Appendices

Curriculum vitae

Laura Zwep was born on January 12, 1994, in Utrecht, the Netherlands. Her academic education started with a Bachelor degree in Biology at Leiden University (2012 - 2015). After that she completed a Master degree (cum laude) in Statistical Science for the Life and Behavioural Sciences at Leiden University (2015 - 2017). During her Master program she performed research projects at the Biometris department at Wageningen University and the department of Epidemiology at the Erasmus Medical Center, Rotterdam.

Laura started her PhD at Leiden University in 2017 under the supervision of prof. dr. Jacqueline. Meulman and dr. Coen van Hasselt, working at the Leiden Academic Centre for Drug Research (LACDR). During her PhD she developed her interests in teaching and was involved in numerous student projects and lectured and contributed to several Bachelor and Master. Laura has presented her work at several international conferences, including oral presentation at the International Biometric Conference (2020) and the Population Approach Group Europe Meeting (2022). Since March 2023, Laura has started as assistant professor at the division of Systems Pharmacology and Pharmacy at LACDR and Leiden University, contributing to teaching and research at the interface of statistics and pharmacometrics.

Acknowledgements

This thesis, and the enjoyable time I had as a PhD student, would not have been possible without the many people that were involved over the last five years. First, I would like to thank my promotor Jacqueline, who has always encouraged me, both by positively supporting me and by being very critical towards my scientific work. She is a great example on how to be a scientist with loyalty and (scientific) integrity. Second, I would like to thank Coen, my supervisor, who has provided me with many great research projects, and has many brilliant ideas, both about science and about the way the academic world could be improved. It has been a pleasure being supervised by him. I want to thank Kevin for guiding me through the first half of my PhD, by always taking me serious and sharing and developing ideas for our research.

I have many wonderful colleagues, who made my time as a PhD student really amazing. I was always able to get joy and support from my colleagues. I want to thank my paranymphs: Linda, who is extremely clever, very enthusiastic and always available to discuss science with me, and Ilona, who is an excellent organizer, always brings joy to the people around her, and provides the voice of reason whenever I am in a difficult situation. You are both very dear to me, we really had, and still have, an awesome time together.

I want to thank my office mates: Angie, Maik and Helle, with whom I spend a lot of time working hard and chatting about anything and everything. I couldn't have asked for a better direct working environment. Thank you also to the people who hopped by my office regularly such as Berfin, Laura and Annika, who kept me off my work sometimes, but always made my work and breaks more enjoyable. I want to thank the people from my cohort, Aline, Jinqiu, Feiyan, Yu, Lu and Mohammed, who rode the PhD rollercoaster together with me and made it a fun and interesting ride.

I want to thank all my collaborators who I got to work with, and especially Parth, Gabriel, Thomas and Tingjie. I want to thank Solomiia for creating and coordinating the course together, and also being a good friend.

I would like to thank my other colleagues Rob, Bas, Sinzi, Swantje, Elke, Carla, Chun, Marinda, An Duc, Cathy, Yuchen, Suruchi, Sebastian, Jorn, Dirk-Jan, my colleagues from the DSO, my football team Mathletico, and all others I got the pleasure to spend my time with. I would also like to thank the students I supervised, that have all been inspiring and a lot of fun to collaborate to with.

Lastly, I would like to thank people outside of my work. Of course Patrick, with whom I build a home and who has always helped me maintain a healthy work life balance. Thank you to my family and Patrick's family for the amazing support and love. Thank you to my friends and my football team for generally increasing my level of happiness.
