–2022 has not exactly been what I expected when I started in 2018. My office has been my dining room table, the fun aspects of conferences and summer schools were essentially scrapped, and the lion's share of the dissertation has been written on a tablet. So a brief note of thanks to the services that made this bearable: the reading groups of the Tromsø/Verona phonology circle and the Aarhus-based Sounds of Language and Speech group who moved their activities online,

the Linguistics Twittersphere, Gonge and Meilandt who brought Pink Cheese Quiz into our living rooms. A huge, huge thanks to my roomie, office mate, and perhaps my most essential coauthor during this whole debacle – our cat Kipawsky, who moved in during summer 2020. I eventually decided to edit out all his contributions. I am sure he meant well, but I found them completely incomprehensible, as if he simply wandered aimlessly over the keyboard. Here is a sample, which strikes me as pure gibberish: ‘8888888888888888,hlb.,l.’.

En stor tak til min mor og far, til Mikkel, Signe, Lærke og Oscar, og resten af min familie og venner i Danmark for at være en enorm støtte gennem hele projektet og for at være gode til at holde kontakten selv når jeg ikke har været det.

Finally, thanks to my wife, Rikke, who came with me on this journey. I feel weirdly safe moving around the world with you pursuing an elusive academic career, because I can be certain you will end up doing important work no matter where we might find ourselves. Thanks for being the coolest person I know, and thanks for agreeing to spend your life with me. For what it’s worth, this book is for you.
