Lava Worlds

Characterising atmospheres of impossible nature

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op donderdag 24 mei 2023
klokke 13:45 uur
door

Mantas Žilinskas

geboren te Šilute, Lithuania
in 1993

Promotor: Prof. dr. I.A.G. Snellen

Co-Promotor Dr. Y. Miguel

Promotiecommissie:

Prof. dr. S. Viti

Prof. dr. Simon F. Portegies Zwart

Prof. dr. Laura Kreidberg MPIA, Heidelberg

Prof. dr. Nicolas B. Cowan McGill University

Dr. Jean-Michel L.B. Desert University of Amsterdam

ISBN: 978-94-6419-788-4

Cover and chapters illustrated by the author

Cultivate a sense of wonder and awe at the beauty and mystery
of the universe, and seek to understand our place in it.

Mamai

CONTENTS

1	Introduction	1
1.1	The Solar System	1
1.2	A cosmic zoo of exoplanets	2
1.3	Measuring other worlds	4
1.3.1	Methods of detection	4
1.3.2	Atmospheric chemistry as a fingerprint	5
1.4	Simulating an atmosphere	8
1.4.1	The thermal structure	9
1.4.2	Solving the chemistry	10
1.5	This thesis	12
2	Atmospheric compositions and observability of nitrogen dominated ultra-short period super-Earths	15
2.1	Introduction	17
2.2	Methods	18
2.2.1	Model Parameters	18
2.2.2	Chemical Models	21
2.2.3	Synthetic Spectra	22
2.3	Results	25
2.3.1	Chemistry	25
2.3.2	Synthetic Spectra	31
2.4	Discussion	41
2.4.1	C/O & Graphite Formation	41
2.4.2	Impact of Hydrogen Depletion	42
2.4.3	Future Observability of Super-Earths	43
2.5	Conclusion	44
3	Temperature inversions on hot super-Earths: the case of CN in nitrogen-rich atmospheres	49
3.1	Introduction	51
3.2	Methods	52
3.2.1	Planetary parameters and initial compositions	52
3.2.2	Temperature profiles	53
3.2.3	Chemical evolution	54
3.2.4	Synthetic emission spectra	55
3.3	Results	55

3.3.1	Temperature inversions	55
3.3.2	Effect of temperature inversions on atmospheric chemistry	58
3.3.3	Emission via secondary eclipse	62
3.4	Discussion	67
3.5	Conclusion	68
4	Observability of Evaporating Lava Worlds	73
4.1	Introduction	75
4.2	Methods	76
4.2.1	Outgassed chemistry	76
4.2.2	Temperature structure	78
4.2.3	Synthetic emission spectra	79
4.3	Results	80
4.3.1	Bulk silicate earth atmospheres	80
4.3.2	Evolved atmospheres	89
4.3.3	Atmospheres of varying melt compositions	90
4.4	Discussion	95
4.4.1	Characterising lava worlds	95
4.4.2	Melts and interiors	97
4.4.3	Limitations of 1D equilibrium models	98
4.5	Conclusions	98
	Appendices	101
4.A	Opacity Data	101
4.B	Evolution of Atmospheric Abundances	102
5	Observability of silicates in volatile atmospheres of super-Earths and sub-Neptunes	
	- Exploring the edge of the evaporation desert -	105
5.1	Introduction	107
5.2	Methods	109
5.2.1	Setting up the system	109
5.2.2	Determining the chemistry	109
5.2.3	Computing thermal profiles	110
5.2.4	Simulating emission spectra	111
5.3	Results	112
5.3.1	Outgassed silicates in hydrogen atmospheres	112
5.3.2	Contribution function	114
5.3.3	Impact of metallicity and C/O ratio	115
5.3.4	Keeping the C/O ratio constant with metallicity	118
5.3.5	Effect of increased surface pressure and internal heating	121
5.3.6	Depletion of hydrogen	123
5.3.7	Observability of currently known targets	124
5.4	Discussion	127
5.4.1	Importance of heat redistribution and stellar type	127
5.5	Conclusion	129
	Appendices	132

5.A Opacity Data	132
Bibliography	133
English summary	147
Nederlandse samenvatting	153
Lietuviška santrauka	159
Publications	163
Curriculum Vitae	165
Acknowledgements	168
