# Surface temperature and the dynamics of $H_2$ on Cu(111)

Proefschrift

ter verkrijging van
de graad van doctor aan de Universiteit Leiden,
op gezag van rector magnificus prof.dr.ir. H. Bijl,
volgens besluit van het college voor promoties
te verdedigen op dinsdag 4 juli 2023
klokke 11:15 uur

door

Bauke Smits
geboren te Zuidland
in 1994

**Promotor:** Prof.dr. G.-J. Kroes

**Co-promotor:** Dr. M.F. Somers

**Promotiecommissie:**

Prof.dr. M. Ubbink
Prof.dr. S.A. Bonnet
Prof.em.dr. M.C. van Hemert
Dr. A.L.M. Lamberts
Prof.dr. G.N. Alexandrowicz (Swansea University)
Prof.dr. D.A. Auerbach (Max Planck Institute for Biophysical Chemistry)

ISBN: 978-94-6473-146-0

The research reported in this thesis has been performed in the Theoretical Chemistry group at the Leiden Institute of Chemistry (Einsteinweg 55, 2333 CC, Leiden, the Netherlands). This work has been made possible with computer time granted by the Physical Sciences division of NWO (NWO-EW).

# Contents

**1 Introduction** **1**
1.1 Heterogeneous catalysis . . . . . 1
1.2 Hydrogen scattering from metal surfaces . . . . . 3
1.3 Aim and scope of this thesis . . . . . 8
1.4 Main results . . . . . 9
1.5 Outlook . . . . . 13

**2 Methods** **25**
2.1 Quantum dynamics . . . . . 25
2.1.1 Solving the electronic Schrödinger equation . . . . . 27
Density functional theory . . . . . 27
Specific reaction parameter approach to DFT . . . . . 29
2.1.2 Potential energy surface fitting . . . . . 30
2.1.3 Solving the nuclear Schrödinger equation . . . . . 31
Time-dependent wave packet approach . . . . . 31
The initial wave-packet . . . . . 32
Representing the wave-packet . . . . . 33
Fourier representation . . . . . 33
Propagating the wave-packet . . . . . 34
Analysing the wave-packet . . . . . 35
Absorbing the wave-packet . . . . . 36
2.2 Classical dynamics . . . . . 36
2.2.1 Quasi-classical dynamics . . . . . 38
2.2.2 Initial state selection . . . . . 38
2.2.3 Integration methods . . . . . 39
Bulirsch-Stoer . . . . . 39

Velocity-Verlet . . . 39
2.2.4 Final state binning . . . 40
2.3 Potentials for surface displacements . . . 41
2.3.1 Static corrugation model . . . 41
Thermally distorted surface generation . . . 44
2.3.2 Embedded-atom method . . . 45
2.3.3 Dynamic corrugation model . . . 45
2.4 Computation of other observables . . . 46
2.4.1 Rotational quadrupole alignment parameter . . . 46
2.4.2 Simulating time-of-flight spectra . . . 47
2.4.3 Threshold offset and efficacies . . . 49

**3 Beyond the static corrugation model 57**
3.1 Introduction . . . 58
3.2 Method . . . 60
3.2.1 Bulk lattice constant determination . . . 61
3.2.2 Surface slab generation . . . 62
3.3 Results and discussion . . . 63
3.3.1 Reaction probability curves . . . 63
3.3.2 (In-)elastic scattering probabilities . . . 64
3.3.3 Simulated time-of-flight spectra . . . 67
3.3.4 Effect of RD-SCM on atom displacement . . . 69
3.4 Conclusion . . . 73

**4 Quantum dynamical surface temperature effects on the dissociative chemisorption of $H_2$ from Cu(111) 81**
4.1 Introduction . . . 82
4.2 Method . . . 84
4.2.1 Quantum dynamics . . . 85
4.2.2 Quasi-classical dynamics . . . 86
4.2.3 Limited atom static corrugation model . . . 87
4.3 Results and discussion . . . 87
4.3.1 Constrained results . . . 88
4.3.2 Dissociative chemisorption and rovibrationally elastic scattering . . . 91
4.3.3 Limited surface atom degrees of freedom . . . 94
4.4 Conclusion . . . 95

**5 The quantum dynamics of $H_2$ on Cu(111) at a surface temperature of 925 K: Comparing theory to experiments 105**
5.1 Introduction . . . 106
5.2 Method . . . 108
5.2.1 Quantum dyanmics . . . 108
5.2.2 Final state binning . . . 109
5.2.3 Comparisons to experiment . . . 110
5.3 Results and discussion . . . 111
5.3.1 Rovibrationally excited states and a dynamic surface . 111
5.3.2 Binning methods explored . . . 113
5.3.3 Comparisons to experiment . . . 118
5.3.4 Logscale results . . . 121
5.4 Conclusion . . . 125

**6 The quantum dynamics of $H_2$ on Cu(111) at a surface temperature of 925 K: Comparing theory to experiments 2 133**
6.1 Introduction . . . 134
6.2 Methods . . . 136
6.2.1 Quantum dynamics . . . 136
6.2.2 Rotational quadrupole alignment parameter . . . 137
6.2.3 Simulating time-of-flight spectra . . . 138
6.2.4 Threshold offset and efficacies . . . 139
6.3 Results and Discussion . . . 139
6.3.1 Effect of QD time step . . . 139
6.3.2 Barrier shape and location . . . 142
6.3.3 Time-of-flight spectra and fitted parameters . . . 145
6.3.4 Rotational and vibrational efficacies . . . 150
6.3.5 Rotational quadrupole alignment parameter . . . 154
6.4 Conclusion . . . 157
6.A Appendix: Additional computational details . . . 159
