# TABLE OF CONTENTS

General introduction and outline	8
<b>Part I Conceptualization of disease resolution in rheumatoid arthritis</b>	
<hr/>	
1. DMARD-free remission as novel treatment target in rheumatoid arthritis	20
2. Early DAS-response after DMARD-start increases probability of achieving sustained DMARD-free remission in rheumatoid arthritis	38
3. Unraveling heterogeneity within ACPA-negative rheumatoid arthritis; the subgroup of patients with a strong clinical and serological response to initiation of DMARD-treatment favor disease resolution	56
4. ACPA-negative and ACPA-positive RA-patients achieving disease resolution demonstrate distinct patterns of MRI-detected joint inflammation	74
5. Sustained DMARD-free remission in rheumatoid arthritis: about concepts and moving towards practice	92
<b>Part II The changing clinical concept of undifferentiated arthritis</b>	
<hr/>	
6. Undifferentiated arthritis; a changing population who did not benefit from enhanced DMARD-strategies - results from a 25-years longitudinal inception cohort	114
7. No excess mortality in contemporary undifferentiated arthritis, in contrast to rheumatoid arthritis; a study with a follow-up of at least 10 years	134
Summary, discussion and future perspectives	142
Nederlandse samenvatting	154
Curriculum Vitae	166
Woord van dank	170
List of abbreviations	174
